## **COMMISSION STAFF WORKING DOCUMENT**

**Fiscal Statistical Tables providing background data relevant for the assessment of the  
budgetary policies of the Member States**

*Accompanying the document*

### **RECOMMENDATION FOR A COUNCIL RECOMMENDATION**

**on the 2026 economic, social, employment, structural and budgetary policies of Belgium,  
Bulgaria, Czechia, Denmark, Germany, Estonia, Ireland, Greece, Spain, France,  
Croatia, Italy, Cyprus, Latvia, Lithuania, Luxembourg, Hungary, Malta, the  
Netherlands, Austria, Poland, Portugal, Romania, Slovenia, Slovakia, Finland and  
Sweden**

{COM(2026) 201-227 final}

This document contains tables that provide relevant background data for the assessment of the budgetary policies of Member States made in spring 2026.

With the reform of the economic governance framework (1), fiscal surveillance in the EU focusses on one single operational indicator, namely net nationally financed primary expenditure or 'net expenditure'. Box 1 explains the derivation of this new indicator and of the control account, which is set up by the Commission to keep track of observed annual and cumulative upward and downward deviations of net expenditure from the path recommended by the Council.

For all Member States, this Staff Working Document includes a set of tables in the order listed below(2). For most tables, the projections from the Annual Progress Reports (APRs)(3) submitted by the Member States are shown side-by-side with those of the Commission Spring 2026 Forecast(4).

**Table 1 (Key macroeconomic and fiscal figures)** shows main macroeconomic variables, including real GDP growth and HICP inflation, and main fiscal variables. The table also reports the European Commission's estimate of the fiscal stance indicator and its components. The indicator measures the short-term impulse to the economy from discretionary fiscal policy (nationally financed, as well as financed by EU grants). See Box 2 for more information.

**Table 2 (Net expenditure growth)** recalls the most recent maximum net expenditure growth rates recommended by the Council to the Member State, as well as the outturn (for 2025) and forecast (for 2026 and 2027) of net expenditure growth.

**Table 3 (Macroeconomic developments and forecasts)** shows the main macroeconomic data, including real GDP growth and its components, the output gap, employment, unemployment, labour productivity, HICP inflation, the GDP deflator, compensation of employees, and net borrowing/lending vis-à-vis the rest of the world.

**Table 4 (General government budgetary position)** shows data on the main general government revenue and expenditure components.

**Table 5 (Debt developments)** shows the evolution of general government debt and provides a breakdown of the change in the debt-to-GDP ratio based on the contributions of the primary

---

(1) Regulation 2024/1263 of the European Parliament and of the Council (EU) on the effective coordination of economic policies and on multilateral budgetary surveillance, together with the amended Regulation (EC) No 1467/97 on the implementation of the excessive deficit procedure and the amended Council Directive 2011/85/EU on the budgetary frameworks of Member States are the core elements of the reformed EU economic governance framework.

(2) For some Member States particular tables are not available so the numbering in the country sections might differ from the one presented in this section.

(3) The APRs can be found here: [https://economy-finance.ec.europa.eu/economic-governance-framework/stability-and-growth-pact/preventive-arm/annual-progress-reports\\_en](https://economy-finance.ec.europa.eu/economic-governance-framework/stability-and-growth-pact/preventive-arm/annual-progress-reports_en)

(4) Spring 2026 Economic Forecast can be found here: [https://economy-finance.ec.europa.eu/economic-forecast-and-surveys/economic-forecasts/spring-2026-economic-forecast-slowdown-growth-energy-shock-drives-inflation\\_en](https://economy-finance.ec.europa.eu/economic-forecast-and-surveys/economic-forecasts/spring-2026-economic-forecast-slowdown-growth-energy-shock-drives-inflation_en)

balance, the ‘snow-ball effect’ (reflecting the relationship between nominal GDP growth and interest expenditure) and the stock-flow adjustment (that is, other factors that have an impact on general government debt, such as differences between cash and accrual recording, or the net accumulation of financial assets).

**Table 6 (Assessment of compliance)** provides background data to assess compliance of Member States with the recommended net expenditure growth. **Panel A (Net expenditure, annual and cumulated deviations vis-à-vis the current recommendation)** of the table is provided for all Member States. The panel offers a detailed derivation of net expenditure as calculated on the basis of the Commission Spring 2026 Forecast, as well as the annual and cumulated deviations from the most recent recommended maximum net expenditure path. See Box 1 for more information. The annual and cumulated deviations from the recommended maximum net expenditure growth rates until 2025 (included) correspond to the control account balances as referred to in Article 22 of Regulation (EU) 2024/1263. **Panel B** of Table 6 (**Defence expenditure and the national escape clause**) is only included for those Member States which benefit from the flexibility under the national escape clause for defence expenditure. In such case, the table presents the deviations from the recommended maximum growth rates of net expenditure after considering the flexibility from the national escape clause. For outturn data, the balance corresponds to the augmented control account (cumulated balance after flexibility, see Box 1).

In cases where the net expenditure path was recently superseded (Ireland, Finland) or is projected to be superseded (the Netherlands) by a new net expenditure path, a similar table (**Net expenditure, annual and cumulated deviations vis-à-vis the previous recommendation**) also provides the deviations from the previous path until 2025 (included)<sup>(5)</sup>. Similarly, **panel B** is provided for Finland, as it benefitted from the flexibility provided by the national escape clause for defence expenditure under the previous recommendation.

**Table 7 (Recovery and Resilience Facility – Grants)** presents data on grants from the Recovery and Resilience Facility as reported by the Member States in the Annual Progress Reports, their cash disbursements and the expenditure categories (or other costs) financed by those grants<sup>(6)</sup>.

**Table 8 (Recovery and Resilience Facility – Loans)**, where applicable, presents data on cash disbursements and repayments of loans from/to the Recovery and Resilience Facility as reported by the Member States in the Annual Progress Reports.

The Fiscal Statistical Tables are complemented by three thematic boxes:

**Box 1 (Derivation of the net expenditure indicator and of the control account)** offers a derivation of ‘net expenditure’ and explains how the control account of the Stability and Growth Pact is operationalised. The control account tracks deviations from the recommended net expenditure path, taking into account, where relevant, the flexibility granted under the national escape clause for defence. The control account underpins the conclusions of the Commission’s assessment of EU Member States’ fiscal developments.

**Box 2 (Derivation of the indicator of the fiscal stance)** provides details on the definition of the fiscal stance and its components.

---

<sup>(5)</sup> This is Table 7 for Ireland, the Netherlands and Finland.

<sup>(6)</sup> This is Table 8 for Ireland, the Netherlands and Finland.

**Box 3 (Statistical recording of Recovery and Resilience Facility-related flows)** summarises the fundamental principles underlying the recording of these transactions.

### Box 1 Derivation of the net expenditure indicator and of the control account

Tables 2 and 6 monitor the growth rate of net nationally financed primary expenditure ‘ $\Delta NNPE_t$ ’ or ‘net expenditure’. With the entry into force of the new economic governance framework on 30 April 2024, net expenditure has become the new single indicator for fiscal surveillance. Article 2(2) of Regulation (EU) 2024/1263 defines net expenditure as government expenditure net of interest expenditure, discretionary revenue measures, expenditure on programmes of the Union fully matched by revenue from Union funds, national expenditure on co-financing of programmes funded by the Union, cyclical elements of unemployment benefit expenditure, and one-off measures.

The growth rate of net expenditure is calculated in four steps:

1. Calculating the absolute level of the net expenditure aggregate (before discretionary revenue measures) for a given year (line 7 of Table 6, panel A)(7).

$$NPE_t = E_t - I_t - U_t - E_t^{EU\ funded} - E_t^{nat.\ cofinanced} - Oneoff_t^E$$

By deducting estimates for the cyclical component of unemployment benefits, an important element of expenditure driven by the business cycle is excluded. EU-funded expenditure is excluded as it has no impact on the government deficit or on debt sustainability. Nationally co-financed expenditure is also excluded. By definition, one-off expenditures have only a transitory budgetary effect and hence do not lead to a sustained change in the budgetary position.

2. Calculating the absolute change in net expenditure (before discretionary revenue measures) between two years (line 8 of Table 6).

$$\Delta NPE_t = NPE_t - NPE_{t-1}$$

In some cases, when there is a break in the time series of the net expenditure aggregate this step also involves a correction for such a break.(8)

3. Deducting the incremental impact of discretionary revenue measures excluding one-off revenue measures to arrive at the absolute change in net expenditure (after discretionary revenue measures) (line 10 in Table 6).

$$\Delta NPE_t^* = \Delta NPE_t - \Delta DRM_t + \Delta Oneoff_t^R$$

The deduction of discretionary revenue measures works in two directions: measures that increase revenue have a dampening effect on net expenditure, while measures that lead to decreased revenue increase net expenditure. The calculation also excludes discretionary measures that can be qualified as one-off, as the latter have only a transitory budgetary effect and hence do not lead to a sustained change in the budgetary position. Finally, discretionary

(7) The steps described here are presented for all Member States vis-à-vis their current recommendation, and also vis-à-vis their previous recommendation if their recommended net expenditure was recently superseded (Ireland, the Netherlands and Finland; see table 7 for these countries).

(8) A typical example would be a reclassification of an institutional unit inside (or outside) general government. A reclassification inside (outside) general government in a given year would typically imply a sudden increase (decrease) in government expenditure in this year. Since this is merely a statistical artefact resulting from broadening (narrowing) the government perimeter in that year, this should therefore not be seen as resulting from more (less) dynamic government expenditures.

revenue measures only refer to revenue measures that are not compensated by EU grants.

4. Calculating the growth rate of net expenditure by comparing the change with the starting level of net expenditure (before discretionary revenue measures) in t-1 (line 11 of Table 6).

$$\text{growth rate } (NPE_t^*) = \frac{\Delta NPE_t^*}{NPE_{t-1}} * 100$$

$NPE_t$	Net nationally financed primary expenditure (before discretionary revenue measures)
$\Delta NPE_t^*$	Absolute change in net nationally financed primary expenditure (after discretionary revenue measures)
$E_t$	General government total expenditure
$I_t$	Interest expenditure
$U_t$	Cyclical elements of unemployment benefit expenditure
$E_t^{EU \text{ funded}}$	Expenditure on programmes of the Union fully matched by revenue from Union funds
$E_t^{nat. \text{ cofinanced}}$	National co-financing of EU programmes
$\Delta DRM_t$	Discretionary revenue measures (incremental impact, excluding revenue measures compensated by EU grants)
$Oneoff_t$	One-off measures (revenue or expenditure, indicated by superscript <i>R</i> or <i>E</i> respectively, impact in levels)

The annual growth rates of net expenditure calculated this way are then compared to the recommended growth rates of net expenditure (Line 12), as per the Council recommendation. The difference between these two growth rates is multiplied by the level of the previous year's net expenditure aggregate before the annual incremental impact of DRMs is taken into account (Line 7), thus expressing the annual deviation in national currency (Line 13). The cumulative deviation (Line 14) is derived by adding annual deviations in national currency. A positive (negative) deviation indicates that net expenditure is above (below) the recommended maximum net expenditure path. The annual deviation (Line 13) is divided by the nominal GDP level (Line 17). The reporting of the balances in terms of percentage of nominal GDP follows the provision of the underlying legislation.

The cumulated deviation in national currency (Line 14) is equal to the previous year's cumulated deviation plus the current year's annual deviation (Line 13). The cumulated balance (Line 16) is then equal to the cumulated deviation (Line 14) divided by the level of nominal GDP of the last year (Line 17). This methodology ensures the additivity of the annual deviations in national currency<sup>(9)</sup>. Deviations from the recommended maximum annual and cumulative growth rates of net expenditure are recorded in annual and cumulated terms since the base year of the relevant recommendation. Positive deviations are compared to the thresholds of 0.3% of GDP in annual terms and 0.6% of GDP in cumulated terms in line with Article 2(2) of the amended Regulation (EC) No 1467/97.

The observed deviations (i.e. those that are based on outturn data) presented in Table 6, correspond to the 'control account', as described in Article 22 of Regulation 2024/1263. The control account keeps track of cumulative upward and downward deviations of observed net expenditure from the net expenditure path as set by the Council, based on outturn data. In addition, Table 6 also presents the projected deviations implied by the Commission forecast.

<sup>(9)</sup> Small differences could emerge between the sum of the annual balances and the cumulated balance (expressed in % GDP) of the control account due to GDP developments (leading to changes in the denominator).

For Member States for which the national escape clause is activated by the Council, the Commission also calculates an augmented control account. It identifies all deviations from the recommended net expenditure path but only registers as debits those deviations that exceed the flexibility under the national escape clause. For these Member States, the Commission applies a two-step approach in its fiscal assessments<sup>(10)</sup>:

1. In a first step, the deviations from the recommended maximum net expenditure path are calculated as presented above.
2. In case of an upward deviation from the recommended net expenditure path, in a second step, the Commission examines whether this deviation is allowed under the conditions of the national escape clause for defence. The flexibility under the national escape clause allows deviations from the recommended maximum growth of net expenditure corresponding to the increase in defence expenditure<sup>(11)</sup> compared to the reference year, up to 1.5% of GDP over the period 2025 to 2028. Upward deviations from the recommended expenditure path beyond what the national escape clause allows are registered as debits<sup>(12)</sup>.

For Member States that benefit from flexibility under the national escape clause and that observe positive deviations in their annual or cumulated balances of the control account or in the projected balances going forward, panel B of Table 6 (Defence expenditure and the national escape clause) present the cumulated balance after flexibility. The observed deviations after flexibility (i.e. those that are based on outturn data) correspond to the 'augmented control account'. Panel B of Table 6 also presents the projected deviations after flexibility implied by the Commission forecast<sup>(13)</sup>.

As explained above, for Member States where the recommended maximum net expenditure path has recently been superseded (or is projected to be superseded) by a new Council recommendation, these fiscal statistical tables include two Tables assessing compliance. Table 6 presents the deviations against the maximum net expenditure path as set by the most recent Council recommendation and is therefore mainly forward looking. Table 7 presents an *ex post* assessment of the deviations against the previous recommendation, and is therefore entirely backward looking. For simplicity, Table 2 only shows the most recent Council recommendation.

## **Box 2 Derivation of the indicator of the fiscal stance**

Traditionally, the fiscal stance is defined as a measure of the annual change in the underlying budgetary position of the general government. It may serve to assess the impact of fiscal policy on an economy's aggregate demand, as well as the speed at which the underlying budgetary

<sup>(10)</sup> The steps described here are presented for those Member States which under the current recommendation benefit from the national escape clause (panel B of Table 6) and for those Member States that have also benefitted from the national escape clause under their previous recommendation (panel B of Table 7).

<sup>(11)</sup> The defence spending relevant to the assessment of compliance is the nationally financed defence expenditure as defined in the classification of the functions of government (COFOG02).

<sup>(12)</sup> In the augmented control account only the accumulated deviations matter and are compared to the threshold of 0.6% of GDP.

<sup>(13)</sup> Panel B of Table 6 presents calculations related to the national escape clause vis-à-vis the current recommendation while panel B of Table 7 for Finland vis-à-vis the previous recommendation.

position converges towards budgetary targets. Using the same indicator to gauge two different concepts was appropriate under the assumption that government expenditure was funded by national revenue sources and debt-financing, without large external transfers. However, in the presence of sizeable transfers from the EU budget (such as those from the Recovery and Resilience Facility or other EU grants), conventional indicators do not fully capture the additional fiscal impulse provided by the EU budget, as the related expenditure is offset by matching revenue from the EU.

The fiscal stance reported in Table 1 for each Member State aims to assess the economic impulse stemming from fiscal policies, both those that are nationally financed and those that are financed by the EU budget. It measures the change in general government primary expenditure, net of the incremental impact of discretionary revenue measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by Recovery and Resilience Facility grants and other EU funds, relative to the medium-term (10-year) average potential GDP growth rate, in nominal terms. A negative (positive) sign indicates an excess (shortfall) of primary expenditure growth over medium-term potential GDP growth, which corresponds to an expansionary (contractionary) fiscal stance.

$$Fiscal\ Stance_t = \frac{(1+Pot_t) \cdot (1+\pi_t) \cdot NE_{t-1} - (NE_t - \Delta DRM_t + \Delta Oneoff_t^R)}{GDP_t}$$

Where ' $Pot_t$ ' is the medium-term (10-year) average potential GDP growth rate, ' $\pi_t$ ' is the GDP deflator, and  $NE_t = E_t - I_t - U_t - Oneoff_t^E$ , in a given year ' $t$ '.

The expenditure aggregate ' $NE_t$ ' comprises primary expenditure (total expenditure ' $E_t$ ' less interest expenditure ' $I_t$ '), net of cyclical unemployment benefits ' $U_t$ ' and one-off expenditure ' $Oneoff_t^E$ ', in a given year ' $t$ '. In turn, ' $\Delta DRM_t$ ' and  $\Delta Oneoff_t^R$ ' stand for the incremental budgetary impact of discretionary revenue measures and one-off revenue measures revenue, in a given year ' $t$ '.

### Box 3 Statistical recording of Recovery and Resilience Facility-related flows

Eurostat has issued guidance on the statistical recording of flows related to the Recovery and Resilience Facility (RRF).<sup>(14)</sup> The following fundamental principles guide the statistical recording of RRF-related flows:

- **RRF grants are recorded by matching the time of recording of revenue from the EU with the time of recording of expenditure financed by these grants.** This is irrespective of the timing of disbursements or pre-financing. This approach is by analogy to the recording of the traditional EU-fund related flows and it is often referred to as the '*principle of neutrality of EU flows*'. It ensures that timing differences - leads or lags - between disbursements and concrete spending do not have an effect on the government balance. This principle is well established, including in the ESA 2010 Regulation.
- **The government sector is the counterpart of the RRF grants.** While some RRF grants may ultimately be channelled to non-governmental entities in the form of subsidies

<sup>(14)</sup> ['Guidance note on the statistical recording of the Recovery and Resilience Facility'](#), Eurostat, September 2021.

and/or transfers, the RRF Regulation establishes that the financing applies at the level of payments from the European Commission to the Member States as beneficiaries, irrespective of the further use of the RRF funds. This is somewhat different from the statistical recording of other EU fund-related flows, where the beneficiary, for national accounts purposes, can be either the government or a non-governmental entity.

- **Loans extended by the RRF to a Member State add to its government's debt.** At the same time, borrowing taken out by the European Commission to finance RRF grants is considered as EU debt and, therefore, it is not attributed to the Member States.

In the Fiscal Statistical Tables, these fundamental principles underlie the statistical reporting of RRF-related flows as presented in Table 1 (Key macroeconomic and fiscal figures, as far as the fiscal stance is concerned), Table 4 (General government budgetary position), Table 6 (Net expenditure, annual and cumulated deviations vis-à-vis the recommendation)<sup>(15)</sup>, Table 7 (Recovery and Resilience Facility – Grants), and, where applicable, also in Table 8 (Recovery and Resilience Facility – Loans).

**Recent RRP revisions may have led to changes in the measures funded by RRF grants and loans.** Existing measures may have changed from loan to grant funding (or the other way around), new measures may have been added for grant or loan funding, while others may have been removed. In several cases, these changes also apply to expenditures that already took place in previous years. For the retroactively introduced expenditure funded from RRF grants, the corresponding revenue from the EU is recorded as a one-off revenue at the time of Council adoption of implementing decisions approving RRP amendments (i.e. in 2025 or 2026). On the other hand, for expenditure previously funded by RRF grants, which is retroactively removed from the RRP, a one-off expenditure is recorded at the time of the Council adoption of the implementing decision.

---

<sup>(15)</sup> Including in the additional Table 7 for Ireland, the Netherlands and Finland, on deviations of net expenditure vis-à-vis the previous recommendation.

#### B. Defence expenditure and the national escape clause vis-à-vis the current recommendation

	Variables		Reference level***	2024	2025	2026	2027
			Outturn	Outturn	COM	COM	
1	Total defence expenditure (nationally financed)	% GDP	2.2	2.2	2.4	2.6	2.5
2	Flexibility from increases in defence expenditure	% GDP		n.a.	0.2	0.4	0.3
3	Cumulated balance after flexibility**	% GDP		n.a.	-1.5	-0.2	-0.2

\* The growth rate for 2024 is not a recommendation but serves to anchor the base, as the latest year with outturn data when setting the net expenditure path was 2023.

\*\* A positive (negative) value indicates that net expenditure is above (below) the recommended maximum growth rate (in panel B taking into account the flexibility from the national escape clause).

\*\*\* The reference level corresponds to nationally financed defence expenditure (CCFC02) in 2024 as % of GDP.

#### B. Defence expenditure and the national escape clause vis-à-vis the current recommendation

	Variables		Reference level****	2024	2025	2026	2027
				Outturn	Outturn	COM	COM
1	Total defence expenditure (nationally financed)	% GDP	<b>0.9</b>	0.9	1.0	1.2	1.4
2	Flexibility from increases in defence expenditure	% GDP		n.a.	0.1	0.3	0.5
3	<b>Cumulated balance after flexibility***</b>	<b>% GDP</b>		<b>n.a.</b>	<b>-0.1</b>	<b>0.4</b>	<b>0.7</b>

On 13 April 2026 Spain requested to activate the national escape clause allowing Spain to deviate from the recommended maximum growth rates of net expenditure. Table 6 (panel B) for Spain includes calculation of the augmented control account, identifying deviations from the recommended net expenditure path under the national escape clause.

\* The change in net expenditure in 2025 has been corrected by EUR287 m for a break in the series of total expenditure, related to the reclassification of Hsdssat Servicios Estratégicos into general government from 2025 onwards.

\*\* The growth rate for 2024 is not a recommendation but serves to anchor the base, as the latest year with outturn data when setting the net expenditure path was 2023.

\*\*\* A positive (negative) value indicates that net expenditure is above (below) the recommended maximum growth rate (in panel B taking into account the flexibility from the national escape clause).

\*\*\*\* The reference level corresponds to nationally financed defence expenditure (CCFCG02) in 2024 as % of GDP.

#### B. Defence expenditure and the national escape clause vis-à-vis the current recommendation

	Variables		Reference level***	2024	2025	2026	2027
				Outturn	Outturn	COM	COM
1	Total defence expenditure (nationally financed)	% GDP	2.5	2.7	3.2	4.1	5.5
2	Flexibility from increases in defence expenditure	% GDP		n.a.	0.7	1.5	1.5
3	Cumulated balance after flexibility**	% GDP		n.a.	-2.6	-2.1	-0.9

\* The growth rate for 2024 is not a recommendation but serves to anchor the base, as the latest year with outturn data when setting the net expenditure path was 2023.

\*\* A positive (negative) value indicates that net expenditure is above (below) the recommended maximum growth rate (in panel B, taking into account the flexibility from the national escape clause).

\*\*\* The reference level corresponds to nationally financed defence expenditure (COFOG02) in 2021 as % of GDP.

The data for the outturn years reported in lines 15 and 16 correspond to control account deviations as referred to in Art. 22 of REGULATION (EU) 2024/1263.

#### B. Defence expenditure and the national escape clause vis-à-vis the current recommendation

	Variables		Reference level**	2025	2026	2027
				Outturn	COM	COM
1	Total defence expenditure (nationally financed)	% GDP	<b>1.4</b>	2.7	2.9	3.5
2	Flexibility from increases in defence expenditure	% GDP		1.2	1.5	1.5
3	<b>Cumulated balance after flexibility*</b>	% GDP		<b>0.3</b>	<b>0.7</b>	<b>1.4</b>

\* A positive (negative) value indicates that net expenditure is above (below) the recommended maximum growth rate (in panel B taking into account the flexibility from the national escape clause).

\*\* The reference level corresponds to nationally financed defence expenditure (COFOG02) in 2021 as % of GDP

The data for the outturn years reported in lines 15 and 16 correspond to control account deviations as referred to in Art. 22 of REGULATION (EU) 2024/1263.

8	Stock-flow adjustment	1.1	n.a.	-1.6	n.a.	-0.2

\* The 'snow-ball' effect captures the impact of interest expenditure on accumulated general government debt, as well as the impact of real GDP growth and inflation on the general government debt-to-GDP ratio (through the denominator). The stock-flow adjustment includes differences in cash and accrual accounting (including leads and lags in Recovery and Resilience Facility grant disbursements), accumulation of financial assets, and valuation and other residual effects.

#### B. Defence expenditure and the national escape clause vis-à-vis the current recommendation

	Variables		Reference level***	2024	2025	2026
				Outturn	Outturn	COM
1	Total defence expenditure (nationally financed)	% GDP	1.0	2.0	1.8	2.1
2	Flexibility from increases in defence expenditure	% GDP		n.a.	0.8	1.1
3	Cumulated balance after flexibility**	% GDP		n.a.	0.0	1.9

\* The growth rate for 2024 is not a recommendation but serves to anchor the base, as the latest year with outturn data when setting the net expenditure path was 2023.

\*\* A positive (negative) value indicates that net expenditure is above (below) the recommended maximum growth rate (in panel B, taking into account the flexibility from the national escape clause).

\*\*\* The reference level corresponds to nationally financed defence expenditure (COFOG02) in 2021 as % of GDP.

The data for the outturn years reported in lines 15 and 16 correspond to control account deviations as referred to in Art. 22 of REGULATION (EU) 2024/1263.

Assessment vis-à-vis Council Recommendation of 21 January 2025 setting the net expenditure path of the Netherlands

\* The growth rate for 2024 is not a recommendation but serves to anchor the base, as the latest year with outturn data when setting the net expenditure path was 2023.

\*\* A positive (negative) value indicates that net expenditure is above (below) the recommended maximum growth rate.

The data for the outturn years reported in lines 15 and 16 correspond to control account deviations as referred to in Art. 22 of REGULATION (EU) 2024/1263.

#### B. Defence expenditure and the national escape clause vis-à-vis the current recommendation

	Variables		Reference level****	2024	2025	2026	2027
				Outturn	Outturn	COM	COM
1	Total defence expenditure (nationally financed)	% GDP	1.1	1.4	1.3	1.6	1.8
2	Flexibility from increases in defence expenditure	% GDP		n.a.	0.2	0.5	0.7
3	<b>Cumulated balance after flexibility***</b>	<b>% GDP</b>		<b>n.a.</b>	<b>0.3</b>	<b>1.2</b>	<b>1.4</b>

\* The change in net expenditure in 2025 has been corrected by EUR535 m for a break in the series of total expenditure, related to the reclassification of the Velenje Coal Mine and Sostanj Thermal Power Plant into general government from 2025 onwards.

\*\* The growth rate for 2024 is not a recommendation but serves to anchor the base, as the latest year with outturn data when setting the net expenditure path was 2023.

\*\*\* A positive (negative) value indicates that net expenditure is above (below) the recommended maximum growth rate (in panel B) taking into account the flexibility from the national escape clause.

\*\*\*\* The reference level corresponds to nationally financed defence expenditure (COF002) in 2021 as % of GDP.

2	Flexibility from increases in defence expenditure	% GDP		0.5	1.4	1.3
3	Cumulated balance after flexibility**	% GDP		-1.6	-0.9	0.2

Assessment vis-à-vis Council Recommendation with a view to bringing an end to the situation of an excessive deficit in Finland, adopted on 20 January 2026.

\* The growth rate for 2025 is not a recommendation but serves to anchor the base, as the latest year with outturn data when setting the net expenditure path was 2024.

\*\* A positive (negative) value indicates that net expenditure is above (below) the recommended maximum growth rate (in panels B, taking into account the flexibility from the national escape clause).

\*\*\* The reference level corresponds to nationally financed defence expenditure (CCFOG02) in 2021 as % of GDP.

The data for the outturn years reported in lines 15 and 16 correspond to control account deviations as referred to in Art. 22 of REGULATION (EU) 2024/1263.
