1. Introduction

This report projects the inflows and outflows of the EU budget in accordance with Article 253(1)(c) of the Financial Regulationⁱ. This sixthⁱⁱ edition forecasts the revenue and expenditure stemming from the Multiannual Financial Framework (MFF) 2021-2027ⁱⁱⁱ, and the 2028-2034 MFF based on the Commission's proposal for the next MFF^{iv} for payments on 2028-2034 commitments.

On the expenditure side, the report forecasts payments arising from commitments entered into under the current and previous MFFs, including the stock of outstanding commitments (RAL) expected at the end of 2027. As in last year's report, it also projects payments related to commitments that would be entered into under the 2028-2034 MFF on the basis of the Commission proposal for the next MFF.

Revenue for 2027 is based on the draft budget 2027. Revenue as of 2028 is forecast based on the 2025 Commission proposal for a new Own Resources Decision^v. The revenue projections also consider the Agreement on the withdrawal of the United Kingdom of Great Britain and Northern Ireland from the European Union and the European Atomic Energy Community^{vi} ('Withdrawal Agreement').

The estimates for payments presented in this report are based on the revised expenditure ceilings (technical adjustment of the MFF for 2027)^{vii} and the commitment appropriations included in the draft budget for 2027^{viii}, which incorporates the programme-specific adjustments under Article 5 of the MFF Regulation^{ix} (MFFR)^x as well as re-use of decommitments under Article 15(3)^{xi} of the Financial Regulation.

As regards NextGenerationEU, all net borrowing to finance new disbursements will be completed by the end of 2026. Subsequently, only minor amounts, mainly for administrative expenditure will be made. NextGenerationEU disbursements fall outside of the scope of this report, which covers the period as of 2027.

2. Forecast of outflows of the EU budget 2027-2034

Over the period 2027-2034, payments are estimated at EUR 2 173 billion^{xii}. The estimated annual average of outflows of the EU budget is EUR 272 billion.

They are composed of:

- Payments on commitments made in the MFF 2021-2027 and earlier MFFs

Payments on commitments made in the MFF 2021-2027 are paid partly in 2027 and partly in the MFF 2028-2034, for an estimated total of **EUR 527 billion**, or EUR 75.3 billion on average for 2027-2033. Around 40% of those payments, i.e. EUR 210 billion are expected in 2027 in line with the draft budget proposal. The remaining EUR 317 billion is projected to be paid mostly in the first 3 years of the new MFF. This is consistent with past implementation patterns as the programmes (notably cohesion policy) are reaching cruising speed. The payments on outstanding commitments stemming from MFFs prior to 2021-2027 are estimated at EUR 5.9 billion, or EUR 0.8 billion on average for 2027-2033. They are expected to decrease and be phased out by end 2033.

- Payments on commitments for the MFF 2028-2034

As per the Commission proposal for the MFF 2028-2034 of July 2025 and last year's report, payments on commitments made in the MFF 2028-2034 are on average EUR 234 billion per year, **totalling EUR 1 641 billion** over the period. Payments are overall rather frontloaded to the first half of the 7-year period as the new programmes are expected to have a quicker implementation pattern. As explained in last' year report, the frontloading is the result of measures proposed to facilitate a timely start and a smoother implementation profile, resulting in a more even pattern of payments over the period.

Chart 1 - Payments forecast by category

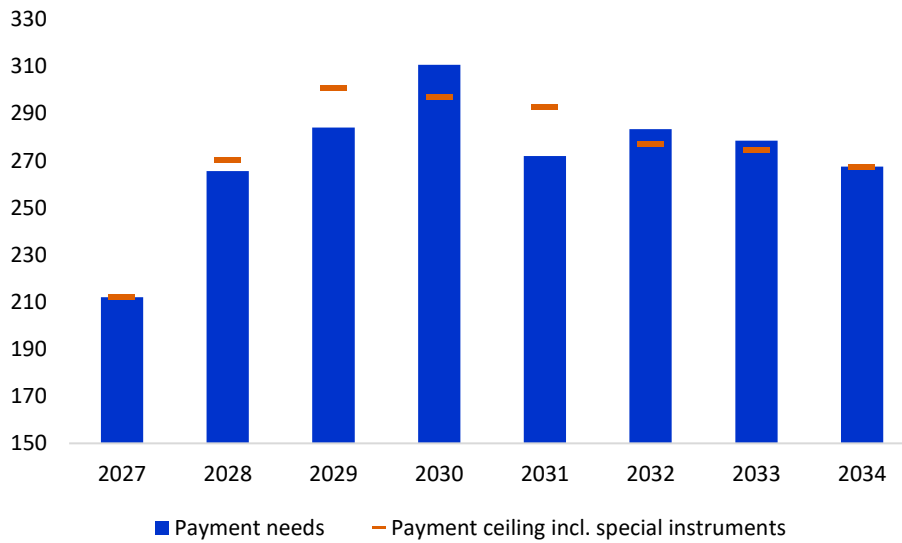

Compared with the estimates underpinning the Commission proposal of July 2025, the current forecast indicates a lower level of payments by EUR 18 billion linked to changes in RAL payments (i.e. payments on commitments entered into before 2028). This difference is mainly driven by the acceleration of payments under the 2021-2027 cohesion policy in 2026 and 2027, which reduces the stock of outstanding commitments expected at the end of the current MFF and, consequently, the level of payments on pre-2028 commitments required during the 2028-2034 period.

The proposed payment ceiling for the 2028-2034 MFF remains sufficient to cover overall the payment needs currently forecast over the period, with some variations across years. Under the current assumptions, payments may exceed the annual ceilings in 2030 (EUR 14 billion), 2032 (EUR 6 billion) and 2033 (EUR 4 billion). Payments would be below the ceilings in years 2028 (EUR 4 billion), 2029 (EUR 17 billion), and 2031 (EUR 21 billion). To ensure that the payment ceiling is respected in each year of the MFF, the use of the mechanisms provided for in the MFF Regulation to adjust annual payment ceiling levels may be required.

The resulting difference between the overall current payment forecast and the proposed MFF payment ceilings should, however, be interpreted with caution. While the forecast for payments on existing commitments benefits from more recent implementation data, the payment profile of programmes under the future MFF is subject to the outcome of the ongoing negotiations. Changes to the overall size and composition of the MFF may affect the timing and level of future payment needs.

Chart 2 - Payments forecast compared to MFF payment ceiling for the period 2027-2034

2.1. Payments in relation to the commitments of the 2021-2027 MFF

Cohesion and the Common Agricultural Policy (CAP) represent more than half of the projected payments stemming from the 2021-2027 MFF.

Heading 2a - Cohesion policy

The implementation of cohesion policy funds is accelerating compared to last long-term payment forecast report^{xiii}. The reinforcement for cohesion policy in 2026^{xiv} (EUR 3.4 billion for the European Regional Development Fund, EUR 0.6 billion for the Cohesion Fund, EUR 1.4 billion for the European Social Fund Plus) requires additional funding to cover the higher payment claims.

This acceleration is the result of Member States submitting in 2025 payment applications well beyond the n+3 decommitment rule, driven by the flexibilities and financial incentives provided to Member States as part of the mid-term review of cohesion policy and the Strategic Technologies for Europe Platform (STEP) Regulation. This has increased the pressure on the 2026 budget (as reflected in the proposal for a draft amending budget 2/2026). This acceleration is forecast to continue in 2027 and 2028. The 2027 and 2028 forecast assumes that the submission of payment claims would align with the historical profile in the coming years, leading to disbursement of about 18% of the funds' allocations in 2027, and to around 50% of the total allocations to be paid out from 2028 onwards.

Heading 3 - Common Agricultural Policy (CAP) and Just Transition Fund

The payments forecast for Pillar I of the CAP, market-related expenditure and direct payments, amounts to EUR 40.6 billion in 2027, reflecting the most recent draft budget.

The implementation of Pillar II under the CAP strategic plans – the European Agricultural Fund for Rural Development (EAFRD) – began in 2023. The transitional provisions extending the 2014-2020 programmes

until 2022 enabling their continued implementation under the n+3 rule provided one more year to complete payments compared to the rules for the 2023–2027 CAP strategic plans, which are subject to the N+2 rule.

The forecast of payments stemming from the MFF 2021–2027 includes payments from the 2023–2027 CAP Strategic Plans as well as those linked to the extension of the rural development programmes to 2021 and 2022, which will be completed by 2027. The forecast also considers the transfers between pillars of the Common Agricultural Policy communicated by Member States^{xv}, which resulted in a net transfer of EUR 5.5 billion from Pillar I (EAGF) to Pillar II (EAFRD) for the years 2023–2027.

The implementation of the 2023–2027 CAP plans is expected to reach its peak in 2028 with lower payments in 2029 and later in 2030, and closure expected in 2031. The completion of the 2014–2022 operational rural development programme and the latest payments are expected in 2027.

For the Just Transition Fund, payments to date have been predominantly financed under its NextGenerationEU component, which will be used until the end of 2026, in line with legal deadlines. The first substantial payments under the MFF component are expected from 2026 onwards.

Other programmes and headings

The Ukraine Reserve, a special instrument that mobilises support for expenditure over and above the MFF expenditure ceilings for 2024–2027, is foreseen to conclude most payments by end-2027. EUR 0.9 billion would be covered in the 2028–2034 MFF as payments on outstanding commitments.

2.2. Payments in relation to the commitments of the 2028–2034 MFF

The payments for the 2028–2034 MFF are forecast at **EUR 1 641 billion** over the period, covering over **80%** of the MFF. Taking into account that the negotiations on the next MFF are ongoing, the data presented in the section are based on the Commission proposal of July 2025 and are as such the same as in last year's report.

Heading 1 – Economic, social and territorial cohesion, agriculture, rural and maritime prosperity and security

The main driver of the payments profile in the 2028–2034 MFF will be the National and Regional Partnership Plans with a total **EUR 965 billion** forecast payments for the heading overall.

As of 2028, the EU is due to start the repayment of the debt issued under NextGenerationEU. For the MFF 2028–2034, the Commission proposes a fixed amount of EUR 24 billion per year in current prices for the repayment of interest and capital of the non-repayable support provided under NextGenerationEU. This means an overall amount of **EUR 168 billion** over 2028–2034.

The remaining payments in relation to this heading are mostly for decentralised agencies (such as Frontex and Europol) where the EU payments are made in full in the same year as the subsidy to the agency is committed.

Heading 2 – Competitiveness, prosperity and security

Payments under heading 2 total **EUR 424 billion**. Payments are mainly driven by the European Competitiveness Fund and Horizon Europe.

Heading 3 – Global Europe

Payments under heading 3 total **EUR 135 billion**. Payments are mainly driven by Global Europe.

Special instruments

Special instruments fall under two categories:

Thematic instrument (Ukraine) – The Ukraine Reserve will be a thematic special instrument (EUR 100 billion) to allow the Union to finance Ukraine's recovery and reconstruction efforts as well as supporting the country's accession path via pre-accession assistance. All support to Ukraine will be channelled and implemented through Global Europe. The MFF Regulation foresees that the annual amount mobilised under the Ukraine Reserve in a given year shall not exceed EUR 13.5 billion in 2025 prices. On 24 February 2026, the a Regulation^{xvi} establishing a EUR 90 billion Ukraine support loan was adopted. On 23 May 2026, the 2021–2027 MFF Regulation was amended to allow the financial backing of this loan under the EU budget headroom, over and above the MFF ceilings, as well as to create a special instrument for the financing of the interest rate subsidy provided by the Union to Ukraine for the loan. This expenditure and the related contingent liabilities, to be covered under the EU budget headroom, is not included in the EUR 100 billion Ukraine Reserve proposed in July 2025.

Non-thematic instruments – allocating additional amounts for specific MFF programmes subject to specific conditions. Their mobilisation and the subsequent payment needs cannot be forecast. For the Flexibility Instrument, the MFF Regulation for 2028–2034 foresees at minimum an annual fixed amount of EUR 2 000 million in 2025 prices.

The expenditure covered by the mobilisation of special instruments is counted in addition to the MFF ceilings and is excluded for the purpose of establishing the margins for commitments and payments. Due to their nature and since they are subject to decisions of the budgetary authority on annual basis, the amounts for 2028–2034 presented in this report do not account for the mobilisation of these special instruments.

2.3. Decommitments

The forecast of decommitments stemming from programmes under the current and prior MFFs until end-2034 stands at **EUR 11 billion**. It is substantially driven by the cohesion programmes under the current MFF and the European Agricultural Fund for Rural Development (EAFRD).

The MFF 2028–2034 proposes substantive changes to the delivery modes aimed at simplifying and accelerating implementation, leading to a full take up of the commitments in the next MFF. Therefore, no specific decommitment forecast is assumed for programmes under the next MFF.

Heading 2a – Cohesion policy

Considering the latest available information, decommitments for the completion of the programmes 2014–2020 have increased compared to last year’s report from EUR 0.5 billion to EUR 1.6 billion. Overall, the risk of decommitments at the end of 2027 for the programmes 2021–2027 is low thanks to accelerated implementation, and additional pre-financing stemming from the mid-term review of cohesion policy. In 2025 and 2026, Member States have submitted payment applications exceeding the n+3 decommitment rule, and this trend is expected to continue in 2027. However, EUR 0.4 billion of decommitments are expected at closure, in line with implementation patterns of the previous programming period.

Heading 3 – Common Agricultural Policy

The forecast of decommitments from rural development programmes 2014–2022 has decreased compared to the last forecast, from EUR 3.1 billion to EUR 1.5 billion expected in 2027. Earlier decommitments amounted to EUR 0.3 billion. Overall, decommitments under EAFRD for the 2014–2022 programmes are now estimated at 1.5% of the total allocation, noting an improvement compared to the 2007–2013 rural development programmes where the share of decommitments stood at 2%. As regards the timing, decommitments are expected by end-2027 when the closure of payments will be processed.

At present, an amount of EUR 1 billion is expected to be decommitted under the 2023–2027 CAP Strategic Plans. Those decommitments are expected to take place between 2026 and 2030.

Other programmes and headings

For the programmes directly or indirectly managed by the Commission, the decommitment forecast is built on the latest project-level information. The projections for the decommitments related to the MFF 2021–2027 programmes are presented in table 2. They are consistent with the estimates from the payment schedules. However, the precise year of decommitment cannot be forecast with precision, as it depends on the closure of individual projects and actions.

2.4. Evolution of the level of outstanding commitments

The next MFF is expected to start with EUR 321 billion RAL^{xvii}, which is a decrease of EUR 18 billion compared to last year’s forecast (EUR 339 billion). This result is mostly driven by the revised expectations for cohesion policy programmes and increased payments in 2026–2027. The expected lower RAL at the start of the next MFF is directly translated in the corresponding lower forecast of payments for the completion of pre-2028 programmes in the next MFF.

NextGenerationEU RAL will be absorbed by end-2026 when all the payments will be completed, except for small amounts mainly linked to administrative expenditure.

Although the RAL is projected to increase in nominal terms from EUR 321 billion at the start of the MFF to EUR 344 billion at the end of 2034, its relative weight in the EU economy and in relation to the size of the MFF is expected to decline. The RAL would decrease from 1.6% of EU GNI at the end of 2027 to 1.3% at the end of 2034 and represent around one fifth of the 2028–2034 MFF, a lower ratio than projected for the current MFF. This points to a more contained stock of outstanding commitments than under previous programming periods and a reduced concentration of payments beyond the end of the MFF. The projected development reflects both the stronger implementation observed towards the end of the current MFF and

the implementation features proposed for the 2028-2034 MFF, which are expected to lead to a timelier execution of programmes and a lower accumulation of outstanding commitments over time.

3. Forecast of inflows of the EU budget 2027-2034

For 2027, revenue is based on the draft budget 2027. Revenue as of 2028 remains as forecast in last year's report as they reflect the Commission proposal for a new Own Resources Decision, which is currently negotiated. The residual GNI own resource estimate is mechanically adjusted to ensure an overall balance with the forecast payments, which have been updated for the completion of pre-2028 programmes.

The EU budget is financed by own resources and other revenue. In addition, the Union is empowered to borrow funds to finance NextGenerationEU, which are channelled into the budget through external assigned revenue – with the net borrowing ending in 2026.

The own resources needed to finance the budget are determined by total expenditure less 'other revenue'. The forecast of the EU budget revenue is based on the principle that expenditure must be matched by revenue; therefore, total revenue equals total expenditure.

Since 2021, in line with the Withdrawal Agreement (part V), the United Kingdom contributes to the EU budget in relation to outstanding commitments of previous financial frameworks. The United Kingdom's contribution constitutes 'other revenue' of the EU budget. It will progressively phase out as payments on outstanding commitments are made in the next MFF, as presented in section 2.1. For 2028-2034, 'other revenue' includes the updated United Kingdom contribution.

Own resources – currently traditional own resources as well as VAT, plastics and GNI-based own resources – account for most of the revenue needed to finance budget expenditure. The spending cycle determines the development of Member States' own resources contributions over the forecast period.

3.1. Revenue sources

For 2027 the revenues in this report reflect the draft budget 2027. For the next MFF, own resources are projected in line with the Commission proposal of July 2025. As per the forecast accompanying the Commission proposal, traditional own resources (customs duties) are projected to grow at the same rate as GNI in current prices of each Member State starting from the level of gross customs duties projected for the draft budget 2026, using the parameters of the new Own Resources Decision proposal for the next MFF.

Revenue from the VAT-based own resource is projected starting from the VAT bases of the individual Member States included in the draft budget 2026. The VAT bases are projected to grow at the same rate as GNI in current prices.

The plastics-based own resource is projected starting from non-recycled plastic packaging waste included in the draft budget 2026. The corresponding plastic packaging waste is projected to grow at the same rate as GNI in constant prices. Recycling rates are projected to converge linearly towards the EU recycling target of 55%, which must be achieved by 2030.

The GNI-based own resource for the EU-27 is calculated as the remaining difference between all other own resources and other revenue on the one hand and the forecast expenditure on the other. The parameters for the own resources specified in the Own Resources Decision determine the Member States' share in the total amount of own resources contributions that is needed to balance the EU budget.

The Commission proposal for an Own Resources Decision includes several additional own resources.

The revenue forecast for the own resource based on the European Emission Trading System (ETS1) is based on an assumed carbon price of EUR 88.33 in 2025 prices. The number of auctioned emission allowances is derived from the legal provisions in the ETS Directive^{xviii}.

Regarding the own resource based on e-waste, first the underlying non-collected waste of electrical and electronic equipment (WEEE) in a Member State in a given year is calculated. Then, collection rates are projected to converge linearly towards the EU collection target of 65% by 2034.

Revenue from the Tobacco Excise Duty Own Resource is projected based on the Tobacco Excise Duty Directive and its proposed recast.

Revenue from the own resource based on the Carbon Border Adjustment Mechanism (CBAM) is projected assuming the same carbon price as for ETS1.

The projections for the Corporate Resource for Europe (CORE) are based on 2023 firm-level data from the Orbis database. An annual lump-sum contribution from all companies that operate and sell in the EU is applied as specified in the Commission proposal for a new Own Resources Decision.

Other revenue of the EU budget includes staff contributions, revenue accruing from the administrative operation of the institutions, contributions and refunds in connection with Union agreements and programmes, interest on late payments and fines, revenue from borrowing and lending operations, revenue from fees not assigned to specific expenditure, and miscellaneous revenue – as well as surpluses from previous years. Given their inherent volatility, most of these components are difficult to forecast in the long run. Therefore, the annual amount included in the Commission proposal for the next MFF of July 2025 (i.e. EUR 3 billion) is assumed to remain nominally constant over the forecast period.

Since 2021, in addition to the above-mentioned items, other revenue of the EU budget includes the United Kingdom's contribution related to outstanding commitments (RAL) for which the United Kingdom is liable, pension obligations and other components of the financial settlement, as laid down in the Withdrawal Agreement^{xix}. This is also reflected in the proposed financing of the draft budget 2027.

The contribution of the United Kingdom related to outstanding commitments on 31 December 2020 is determined by applying the United Kingdom's financing share to the forecast RAL payments for each year of the 2027-2034 period. The resulting annual contribution takes into account the payment modalities set out in Article 148 of the Withdrawal Agreement.

The forecast of other revenue includes the United Kingdom's contribution to pension liabilities for Members and EU high-level public office holders as specified in Article 142(5) of the Withdrawal Agreement. The United Kingdom contribution to staff pensions (an estimated EUR 351 million in the draft budget 2027) enters the EU budget as external assigned revenue and is therefore not part of the long-term forecast of other revenue.

In any given year, the total own resources collected by the Union may not exceed the own resources ceiling set in the Council Decision (EU, Euratom) 2020/2053 of 1.4% of EU-27 GNI, with an additional temporary increase of 0.6% of EU GNI for covering all liabilities of the Union from the borrowing on the capital markets to fund NextGenerationEU.

The proposed new Own Resources Decision sets the own resources ceilings for the period 2028–2034 as follows:

- 1.75% for the permanent ceiling.
- 0.6% for the ceiling covering all liabilities of the Union from the borrowing on the capital markets to fund NextGenerationEU.
- 0.25% for the crisis instrument, in case of activation.

The available margin under the permanent own resources ceiling (so-called headroom) is expected to decline as payments are expected to increase in 2027 compared to 2026, while the Union's gross national income is expected to increase proportionally less over the same year. The margin under the permanent own resources ceiling in 2027 will be around EUR 84 billion.

For 2028–2034, the margin under the new permanent ceiling proposed by the Commission is estimated at EUR 155 billion per year on average and the margin under the NGEU temporary ceiling at EUR 116 billion on average. This reflects updates in the forecast EU GNI for the Spring 2026 economic forecast, the updated needs for pre-2028 RAL payments and the minimal update in non-own resources payments linked to the UK contribution under the Withdrawal Agreement.

For both the permanent and NGEU temporary own resources ceiling, the margin represents the free space below those ceilings after taking into account the own resources needed to finance the EU budget expenditures, and for the temporary ceilings – the own resources to cover the costs for NextGenerationEU interest coverage and repayments (as of 2028). This headroom is needed to cover additional outflows related to the possible materialisation of contingent liabilities and possible additional payment appropriations. Compared to the Commission Proposal for the next MFF in July 2025, there are additional contingent liabilities due to the Ukraine Support Loan which need to be covered via the headroom (i.e. the principal amount of EUR 90 billion and the associated financing costs).

4. Conclusions

The forecast confirms that the payment ceiling proposed by the Commission for the 2028–2034 MFF remains sufficient to cover the expenditure currently expected over the period.

Compared with the estimates underlying the Commission proposal of July 2025, the forecast for payments related to commitments entered into before 2028 has been revised downwards. This reflects stronger implementation and higher payment execution during the final years of the current MFF, resulting in a lower stock of outstanding commitments at the end of 2027. The profile of payments stemming from pre-2028 commitments nevertheless remains dependent on implementation developments in 2026 and 2027.

At the same time, the forecast for payments linked to programmes proposed under the 2028–2034 MFF continues to be based on the Commission proposal of 2025. As negotiations on the future MFF are ongoing, parameters affecting future payment needs remain subject to change.

The differences currently observed between the forecast level of payments and the proposed payment ceiling is subject to change, as payment requirements under the next MFF cannot yet be fully established. The reduction in estimated payments related to pre-2028 commitments reflects updated information on legacy needs, whereas the payment profile of future programmes remains provisional.

The current forecast should therefore be regarded as an intermediate assessment based on the Commission proposal and the information available at this stage.

The forecast also points to a more contained level of outstanding commitments relative to the size of the EU economy and of the future MFF. This positive development reflects both the stronger implementation observed towards the end of the current programming period and the implementation profile under the Commission proposal for the MFF 2028-2034.

The revenue to finance the budget follows the MFF expenditure cycle. The proposed package of new own resources is expected to reduce the burden on Member States' VAT and GNI-based contributions.

Annex II – Results of the forecast

All values are in billions of EUR, current prices, unless otherwise specified. Some totals may not tally due to rounding.

Table 1.1 – Long-term forecast of future outflows over 2027-2034 for the MFF

Year	2027	2028	2029	2030	2031	2032	2033	2034	TOTAL
Commitment Ceiling	188.8	269.5	282.9	283.1	290.4	294.1	285.4	279.7	2 173.7

* In line with the draft budget for 2027 for year 2027, including the Ukraine Reserve allocation and appropriations stemming from Article 5 of the MFF Regulation and Article 15(3) of the Financial Regulation and Article 15(3) of the Financial Regulation.

** The amounts for special instruments in 2027 cover the Solidarity and Emergency Aid Reserve, the European Globalisation Adjustment Fund, the Brexit Adjustment Reserve, the Ukraine Reserve, the EURI Instrument, and the Flexibility Instrument. For subsequent years, only the payments on outstanding commitments for the Flexibility Instrument and the Ukraine Reserve, including for the Ukraine Support Loan debt service cost, are included. In the subsequent tables, the payments related to the mobilisations of special instruments are included within the respective headings.

Table 1.2 – Payments in relation to the commitments of the 2021–2027 MFF

MFF Heading	2027	2028	2029	2030	2031	2032	2033	Total

* Corresponds to DB2027 figures, based on Own Resources Decision 2020.

** Own Resources ceiling - calculated based on the Spring 2026 economic forecast for the gross national income of the EU-27

*** Traditional own resources are estimated on the basis of a 10% retention rate for collection costs for 2028-2034.

ⁱ Regulation (EU, Euratom) 2024/2509 of the European Parliament and of the Council of 23 September 2024 on the financial rules applicable to the general budget of the Union (recast), OJ L 2024/2559, 26.9.2024.

ⁱⁱ COM(2021)343, 30.6.2021. This is the first edition of this report for the 2021–27 MFF period.

ⁱⁱⁱ Council Regulation (EU, Euratom) 2024/765 of 29 February 2024 amending Regulation (EU, Euratom) 2020/2093 laying down the multiannual financial framework for the years 2021 to 2027, OJ L, 2024/765, 29.02.2024.

^{iv} Proposal for a Council Regulation laying down the multiannual financial framework for the years 2028 to 2034. COM/2025/571 final. 16.07.2025.

^v Proposal for a COUNCIL DECISION on the system of own resources of the European Union and repealing Decision (EU, Euratom) 2020/2053. COM(2025) 574 final. 16.07.2025.

^{vi} OJ C66 I, 19.2.2019, p.1.

^{vii} Communication from the Commission to the European Parliament and the Council – Technical adjustment of the multiannual financial framework for 2027 in accordance with Article 4 of Council Regulation (EU, Euratom) 2020/2093 laying down the multiannual financial framework for the years 2021 to 2027. COM(2026) 299

^{viii} Statement of estimates of the European Commission for the financial year 2027. SEC(2026) 250.

^{ix} Council Regulation (EU, Euratom) 2024/765 of 29 February 2024 amending Regulation (EU, Euratom) 2020/2093 laying down the multiannual financial framework for the years 2021 to 2027, OJ L, 2024/765, 29.02.2024.

^x Article 5 of the MFF Regulation provides for the additional allocation in commitment and payment appropriations for a pre-defined list of programmes, for an amount equivalent to certain types of fines.

^{xi} Article 15(3) of the Financial Regulation provides that commitment appropriations corresponding to the amount of de-commitments made in relation to research projects may be made available again.

^{xii} Unless otherwise specified, all amounts in the report are expressed in current prices.

^{xiii} Report from the Commission to the European Parliament and the Council. Long-term forecast of future inflows and outflows of the EU budget (2026–2034). COM(2025) 573 final. 16.07.2025.

^{xiv} Draft amending budget no. 2 to the general budget 2026. Update of revenue (own resources) and adjustments to expenditure. COM(2026) 460 final. 09.06.2026.

^{xv} Member States decided to transfer funds between direct payments and rural development. The result was set out in Commission Delegated Regulation (EU) 2026/1 of 1 December 2025 amending Regulation (EU) 2021/2115.

^{xvi} Regulation (EU) 2026/467 of the European Parliament and of the Council of 24 February 2026 implementing enhanced cooperation on the establishment of the Ukraine Support Loan for 2026 and 2027.

^{xvii} This amount does not include decommitments and payments from other fund sources, such as assigned revenues.

^{xviii} Directive 2003/87/EC of the European Parliament and of the Council of 13 October 2003 establishing a scheme for greenhouse gas emission allowance trading within the Community and amending Council Directive 96/61/EC

^{xix} All components of the United Kingdom contribution are laid down in Article 148 of the Withdrawal Agreement. The forecast only includes components which are quantifiable at this stage, namely the provisional United Kingdom contribution to the financing of payments resulting from outstanding commitments prior to 2021 for which the United Kingdom is liable under Article 140 and pension liabilities specified under Article 142.5 of the Withdrawal Agreement as well as the amounts the Union owes to the United Kingdom under Article 145 (European Coal and Steel Community) and Article 146 (Union investment in the EIF).
