NOTE

From:	Presidency
To:	Delegations
No. Cion doc.:	9471/21
Subject:	Proposal for a Regulation of the European Parliament and of the Council amending Regulation (EU) No 910/2014 as regards establishing a framework for a European Digital Identity - Preparations ahead of the trilogue

1. An opening political trilogue was held under the Swedish Presidency on 21 March, in which the technical level was mandated to work on the entire proposal. Nine technical discussions took place in preparation of a second trilateral meeting at political level, which was held on 23 May and aimed at addressing some of the outstanding issues, namely the obligations for relying parties and a new governance section, both elements proposed by the EP.

2. Five additional technical meetings have taken place in the meantime in a collaborative atmosphere. A third political trilogue is scheduled on 28 June.

3. In the ANNEX below, the amendments made by the EP and the Council on the text of the proposal compared to the Commission's proposal are found in the fourth column ("Draft Agreement") and marked as follows: the parts provisionally agreed at technical level are marked in green. The parts to be further discussed at technical level have orange markers on the sides. The rows that the Swedish Presidency would like to bring to your attention have a light yellow background.

4. At the **WP TELECOM** on **22 June**, the Presidency would like to know **whether** the tentative compromise **text marked in green is acceptable**.

5. In view of the political negotiation to be held on 28 June, the Delegations are also invited to express their **views on the following landing zones** — the relevant rows in the four-column document in the annex are marked with a yellow background. The annex also features some **compromise text suggestions in brackets** — :

Recognition by web-browsers of Qualified Website Authentication Certificates (QWACs)

Row 351 to 353a, **Article 45** — The EP proposes to make the recognition of QWACs by web browsers conditional, as they should be enabled to take measures to prevent security breaches and the loss of integrity in relation to certificates. Should a breach occur, web browsers would have to notify the Commission, ENISA and the qualified trust service provider that issued the certificate.

The following elements of compromise have been put forward:

- Without prejudice to the legal recognition of QWACs, web browsers may take precautionary measures to prevent potential security breaches regarding loss of integrity of an identified certificate or set of certificates. Web browsers should first notify the alleged breach to the competent national authority and the Commission and the trust service provider in question.
- These precautionary measures should be necessary and proportionate and duly reasoned.

PUBLIC

- The precautionary measures taken by browsers would not challenge the legal recognition of the QWAC until a decision by the competent national authority on their validity is taken. Only if the national authority withdraws the qualified status of the QWAC from the trusted list, browsers' obligation for recognition of that QWAC ceases.
- In addition, the article would include a provision establishing that QWACs should not be subject to any other mandatory requirements exceeding those set in the Regulation. This provision would be aligned with similar provisions on qualified certificates for electronic signatures and seals and necessary to ensure the recognition of QWACs as it is the case for any other qualified trust service.

Certification of the wallet

Rows 76i, 148 to 153, **Article 3(18), 6c** — The EP would like the certification of the wallet to follow national certification schemes relying on the harmonised common technical specifications for the wallet. The EU Cybersecurity Act (CSA) certification schemes would be required when available, relevant and referenced in an eIDAS implementing act. The scope of CSA certification would be extended to all wallet requirements with new functionalities added. Notably, the EP would like to make the General Data Protection (GDPR) certification mandatory.

The following elements of compromise have been put forward:

- EU CSA Cybersecurity certification schemes should be mandatory for certification of the wallet as and when they become available and for the scope they are able to cover. Once these schemes are available, they will be referenced in implementing acts and therefore become mandatory to use for the Wallet certification.
- Until such EU CSA schemes are available and referenced in an implementing act, certification will be carried out by conformity assessment bodies following national certification schemes based on common specifications, procedures and reference standards for the wallet which will be set out in an implementing act. These national certification schemes must integrate emerging relevant CSA schemes as they become available.
- GDPR certification could be made mandatory, albeit it is normally voluntary in accordance with Article 42 GDPR.

Business model for the use of the wallet and e-Signatures

Row 134a, **Article 6a(6a)** — The EP proposes to have the issuance and use of the European Digital Identity Wallets be free of charge for all natural and legal persons, with qualified electronic signatures being provided free of charge to all wallet users.

The following elements of compromise have been put forward:

- The wallet should be free to use for natural persons for issuance, authentication and revocation.
- Qualified eSignatures within the wallet could be free for natural persons but Member States may introduce paid eSignature services above a minimum number of free transactions.

Extended wallet functionalities

Rows 118b to 118i; 119a and 119b, **Article 6a(3)** — The EP proposes several extended wallet functionalities. The first one is a common dashboard, offering access to a database of all transactions carried out through the wallet for the user to: view an up to date list of relying parties with whom the user has established a connection and, where applicable, all data shared; easily request to a relying party the deletion of personal data pursuant to GDPR; easily report to the competent national authority for breaches of GDPR; revoke any electronic attestation of attribute issued by the user.

A second feature is the peer to peer function, allowing for the authentication of a third person's European Digital Identity Wallets or a connecting relying party.

A third element is to generate pseudonyms and the ability to store them encrypted and locally within the wallet.

Fourth is the ability to issue and revoke electronic attestation of attributes issued directly by the user, with also the possibility to download all the user's data, electronic attestation of attributes and configurations.

Finally, the EP would want to enable users to exercise their right to data portability by switching to another European Digital Identity Wallet belonging to the same user.

The following elements of compromise have been put forward:

- A **common dashboard** with the following functions:
    - accessing a log to all transactions carried out through the wallet;

PUBLIC

- viewing an up-to-date list of relying parties with whom the user has established a connection;
- requesting a relying party to delete personal data (pursuant to GDPR) and facilitating lodging a complaint with a supervisory authority following GDPR rules and procedures.

- The possibility for a **wallet-to-wallet connection** in order to securely authenticate a third person's European Digital Identity Wallet, identity data and electronic attestations of attributes. It would not include the function of authenticating a connecting relying party in peer-to-peer connection, as this is technically done through an interface.
- The functionality to manage — rather than generate — **pseudonyms** through the wallet. It would not include prescribing local storage of pseudonyms to allow for different implementation scenarios.
- The possibility to exercise, within constraints of security and technical feasibility, a user's right of **data portability** by switching to another European Digital Identity Wallet belonging to the same user, without prejudice to data portability rules under the GDPR. The limits to portability due to technical constraints would be clarified in a Recital.
- The possibility to **export user data**, electronic attestation of attributes and configurations, within technical constraints and feasibility.
- The **issuance and revocation of electronic attestation of attributes** issued directly by the user is inconsistent with the trust services framework and would therefore **not** be included. A Recital could elaborate on how self-generated documents signed by the user by means of (qualified) e-signatures provided by the wallet can allow the user to make declarations with legal value.

e-ledgers

Rows 392 to 404, **Article 45h** — The EP would prefer to e-ledgers as a new trust service due to the absence of a clear market failure to address.

- A way forward could be to maintain the new trust service for e-ledgers while:
  - introducing a Recital indicating that the new regulatory regime for ledgers would ensure technological neutrality and respect environmental sustainability;
  - including clarifications that qualified e-ledgers should enjoy a presumption of unique and accurate sequential chronological ordering, as suggested in the General Approach.

Governance

Rows 404d to 404be (including some previously greened rows), **Articles 46a to 46c** — The EP would like to introduce a comprehensive governance model for the wallet ecosystem, featuring national competent authorities (NCAs), Single Points of Contact (SPOCs) at national level and a European Digital Identity Board at EU level. In particular, NCAs would be in charge of monitoring and enforcing the application of the eID Regulation; supervising issuers of European Digital Identity Wallets established on their territory; supervising allegedly unlawful or inappropriate behaviour of relying parties; supervising qualified trust service providers established in the territory (in line with the current eIDAS Regulation); taking action in case of non-compliance by non-qualified trust service providers (in line with the current eIDAS Regulation); cooperating with NIS and Data Protection authorities.

The following elements of compromise have been put forward:

- National **Single Points of Contact** would be established to improve cross-border cooperation and information exchange between national competent authorities and national supervisory bodies.
- **An eID Framework Cooperation Network at EU level,** including representatives of national authorities and the Commission**,** would be established. However, its tasks would be limited to coordination, cooperation, exchange of best practices and advisory functions.
- The role and structure of the established **supervisory bodies for trust services** would be maintained in order to capitalize on the extensive experience acquired and apply it to the new trust services created under the eID proposal.
- **National competent authorities** would be created in order to ensure wallet issuers' compliance with the obligations in the Regulation. The national competent authorities would at least be able to:
    - request the necessary information for wallet-related supervision activities;
    - carry out on-site inspections and off-site supervision;
    - take remedy actions in relation to non-compliant behaviour of issuers of European Digital Identity Wallets and relying parties.

Penalties

Rows 223d to 223f, **Article 16** — The EP proposes to introduce a penalty regime aligned with the NIS2 Directive setting minimum values for the maximum thresholds that should be applied to all breaches of the Regulation following specific national rules. The penalties proposed for non-qualified trust service providers would amount to a maximum of at least EUR 7 million or 1,4% of the total worldwide annual turnover of the undertaking to which the non-qualified trust service provider belongs in the preceding financial year, whichever is higher; the penalties proposed for qualified trust service providers would amount to a maximum of at least EUR 10 million or 2% of the total worldwide annual turnover of the undertaking to which the qualified trust service provider belonged in the preceding financial year, whichever is higher.

The following elements of compromise have been put forward:

- A coherent regime establishing maximum fines for all infringements of the Regulation in line with the objective of harmonising and strengthening supervision of trust service providers across the Union.
- Administrative fines for qualified and non-qualified trust service providers of a maximum of at least EUR 500,000 or 1% of the total worldwide annual turnover of the undertaking to which the qualified trust service provider belonged in the preceding financial year, whichever is higher.

Unique and persistent identifier (UPI)

Rows 100a, 176 to 179a; 179c to 180a, **Article 3(55a), 11a** — The EP would like to limit the use of UPIs for access to public-sector online services that require identification of the user by Union or national law, in Member States where they already exist, on the request of the user. UPIs should not be used for authentication or identification in relation to private-sector services. A UPI for legal persons could be foreseen.

The following elements of compromise have been put forward:

- proposing a definition for UPIs, (row 100a) as they are not yet defined in the eIDAS Regulation. This definition should be technology neutral: "unique and persistent identifier' means an identifier which may consist of either single or multiple public or

private, horizontal, sectorial or relying-party specific identification data, is associated with a single user within a given system and persistent in time;"

- including one or more UPIs in the minimum set of person identification data (PID) for the identification of the user upon their request only in those cases where identification of the user is required by law, as suggested in the General Approach.
- limiting the disclosure of these UPIs to the public sector and, in the private sector, to those cases where the disclosure of the UPI is specifically required by law.

Timeline for the issuance of the wallets and number of wallets issued

Rows 112, **Article 6a(1)** — The Commission's proposal requires Member States to issue a European Digital Identity Wallet within 12 months after the entry into force of the EUDIWR. The European Parliament proposed that Member States issue at least one European Digital Identity Wallet by 18 months after the date of entry into force of the EUDIWR. The Council proposed that European Digital Identity Wallets are provided within 24 months after the entry into force of the relevant implementing acts referred to in paragraph 11 of Article 6a and paragraph 4 of Article 6c. The following elements of compromise have been put forward:

- Wallets are issued 24 months after adoption of the revised Regulation.
- Member States may issue several wallets.

6. The Swedish Presidency would appreciate to know the **degree of flexibility** that can be accorded to the **above-mentioned issues**.

7. Concerning the next steps, as mentioned the third trilogue will be held at EP premises on 28 June. In preparation for the political trilogue, the Presidency will seek a revision of the mandate at the Coreper I meeting of 28 June.

8. Delegations will be kept informed and consulted on the proposed changes at technical and political level.

9. The Swedish Presidency would like to stress its commitment to achieving an agreement on this file as soon as possible.
