WORKING DOCUMENT

From:	General Secretariat of the Council
To:	Delegations
Subject:	Proposal for a Regulation of the European Parliament and of the Council on the use of railway infrastructure capacity in the single European railway area, amending Directive 2012/34/EU and repealing Regulation (EU) No 913/201 - Consolidated 4-column document

In view of the Land transport working party on 10 July, delegations can find in annex a revised and consolidated version of the 4-column document, reflecting the situation after the 3rd trilogue and the work that has been done after the trilogue to update the text in line with what was agreed. This includes further clarifications, alignments and editing that was done in the ITM on 17 June, in an editorial meeting on 23 June and written proposals that have been exchanged.

The 4th column (draft agreement) is compared with the 3rd column (Council mandate).

As regards the reference to either 'sections and nodes', 'elements of infrastructure', 'routes' and even 'railways' the Regulation would have a definition on 'sections and nodes' (line 84a) and 'elements of infrastructure' (line 84d). The text has been revised to make all reference consistent and coherent. Delegations will find the relevant parts in line 64j, 64l, 79, 84a, 84d, 133, 135, 177, 178, 179, 179a, 223b, 250, 260, 261, 274, 278, 279, 281, 283, 291, 296, 315, 319, 320b, 431, 432, 433, 442d and 529.

Further, following the text in Article 14 (line 199), ENIM would be allowed to issue an opinion or recommendation in case an applicant raises a concern with any of the planning documents referenced in Article 11(2).

The Presidency and the Parliament continue to disagree on how to refer to the provisions of Article 3a(2) in Article 25 (line 319 and 320b) and Article 37 (line 442 and 442d). The Presidency insists that there should be reference to the whole paragraph 2 of Article 3a (in line 319 and 442) and the Parliament would like to see this limited to point (d) of the second paragraph. The Presidency will come back to this at a later stage.

The Parliament is insisting in Article 17(4a) (line 225a) that the capacity model should also be submitted to the national regulator for scrutiny, as is the case for the capacity supply plan (line 251). The Presidency will defend the Council's mandate on this issue.

In Article 18 there were some editing and presentation issues that have been resolved.

The proposal related to empowerments in a new Article 70a and 70b has not yet been included. The Presidency will come back to this at a later stage.

An alignment has been done regarding ENIM developing the frameworks and not adopting guidelines or recommendations. Delegations can find this in line 95, 188, 252, 271, 272, 277 and 549 and should be done in line 478 and 505.

Finally, in Article 12, paragraph 5a (line 176a-d) has been moved after paragraph 6 and is now paragraph 6a (line 179a-d).

PUBLIC

Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL on the use of railway infrastructure capacity in the single European railway area, amending Directive 2012/34/EU and repealing Regulation (EU) No 913/2010 (Text with EEA relevance)

2023/0271(COD)

		passenger changeover, the use of longer trains with increased axle load, the roll-out of harmonised ERTMS across Europe, as well as automated trains operation.		
Recital 2b				
12b		***(2b) Tackling the efficiency of rail in order to increase the multi-modal competitive aspect between different transport modes is important to facilitate a substantial modal shift and to reach the targets set in the Sustainable and Smart Mobility Strategy. Therefore, further measures to increase the competitiveness by rail, such as lower track access charges, should also be considered. With an increased demand for rail capacity by both passenger and freight services, investments will also be needed to realise those capacity enhancing measures.***		
Recital 2c				
12c		***(2c) Shift-to-rail objectives on EU level require national targets based on concrete national plans developed by Member States following bottom-up approach.***

16a			**(6a) The operation of the Channel Fixed Link is regulated in particular by the Treaty concerning the construction and operation by private concessionaires of a channel fixed link, between France and the United Kingdom of Great Britain and Northern Ireland, signed at Canterbury on 12 February 1986 ('Canterbury Treaty'), and the Concession Agreement between the Secretary of State for Transport, Le Ministre de I'Urbanisme du Logement et des Transports, The Channel Tunnel Group Limited and France-Manche S.A. Under that Treaty and that**	

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement
			Concession ('Concession Agreement'), the concessionaires are to manage the infrastructure and to operate a shuttle service for road vehicles. Directive 2012/34/EU, with the exception of certain Articles, does not apply to undertakings the business of which is limited to providing solely shuttle services for road vehicles through the Channel tunnel or to transport operations in the form of shuttle services for road vehicles through that tunnel. Similarly, it is not appropriate to apply this Regulation to the management of infrastructure capacity for the operation of such services. Unless otherwise provided, this Regulation should apply to the management of infrastructure capacity for the operation of other services, such as passenger and freight trains. **Moreover, under the Canterbury Treaty and the Concession Agreement, the concessionaires have the obligation to comply with the provisions of that agreement, with the laws and regulations in**	

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement
			force in France and in the United-Kingdom and with EU rules applicable to the construction and operation of the Channel Fixed Link. The French and the British Governments have the obligation to endeavour to coordinate between them and take such steps, including approaches to international organisations, as are necessary in particular for the operation of the Channel Fixed Link in accordance with the Concession Agreement. Therefore, the application of certain provisions of this Regulation to the infrastructure of the Channel Fixed Link should be excluded where such application presents a risk of conflict with the application of the law in force in the United Kingdom. This is the case of the provision defining threshold values for highly utilised or congested infrastructure.

			continuously available and no relevant change is expected to arise in the short or mid-term or with respect to a portion of the Union rail network that is geographically isolated by the sea from the rest of the Union rail network, for which there is no concrete need to coordinate with other Member States or infrastructure managers managing infrastructure located in other Member States, Member States and infrastructure managers should be able to follow a pragmatic and proportionate approach in order to avoid disproportionate costs and administrative burden, while abiding with the obligations laid down in this Regulation.	
Recital 6c				
16c			**(6c) This Regulation should not prevent Member States from adopting measures necessary to safeguard essential security or defence interests and to ensure that military have sufficient access to railway infrastructure.**	
Recital 6d				

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement
16d			**(6d) Transport infrastructure is the backbone of the economy and society as a whole. Some rail infrastructure is critical to ensure the good functioning of vital societal functions and has a strategic significance for national security. In certain cases, granting capacity rights to an applicant could compromise public security or public order in the Union, including at Member State level, for example where a railway undertaking intends to transport on the railway infrastructure of a Member States dangerous goods or weapons having illegally entered the Union. In order to guarantee smooth, safe and secure rail transport traffic and to ensure the protection of their rail transport infrastructure, Member States should be allowed to require infrastructure managers to refuse to grant, or to withdraw, capacity rights to an applicant where the access to their infrastructure presents a risk for public order or public security, including to national security and defence. Any such decision**	

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement
			should be duly justified and strictly necessary and proportionate to the objective pursued, taking also into account the impacts of that decision on competition and on the continuity of the supply chains, in particular for the supply of critical inputs, and where the requested capacity right constitutes a multi-network capacity right. When assessing the risk for public security or public order, the Member State concerned may take into account, among others, the fact that the applicant is subject to restrictive measures adopted by the Union and the reasons for adopting such measures, that it is owned or effectively controlled by, or acts on behalf or at the direction of, a person or an entity subject to restrictive measures adopted by the Union, or that the applicant or that person or entity is engaged in illegal activities or in activities facilitating the development of a third country's military capabilities presenting a threat to the Member State's national security. Such decision	

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement
			should be regularly reviewed by the Member State, in particular by assessing regularly whether it continues to be justified and proportionate. The Member State should inform the Commission, the regulatory body and, for multi-network capacity rights, the other Member States concerned of the decision adopted and the reasons thereof and should coordinate with those other Member States in case those latter raise concerns with the decision adopted.

Deliverable	Contents
Capacity strategy (Article 16)	– Planned development of physical infrastructure, including new construction, upgrades, renewals and closures /decommissioning; – Forecasted development of demand for rail transport services; – Strategic guidance on capacity utilisation by Member States, including an outlook on the evolution on public service obligations; – Capacity allocated in framework agreements and capacity required to provide transport services under public service contracts; – Infrastructure declared highly utilised or congested; – Major capacity restrictions resulting from infrastructure works.
Capacity model (Article 17)	– All information included in the capacity strategy, where relevant updated and further detailed – Volume of capacity available to applicants by rail transport market segment and/or by allocation process – Volume of capacity required for infrastructure works by impact on traffic (categories) – Geographical scope: at least the lines included in the TEN-T core and extended core network – Geographical detail: breakdown in appropriate planning sections reflecting infrastructure and demand characteristics – Temporal scope: one working timetable period – Temporal detail: at least annual overview (capacity restrictions) and one or more representative day/days (capacity available for requests)
Capacity supply plan (Article 18)	– All information included in the capacity model, where relevant updated further detailed – Prep-planned capacity available for requests, defined in the form of capacity objects – Capacity restrictions, defined in the form of capacity objects – Alternative capacity available during capacity restrictions – Alternative capacity available in the event of network disruptions

Common rules and procedures for the coordination of traffic management, disruption management and crisis management between infrastructure managers and with operational stakeholders.	Article 42, Article 43, Article 45, Article 46, Article 47, Article 48
Common rules and procedures for managing and allocating capacity in the event of network disruptions and crisis situations.	Article 41(1)
Definition of responsibilities of operational stakeholders involved in the management of cross-border traffic, based on a set of agreed operational procedures, milestones and interfaces.	Article 45
Procedures, rules, tools and interfaces for communication and the exchange of information, including harmonised digital tools and interfaces, between infrastructure managers, operational stakeholders and other stakeholders concerned, in particular public authorities.	Article 45, Article 48, Article 62
Principles to establish dedicated coordination groups in relation to traffic management, disruption management and crisis management.	Article 53(2)
Arrangements for simulation and training, in particular in relation to network disruptions and crisis situations.	Article 42, Article 46, Article 47
Arrangements to review the performance of traffic management, disruption management and crisis management, including the coordination between operational stakeholders.	Article 50, Article 51

Element	Reference(s)
Common principles for traffic management, disruption management and crisis management to be taken into account by infrastructure managers when setting out rules and procedures for traffic management.	Article 43
Common rules and procedures for the coordination of traffic management, disruption management and crisis management between infrastructure managers and with operational stakeholders.	Article 42, Article 43, Article **44(2) Article** 45, Article 46~~, Article 47, Article 48~~
Common rules and procedures for managing and allocating capacity in the event of network disruptions and crisis situations.	Article 41(1)**, Article 41(2)**
Definition of responsibilities of operational stakeholders involved in the management of cross-border traffic, based on a set of agreed operational procedures, milestones and interfaces.	Article 45
Procedures, rules, tools and interfaces for communication and the exchange of information, including harmonised digital tools and interfaces, between infrastructure managers, operational stakeholders and other stakeholders concerned, in particular public authorities.	Article 45, Article ~~48, Article~~ 62
~~Principles to establish dedicated coordination groups in relation to traffic management, disruption management and crisis management.~~	~~Article 53(2)~~
~~Arrangements for simulation and training, in particular in relation to~~**Common method to estimate the conditions on duration and likely impact on traffic and the content of the incident report of the** Network ~~disruptions and crisis situations.~~**Coordinator**	~~Article 42,~~ Article 46~~, Article 47~~**(5a)**
~~Arrangements to review the performance of traffic management, disruption management and crisis management, including the coordination between operational stakeholders.~~**Guidelines with the purpose of ensuring appropriate and regular consultation of interested parties regarding European and cross-border matters**	Article ~~50, Article 51~~**54(1)**

PUBLIC

Commission Proposal Table 12

Type of incident	Estimated likely duration	Estimated likely impact
Network disruption	The return to pre-incident levels of available capacity for train utilisation requires 3 or more days	– 50% or more of the trains on the affected section operating on a single network need an operational treatment – Less than 50% of trains on the affected section that operate on more than one network need or are expected to need an operational treatment
Multi-network disruption	The return to pre-incident levels of available capacity for train utilisation requires 3 or more days	– 50% or more of trains on the affected section that operate on more than one network need or are expected to need an operational treatment

Commission Proposal Table 13

Performance area	Relevant issues (indicative)
Infrastructure and equipment	– Capacity and capabilities of the physical infrastructure and its equipment, including deployment of TEN-T standards – Reductions in infrastructure capacity or capability due to deferred infrastructure renewal, maintenance or repair
Infrastructure capacity	– Capacity offer in terms of quantity and quality – Capacity utilisation, spare capacity to accommodate traffic growth – Consistency between available capacity (planned or unplanned) and market needs – Stability of the capacity offer, in particular in connection with infrastructure works – Congested infrastructure – Planned dwelling times of trains at border stations
Traffic management	– Punctuality / delays of different types of rail services, at origin, intermediate stops and destination and at operationally important locations – Train cancellations – Actual dwelling times of trains at border stations
Disruption management and crisis management	– Share of traffic that could be re-routed or re-scheduled during the disruption or crisis – Impact of disruptions on rail traffic in terms of delays and cancellations – Impact of disruptions on operators of rail services and their customers – Specific issues encountered (qualitative)
Deployment and performance of digital services, tools and interfaces	– Support of the processes related to capacity management, traffic management and disruption management – Completeness and quality of the information and data provided – Alignment with European architecture developed in ERJU and with the relevant technical specifications in accordance with Directive (EU) 2016/797
Compliance with regulation; regulatory oversight	– Process indicators monitoring compliance with rules and procedures – Complaints lodged with regulatory bodies and ENRRB
