NOTE

From:	General Secretariat of the Council
To:	Permanent Representatives Committee
Subject:	Proposal for a REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL on the labelling of tyres with respect to fuel efficiency and other [] parameters, amending Regulation (EU) 2017/1369 and repealing Regulation (EC) No 1222/2009

1. The Commission adopted the above mentioned proposal on 17 May 2018 within the broader package of measures on Low Carbon Mobility. While repealing Regulation (EC) No 1222/2009 on the labelling of tyres with respect to fuel efficiency and other essential parameters¹, the objectives of this proposal are to clarify and extend the scope of the current regulatory framework.
2. Further to intense discussions at the level of the Energy Working Party, the Council reached a General Approach on 4 March 2019 (ref. to document: 6695/19).
3. The first informal trilogue on the above proposal was held on 10 October. This was a meet-and-greet meeting during which the Presidency presented the Council's General Approach and listened to the European Parliament's position. The two co-legislators reached the objectives of this trilogue, namely to:

¹ OJ L 342, 22.12.2009.

- identify the political and technical issues; and

- mandate further work to technical level, i.e. drafting suggestions to address technical issues and exploring compromise solutions as regards political issues.

4. In the light of this, the technical level intensively worked on the file and four technical meetings were held between mid-October and beginning of November, in addition to continuous informal contacts exchanged amongst the actors involved.
5. The technical level reached well-balanced compromise proposals as regards technical issues that the Permanent Representatives Committee can find in the fourth-column of the Annex to this note.
6. As regards political issues, the Presidency explored compromise solutions together with the European Parliament, while testing also its flexibilities.
7. Such political issues are currently indicated in the fourth-column of the Annex to this note with the following reference "*political issue to be discussed at the informal trilogue*" (or any similar).
8. In the light of the above, the Permanent Representatives Committee is invited to:
 - a) confirm its support to the compromise proposals as regards technical issues, indicated in the fourth-column of the Annex to this note; and
 - b) express its flexibilities and red lines as regards political issues, which are the following:
 - re-treaded tyres (Articles 2(1)(2) and 11a, EP AM 35 and recitals 14, 28 and 30a;
 - mileage and abrasion (Articles 3(19), 14 and 14a and recitals 13 and 13a). In particular, the Presidency is seeking guidance on the date for earlier revision;
 - rescaling and cleaning up of the classes (Article 12 and Annexes I, part A, B and C, II and V);
 - overall dates (Articles 5(1)(2), 10(4), 14, 16 and 17).

	COMISSION PROPOSAL (COD 2018/0148 - doc. 9185/18 +ADD1)	EP ADOPTED TEXT	COUNCIL GENERAL APPROACH (doc. ST 6695/19)	Presidency compromise proposals

ANNEX I
Testing, grading and measurement of tyre parameters

COMMISSION PROPOSAL

Part A: Fuel efficiency classes

The fuel efficiency class shall be determined and illustrated on the label on the basis of the rolling resistance coefficient (*RRC*) according to the ‘A’ to ‘G’ scale specified below and measured in accordance with Annex 6 to UNECE Regulation No 117 and its subsequent amendments and aligned according to the procedure laid down in Annex VI.

If a tyre type is approved for more than one tyre class (e.g. C1 and C2), the grading scale used to determine the fuel efficiency class of this tyre type shall be that which is applicable to the highest tyre class (e.g. C2, not C1).

C1 tyres		C2 tyres		C3 tyres	
<i>RRC in kg/t</i>	<i>Fuel efficiency class</i>	<i>RRC in kg/t</i>	<i>Fuel efficiency class</i>	<i>RRC in kg/t</i>	<i>Fuel efficiency class</i>

Part C: External rolling noise classes and measured value

The external rolling noise measured value (N) shall be declared in decibels and calculated in accordance with Annex 3 to UNECE Regulation No 117.

The external rolling noise class shall be determined and illustrated on the label on the basis of the limit values (*LV*) set out in Part C of Annex II of Regulation (EC) No 661/2009 as follows.

N in dB

External rolling noise class

$$N \leq LV - 6$$

$$LV - 6 < N \leq LV - 3$$

$$N > LV - 3$$

Part D: Snow grip

The snow performance shall be tested in accordance with Annex 7 to UNECE Regulation No 117.

A tyre which satisfies the minimum snow index values set out in UNECE Regulation No 117 shall be classified as a snow tyre and the following icon shall be included on the label.

Part E: Ice grip:

The ice performance shall be tested in accordance with ISO 19447.

A tyre which satisfies the minimum ice index value set out in ISO 19447 shall be classified as an ice tyre and the following icon shall be included on the label.

EUROPEAN PARLIAMENT ADOPTED TEXT

Amendment 44

Proposal for a regulation

Annex I – part A – paragraph 1

Text proposed by the Commission

The fuel efficiency class shall be determined and illustrated on the label on the basis of the rolling resistance coefficient (RRC) according to the ‘A’ to ‘G’ scale specified below and ***measured*** in accordance with Annex 6 to UNECE Regulation No 117 and its subsequent amendments and aligned according to the procedure laid down in Annex VI.

Amendment

The fuel efficiency class shall be determined and illustrated on the label on the basis of the rolling resistance coefficient (RRC) according to the ‘A’ to ‘G’ scale specified below and in accordance with Annex 6 to UNECE Regulation No 117 and its subsequent amendments and aligned according to the procedure laid down in Annex VI.

Amendment 45

Proposal for a regulation

Annex I – part A – paragraph 2 a (new)

Text proposed by the Commission

Amendment

F class for C1, C2, C3 tyres shall no longer be placed on the market after the full implementation of the provision of type-approval requirements of Regulation (EC) No 661/2009 and shall be shown on the label in grey.

Proposal for a regulation

Annex I – part E – paragraph 2

Text proposed by the Commission

A tyre which satisfies the minimum ice index value set out in ISO 19447 shall be classified as an ice tyre and the following icon ***shall*** be included on the label.

Amendment

A tyre which satisfies the minimum ice index value set out in ISO 19447 ***and type approved according to the snow performance in UNECE Regulation No 117*** shall be classified as an ice tyre and the following icon ***may*** be included on the label.

COUNCIL GENERAL APPROACH

Part A: Fuel efficiency classes and rolling resistance coefficient

The fuel efficiency class shall be determined and illustrated on the label on the basis of the rolling resistance coefficient (*RRC*) according to the ‘A’ to ‘G’ scale specified below and measured in accordance with Annex 6 to UNECE Regulation No 117 and its subsequent amendments and aligned according to the procedure laid down in Annex VI.

If a tyre type is approved for more than one tyre class (e.g. C1 and C2), the grading scale used to determine the fuel efficiency class of this tyre type shall be that which is applicable to the highest tyre class (e.g. C2, not C1).

C1 tyres

<u>RRC in kg/t</u>	<u>Energy efficiency class</u>
<u>$RRC \leq 6,5$</u>	<u>A</u>
<u>$6,6 \leq RRC \leq 7,7$</u>	<u>B</u>
<u>$7,8 \leq RRC \leq 9,0$</u>	<u>C</u>

Part C: External rolling noise classes and measured value

The external rolling noise measured value (N) shall be declared in decibels and calculated in accordance with Annex 3 to UNECE Regulation No 117.

The external rolling noise class shall be determined and illustrated on the label on the basis of the limit values (*LV*) set out in Part C of Annex II of Regulation (EC) No 661/2009 as follows.

||

N in dB

External rolling noise class

$N \leq LV - 3$

$LV - 3 < N \leq LV$

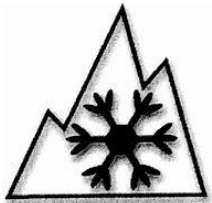

$N > LV$

Part D: Snow grip

The snow performance shall be tested in accordance with Annex 7 to UNECE Regulation No 117.

A tyre which satisfies the minimum snow index values set out in UNECE Regulation No 117 shall be classified as a snow tyre **for use in severe snow conditions** and the following icon shall be included on the label.

Part E: Ice grip:

The ice performance shall be tested in accordance with ISO 19447.

A tyre which satisfies the minimum ice index value set out in ISO 19447 shall be classified as an ice tyre and the following icon shall be included on the label.

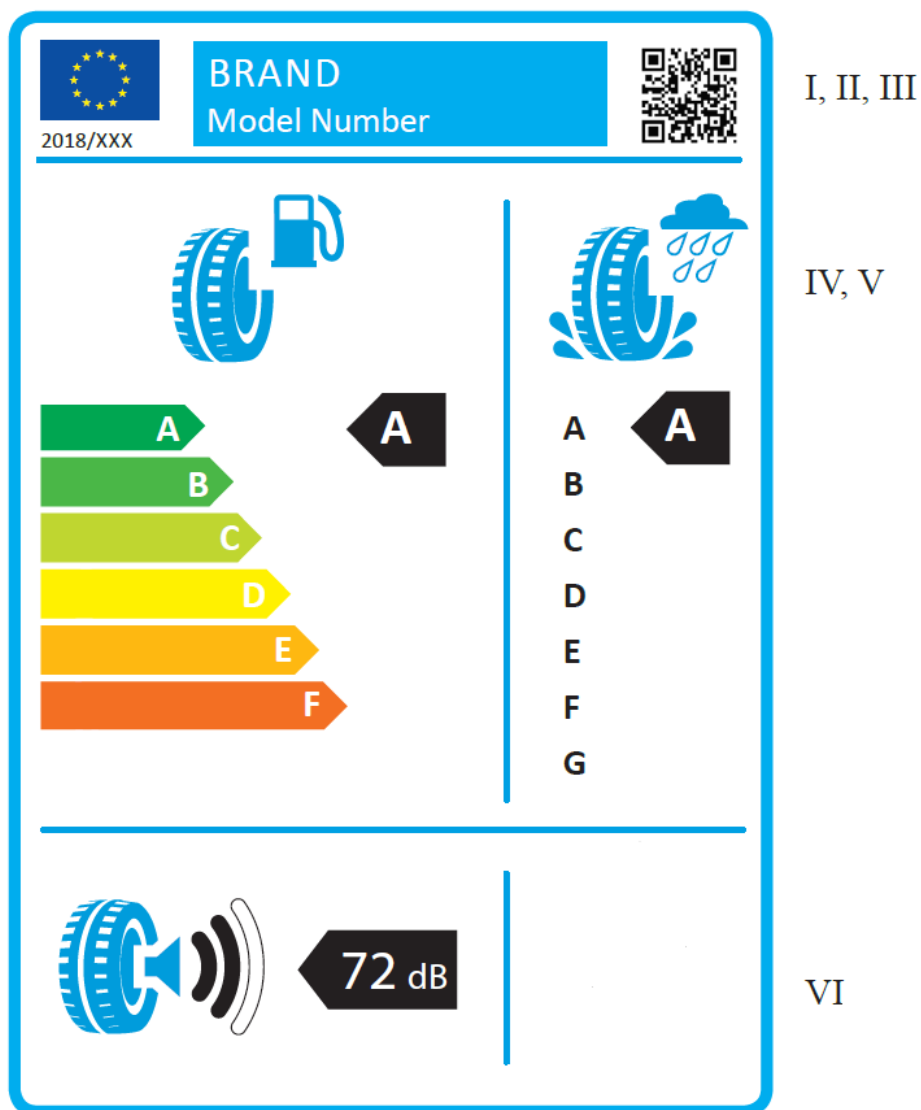

⁵² *Logo bracketed until new logo under ISO is released.*

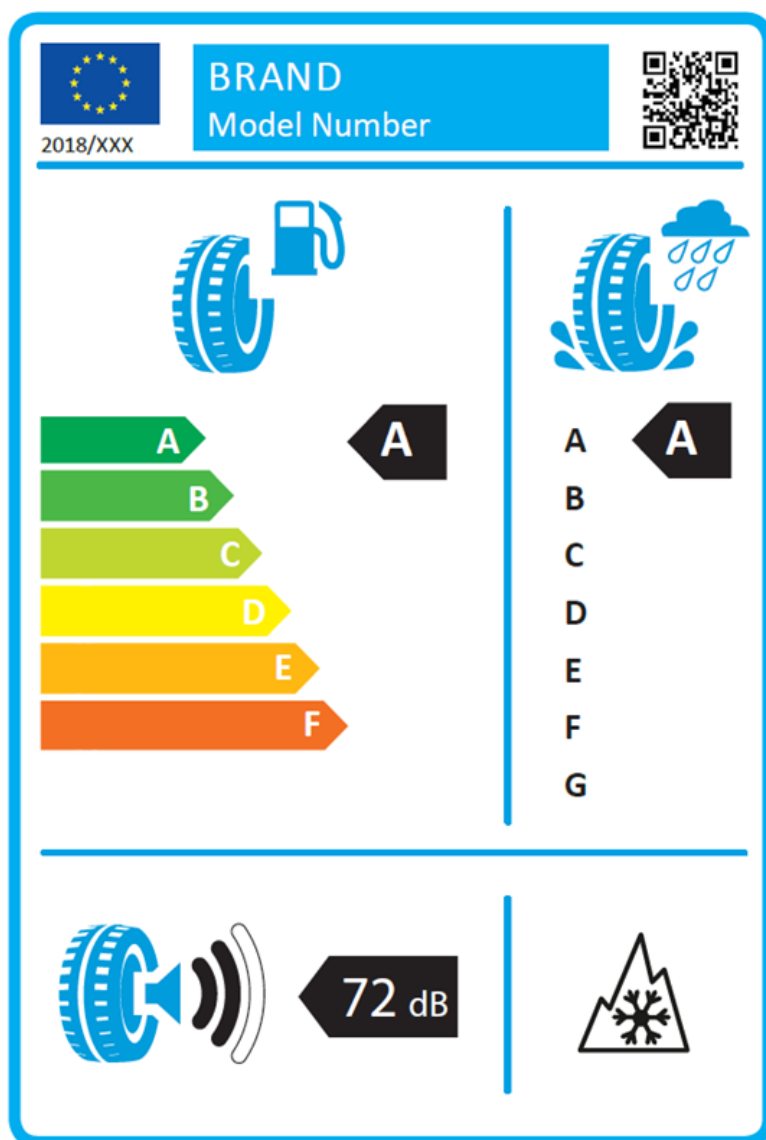

ANNEX II
Format of the label

COMMISSION PROPOSAL

1. LABELS

- 1.1 The following information shall be included in the labels in accordance with the illustrations below.

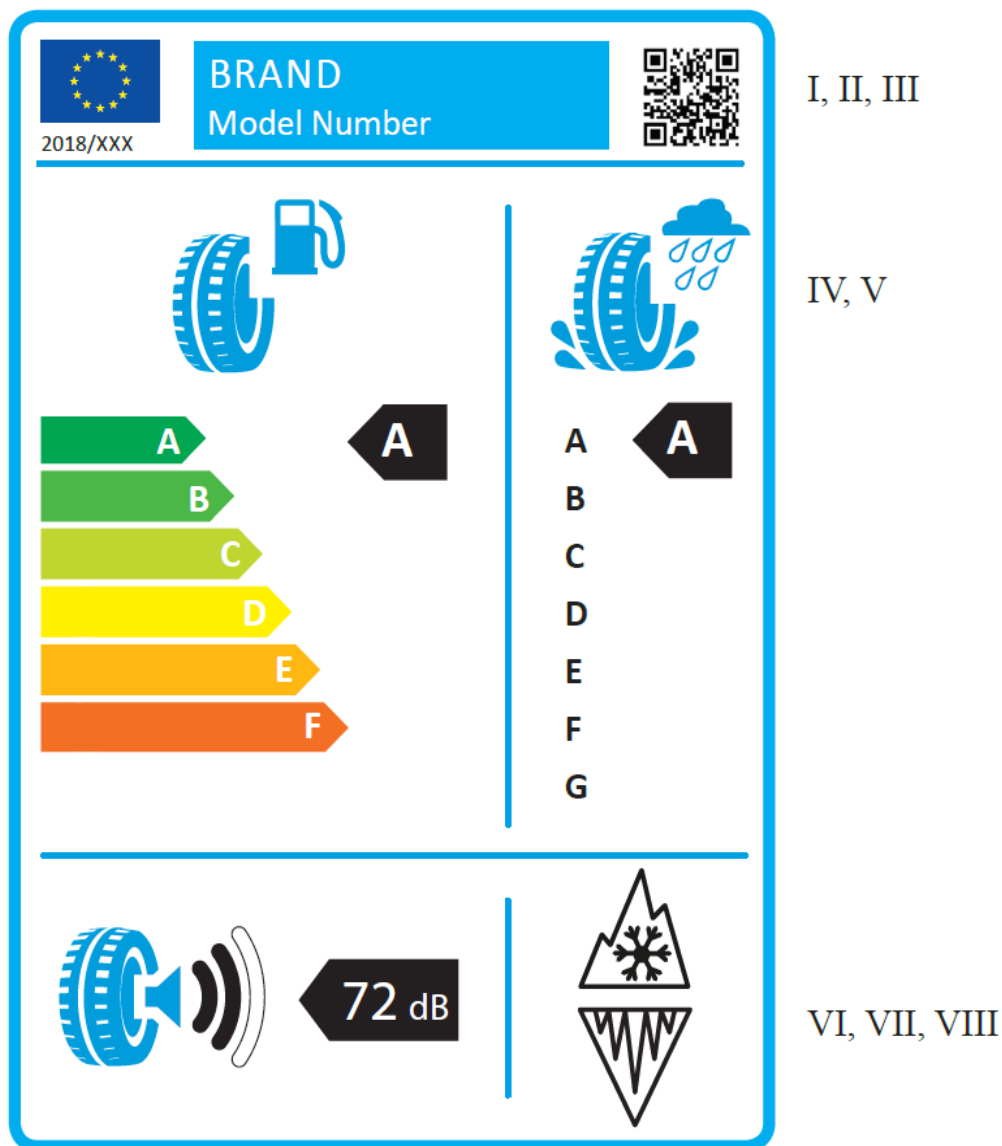

I, II, III

IV, V

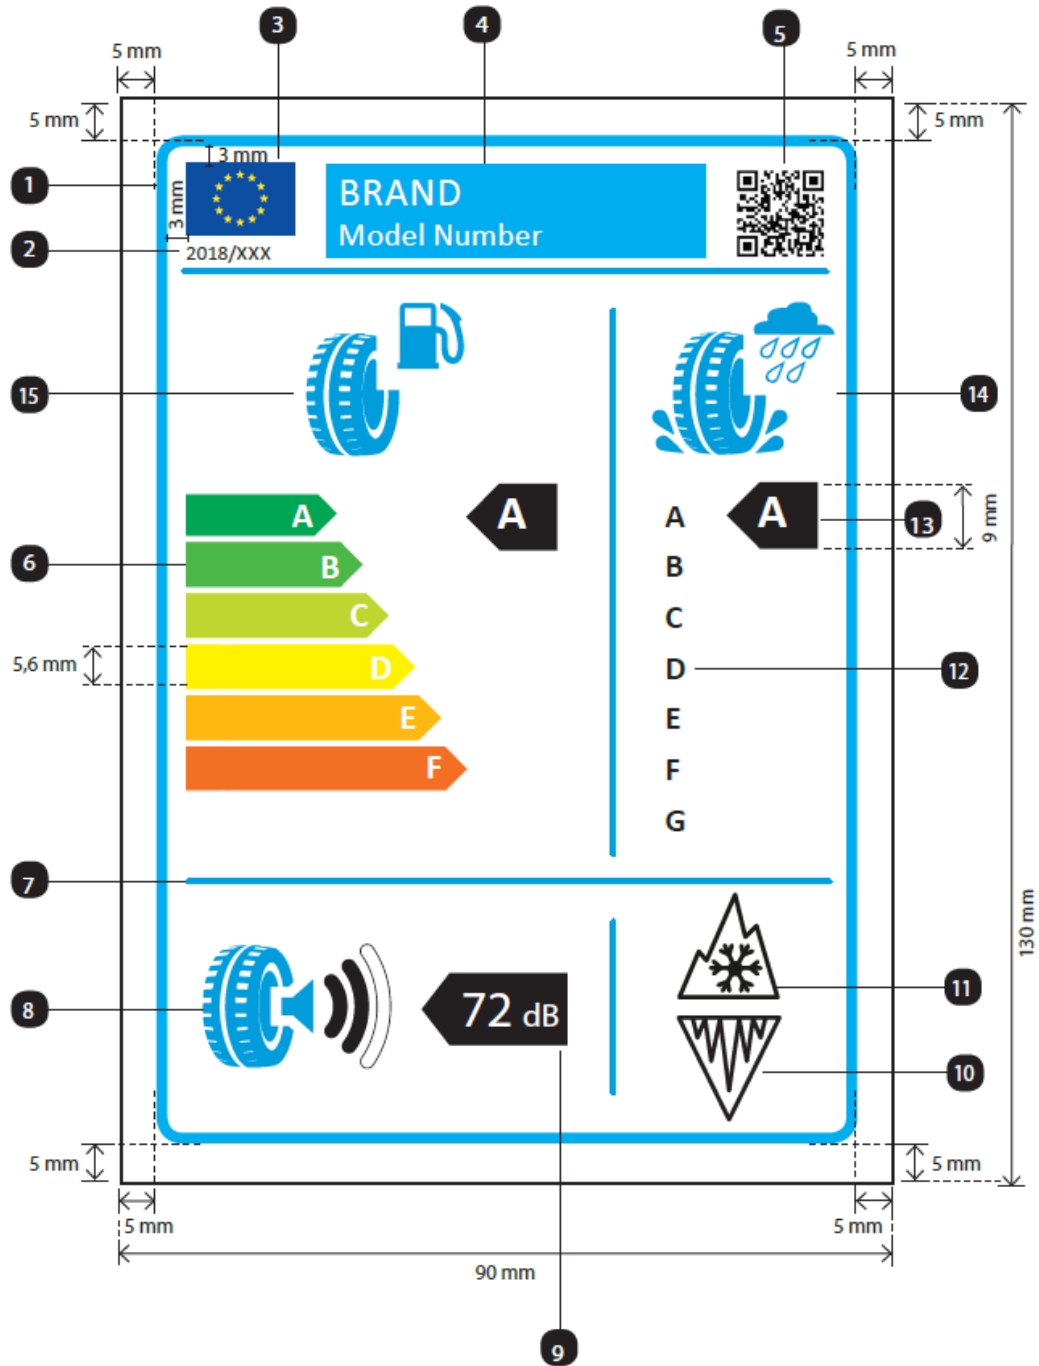

VI, VII

- I. Supplier's name or trademark;
- II. Supplier's model identifier, where 'model identifier' means the code, usually alphanumeric, which distinguishes a specific tyre type from other type with the same trade mark or supplier's name;
- III. QR code;
- IV. Fuel efficiency;
- V. Wet grip;
- VI. External rolling noise;
- VII. Snow grip;
- VIII. Ice grip.

2. LABEL DESIGN

2.1 The design of the label shall be as in the figure below:

- 1.3 The label shall be at least 90 mm wide and 130 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
- 1.4 The label shall conform to the following requirements:
- (b) Colours are CMYK - cyan, magenta, yellow and black - and are given following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black;
 - (c) The numbers listed below refer to the legends indicated in point 2.1.:
 - (1) Label border: stroke: 1,5 pts - colour: X-10-00-05;
 - (2) Calibri regular 8 pts;
 - (3) European flag: width: 15 mm, height: 10 mm;
 - (4) Banner: width: 51,5 mm, height: 13 mm;
Text "BRAND": Calibri regular 15 pts, 100 % white;
Text "Model Number": Calibri regular 13 pts, 100 % white;
 - (5) QR code: width: 13 mm, height: 13 mm;
 - (6) 'A' to 'F' scale:
Arrows: height: 5,6 mm, gap: 0,78 mm, black stroke: 0,5 pt - colours:
 - A: X-00-X-00;
 - B: 70-00-X-00;
 - C: 30-00-X-00;
 - D: 00-00-X-00;
 - E: 00-30-X-00;
 - F: 00-70-X-00.
 - (7) Line: width: 88 mm, height: 2 pts - Colour: X-00-00-00;
 - (8) Pictogram external rolling noise:
Pictogram as supplied: width: 25,5 mm, height: 17 mm - colour: X-10-00-05;
 - (9) Arrow:
Arrow: width: 20 mm, height: 10 mm, 100 % black;

Text: Helvetica Bold 20 pts, 100 % white;

Unit text: Helvetica Bold 13 pts, 100 % white;

(10) Pictogram ice:

Pictogram as supplied: width: 15 mm, height: 15 mm – stroke: 1,5 pts - colour: 100 % black;

(11) Pictogram snow:

Pictogram as supplied: width: 15 mm, height: 15 mm – stroke: 1,5 pts - colour: 100 % black;

(12) ‘A’ to ‘G’: Calibri regular 13 pts – 100% black;

(13) Arrows:

Arrows: width: 11,4 mm, height: 9 mm, 100 % black;

Text: Calibri Bold 17 pts, 100 % white;

(14) Pictogram fuel efficiency:

Pictogram as supplied: width: 19,5 mm, height: 18,5 mm - colour: X-10-00-05;

(15) Pictogram wet grip:

Pictogram as supplied: width: 19 mm, height: 19 mm - colour: X-10-00-05.

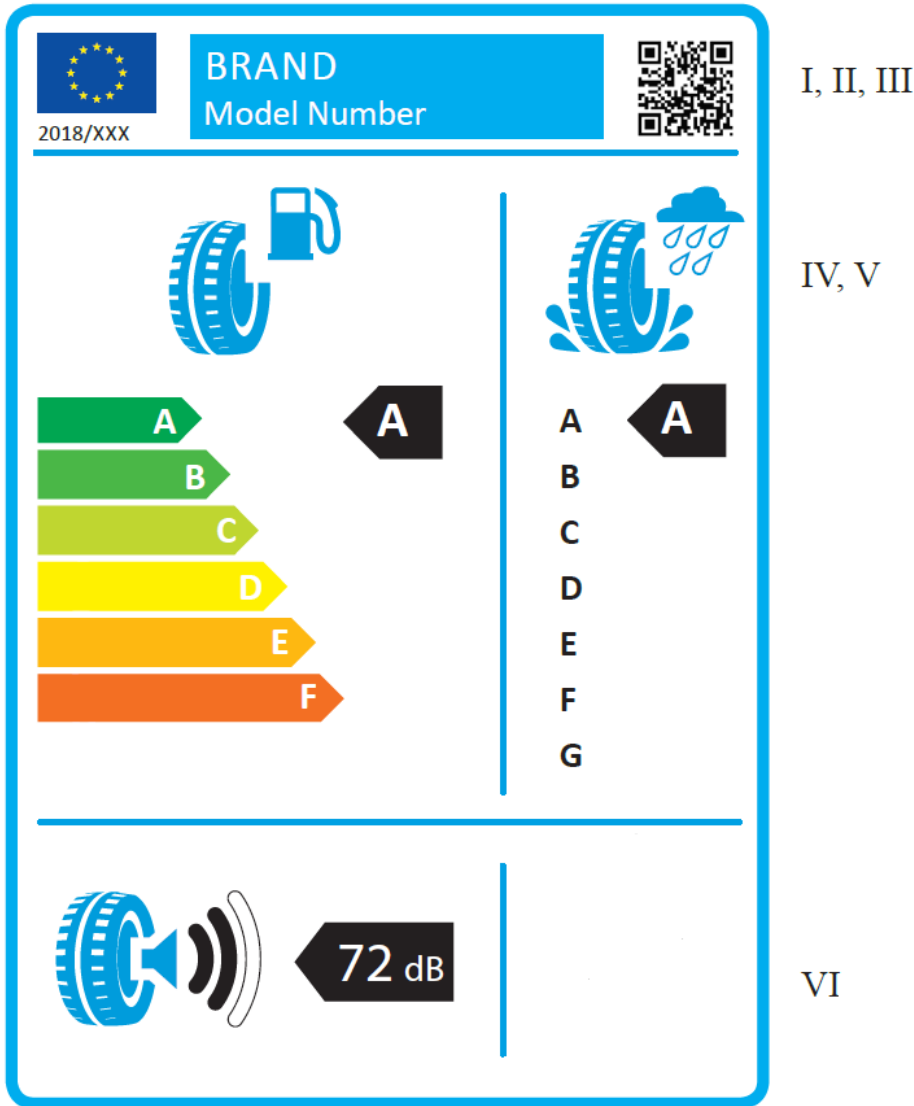

(d) The background shall be white.

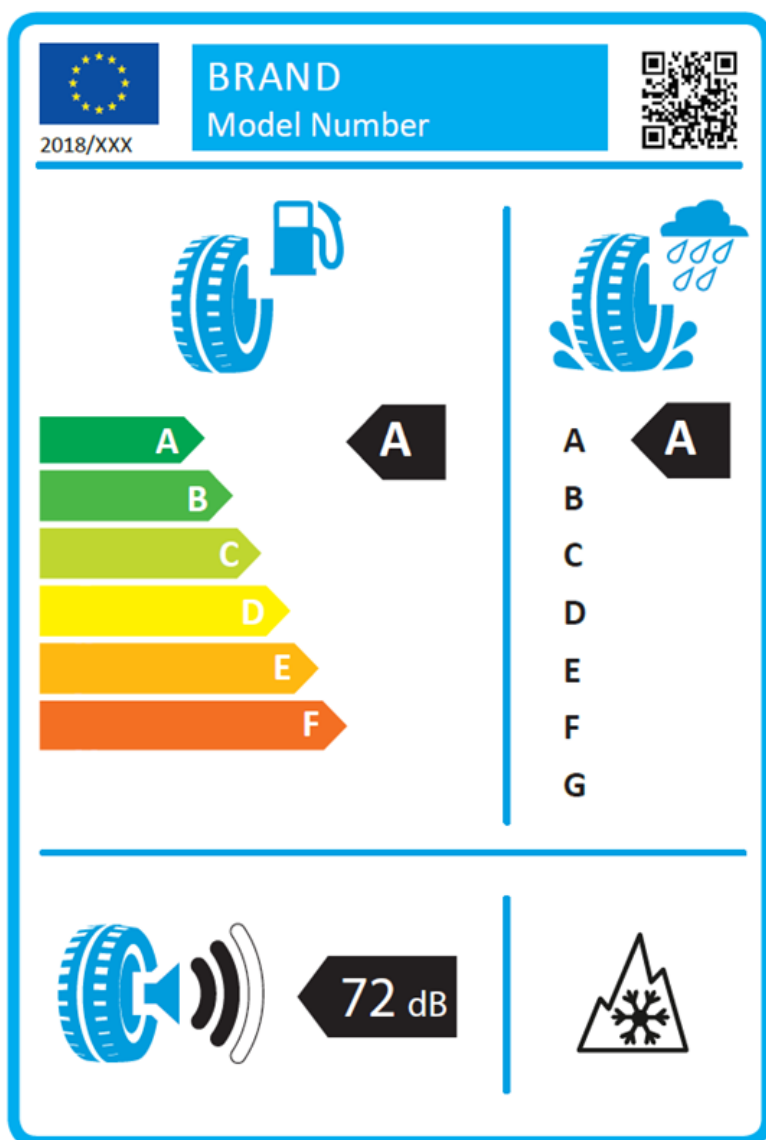

- 1.5 The tyre class shall be indicated on the label in the format prescribed in the illustration in point 2.1.

COUNCIL GENERAL APPROACH

1. LABELS

1.1 The following information shall be included in the labels in accordance with the illustrations below:-

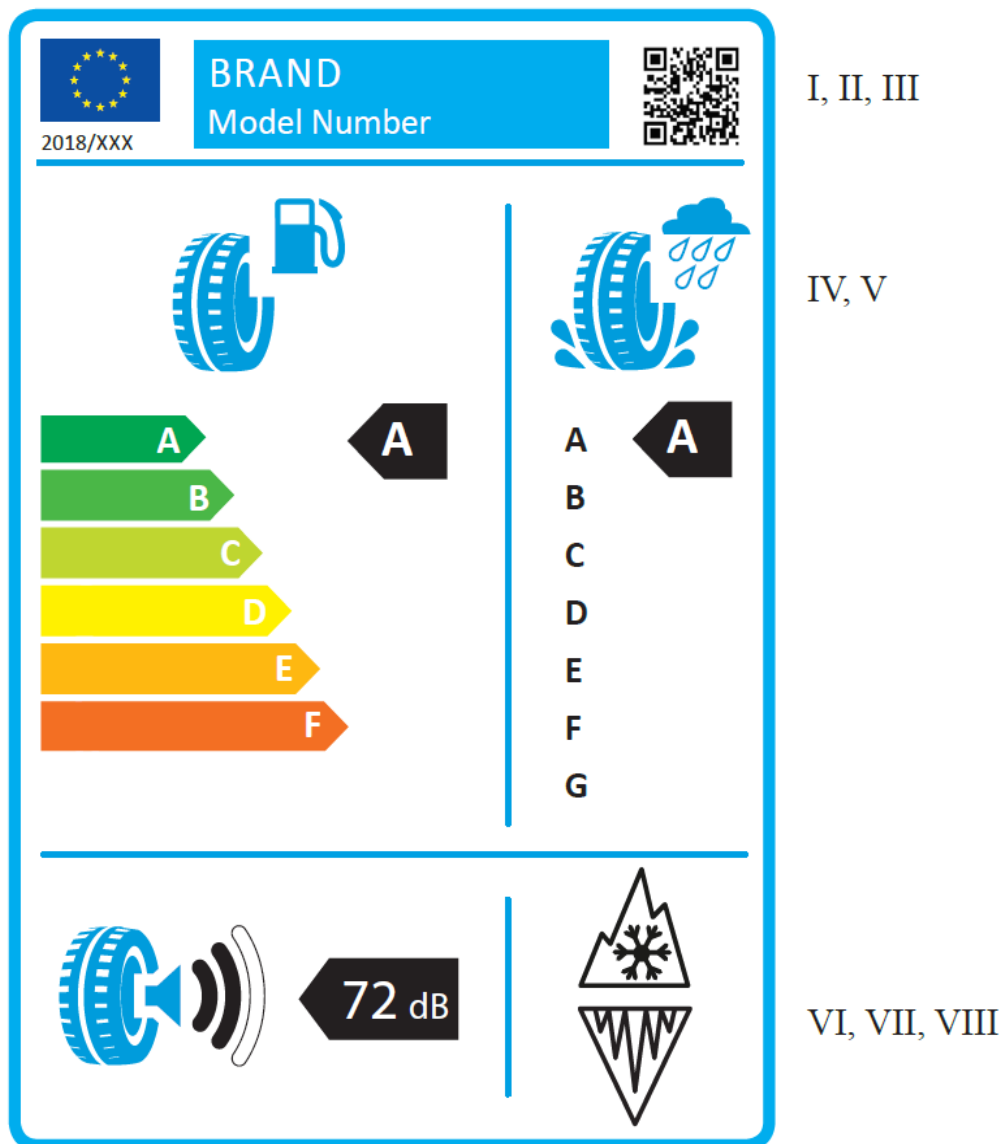

I, II, III

IV, V

VI, VII

- I. **[] The trade** name or trade mark **of the supplier**;
- II. **[] The** model identifier **of the supplier**, where ‘model identifier’ means the code, usually alphanumeric, which distinguishes a specific tyre type from other **tyre** types with the same trade **name or trade** mark **[] of the** supplier[];
- III. QR code;
- IV. Fuel efficiency;

V. Wet grip **performance**;

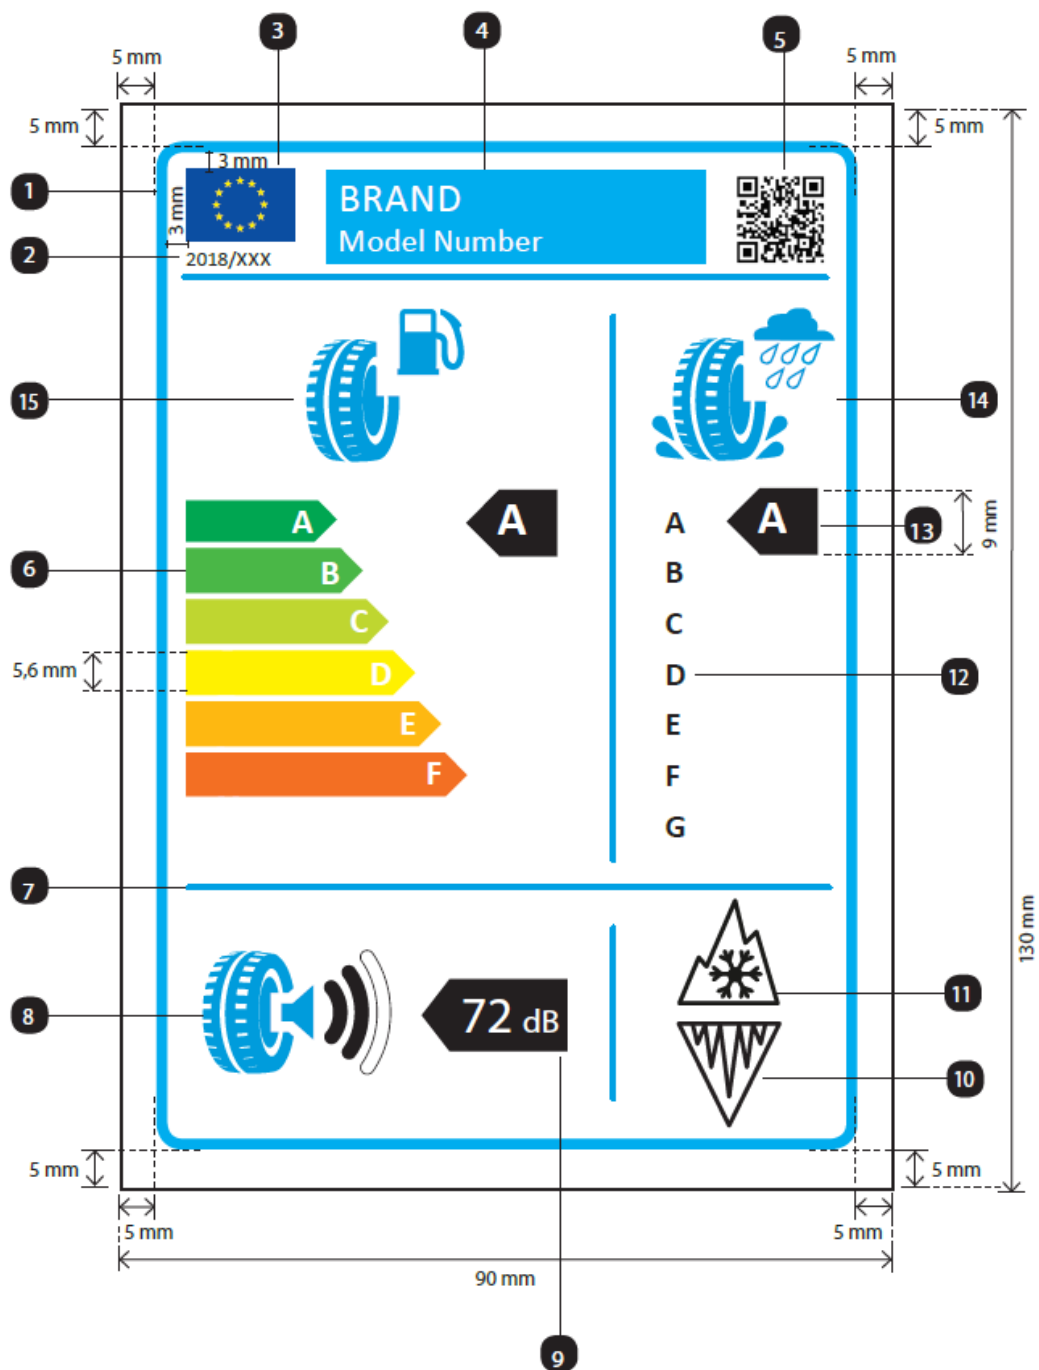

VI. External rolling noise;

VII. Snow grip **performance**;

VIII. Ice grip **performance**.

2. LABEL DESIGN

2.1 The design of the label shall be as in the figure below:

2.2 The label shall be at least 90 mm wide and 130 mm high. Where the label is printed in a larger format, [] **the** content **of the label** shall [] remain proportionate to the specifications above.

2.3 The label shall [] **meet** the following requirements:

(a) Colours are CMYK - cyan, magenta, yellow and black - and are given following this example: 00-70-X-00: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black;

(b) The numbers listed below refer to the legends indicated in point 2.1.:

(1) Label border: stroke: 1,5 pts - colour: X-10-00-05;

(2) Calibri regular 8 pts;

(3) European flag: width: 15 mm, height: 10 mm;

(4) Banner: width: 51,5 mm, height: 13 mm;

Text "BRAND": Calibri regular 15 pts, 100 % white;

*Text "Model [] **identifier**":* Calibri regular 13 pts, 100 % white;

(5) QR code: width: 13 mm, height: 13 mm;

(6) 'A' to 'F' scale:

Arrows: height: 5,6 mm, gap: 0,78 mm, black stroke: 0,5 pt - colours:

– A: X-00-X-00;

– B: 70-00-X-00;

– C: 30-00-X-00;

- D: 00-00-X-00;
 - E: 00-30-X-00;
 - F: 00-70-X-00.
- (7) Line: width: 88 mm, height: 2 pts - Colour: X-00-00-00;
- (8) Pictogram external rolling noise:
- Pictogram as supplied: width: 25,5 mm, height: 17 mm - colour: X-10-00-05;
- (9) Arrow:
- Arrow*: width: 20 mm, height: 10 mm, 100 % black;
- Text*: Helvetica Bold 20 pts, 100 % white;
- Unit text*: Helvetica Bold 13 pts, 100 % white;
- (10) Pictogram ice:
- Pictogram as supplied: width: 15 mm, height: 15 mm – stroke: 1,5 pts - colour: 100 % black;
- (11) Pictogram snow:
- Pictogram as supplied: width: 15 mm, height: 15 mm – stroke: 1,5 pts - colour: 100 % black;
- (12) ‘A’ to ‘G’: Calibri regular 13 pts – 100% black;
- (13) Arrows:
- Arrows*: width: 11,4 mm, height: 9 mm, 100 % black;
- Text*: Calibri Bold 17 pts, 100 % white;

(14) Pictogram fuel efficiency:

Pictogram as supplied: width: 19,5 mm, height: 18,5 mm - colour: X-10-00-05;

(15) Pictogram wet grip:

Pictogram as supplied: width: 19 mm, height: 19 mm - colour: X-10-00-05.

(c) The background shall be white.

2.4 The tyre class shall be indicated on the label in the format **[] of** the illustration in point 2.1.

ANNEX III
Technical documentation

COMMISSION PROPOSAL

The technical documentation referred to in Article 4(7) shall include the following:

- (e) the name and address of the supplier;
- (f) identification and signature of the person empowered to bind the supplier;
- (g) trade name or trade mark of the supplier;
- (h) the tyre model,
- (i) the tyre dimension, load index and speed rating;
- (j) the references of the measurement methods applied.

COUNCIL GENERAL APPROACH

II

ANNEX IV
Product information sheet

COMMISSION PROPOSAL

The information in the product information sheet of tyres shall be included in the product brochure or other literature provided with the product and shall include the following:

- (k) supplier's name or trade mark;
- (l) supplier's model identifier;
- (m) fuel efficiency class of the tyre in accordance with Annex I;
- (n) wet grip class of the tyre in accordance with Annex I;
- (o) external rolling noise class and decibels in accordance with Annex I;
- (p) whether the tyre is a snow tyre;
- (q) whether the tyre is an ice tyre.

COUNCIL GENERAL APPROACH

The information in the product information sheet of tyres shall be included in the product brochure or other literature provided with the [] **tyre** and shall include the following:

- (a) [] **the trade** name or trade mark **of the supplier, or of the manufacturer if it is not the same as the supplier;**
- (b) [] **the** model identifier **of the supplier;**
- (c) **the** fuel efficiency class of the tyre in accordance with Annex I;
- (d) **the** wet grip class of the tyre in accordance with Annex I;
- (e) **the** external rolling noise class and decibels in accordance with Annex I;
- (f) whether the tyre is a snow tyre **for use in severe snow conditions;**
- (g) whether the tyre is an ice tyre;
- (h) **the date of production of the tyre.**

*ANNEX V***Information provided in technical promotional material****COMMISSION PROPOSAL**

5. Information on tyres included in technical promotional material shall be provided in the order specified as follows:
- (b) the fuel efficiency class (letter ‘A’ to ‘F’);
 - (c) the wet grip class (letter ‘A’ to ‘G’);
 - (d) the external rolling noise class and measured value (dB);
 - (e) whether the tyre is a snow tyre;
 - (f) whether the tyre is an ice tyre.
6. The information provided in point 1 shall meet the following requirements:
- (g) be easy to read;
 - (h) be easy to understand;
 - (i) if different grading is available for a given tyre type depending on dimension or other parameters, the range between the least and best performing tyre is stated.
7. Suppliers shall also make the following available on their websites:
- (j) a link to the relevant Commission webpage dedicated to this Regulation;
 - (k) an explanation of the pictograms printed on the label;
 - (l) a statement highlighting the fact that actual fuel savings and road safety depend heavily on the behaviour of drivers, and in particular the following:
 - eco-driving can significantly reduce fuel consumption;
 - tyre pressure needs to be regularly checked to optimise wet grip and fuel efficiency performance;
 - stopping distances must always be strictly respected.

COUNCIL GENERAL APPROACH

8. Information on tyres included in technical promotional material shall be provided in the **following** order []:
- (a) the fuel efficiency class (letter 'A' to 'F');
 - (b) the wet grip class (letter 'A' to 'G');
 - (c) the external rolling noise class and measured value (dB);
 - (d) whether the tyre is a snow tyre;
 - (e) whether the tyre is an ice tyre.
9. The information [] **referred to** in point 1 shall meet the following requirements:
- (a) **it shall** be easy to read;
 - (b) **it shall** be easy to understand;
 - (c) if different grading is available for a given tyre type depending on dimension or other parameters, the range between the least and best performing tyre [] **shall be** stated.
10. Suppliers shall also make the following available on their websites:
- (a) a link to the relevant Commission webpage dedicated to this Regulation;
 - (b) an explanation of the pictograms printed on the label;
 - (c) a statement highlighting the fact that actual fuel savings and road safety depend heavily on the behaviour of drivers, and in particular **on** the following:
 - eco-driving can significantly reduce fuel consumption;
 - tyre pressure needs to be regularly checked to optimise wet grip **performance** and fuel efficiency [];
 - stopping distances must always be [] respected.

ANNEX VI**Laboratory alignment procedure for the measurement of rolling resistance****COMMISSION PROPOSAL****1. DEFINITIONS**

For the purposes of the laboratory alignment procedure, the following definitions shall apply:

11. 'reference laboratory' means a laboratory that is part of the network of laboratories the name of which have been published for the purpose of the alignment procedure in the *Official Journal of the European Union*, and is able to achieve the accuracy of test results determined in Section 3 with its reference machine;
12. 'candidate laboratory' means a laboratory participating in the alignment procedure that is not a reference laboratory;
13. 'alignment tyre' means a tyre that is tested for the purpose of performing the alignment procedure;
14. 'alignment tyres set' means a set of five or more alignment tyres for the alignment of one single machine;
15. 'assigned value' means a theoretical value of the Rolling Resistance Coefficient (RRC) of one alignment tyre as measured by a theoretical laboratory which is representative of the network of reference laboratories that is used for the alignment procedure;
16. 'machine' means every tyre testing spindle in one specific measurement method. For example, two spindles acting on the same drum shall not be considered as one machine.

2. GENERAL PROVISIONS**2.1. Principle**

The measured (m) Rolling Resistance Coefficient in a reference laboratory (l), ($RRC_{m,l}$), shall be aligned to the assigned values of the network of reference laboratories.

The *measured (m) Rolling Resistance Coefficient obtained by a machine in a candidate laboratory (c)*, $RRC_{m,c}$, shall be aligned through one reference laboratory of the network of its choice.

2.2. Tyre selection requirements

A set of five or more alignment tyres shall be selected for the alignment procedure in compliance with the criteria below. One set shall be selected for C1 and C2 tyres together, and one set for C3 tyres.

- (a) The set of alignment tyres shall be selected so as to cover the range of different RRC_s of C1 and C2 tyres together, or of C3 tyres. In any event, the difference between the highest RRC_m of the tyre set, and the lowest RRC_m of the tyre set shall be, before and after alignment, at least equal to:
 - (i) 3 kg/t for C1 and C2 tyres; and
 - (ii) 2 kg/t for C3 tyres.
- (b) The RRC_m in the candidate or reference laboratories ($RRC_{m,c}$ or $RRC_{m,l}$) based on declared RRC values of each alignment tyre of the set shall be distributed evenly.
- (c) Load index values shall adequately cover the range of the tyres to be tested, ensuring that the rolling resistance force values also cover the range of the tyres to be tested.

Each alignment tyre shall be checked prior to use and replaced when:

- (a) it shows a condition which makes it unusable for further tests; and/or
- (b) there are deviations of $RRC_{m,c}$ or $RRC_{m,l}$ greater than 1,5 per cent relative to earlier measurements after correction for any machine drift.

2.3. Measurement method

The reference laboratory shall measure each alignment tyre four times and retain the three last results for further analysis, in accordance with paragraph 4 of Annex 6 of UNECE Regulation No 117 and its subsequent amendments and applying the conditions set out in paragraph 3 of Annex 6 of UNECE Regulation No 117 and its subsequent amendments.

The candidate laboratory shall measure each alignment tyre ($n + 1$) times with n being specified in Section 5 and retain the n last results for further analysis, in accordance with paragraph 4 of Annex 6 of UNECE Regulation No 117 and its subsequent amendments and applying the conditions set out in paragraph 3 of Annex 6 of UNECE Regulation No 117 and its subsequent amendments.

Each time an alignment tyre is measured, the tyre/wheel assembly shall be removed from the machine and the entire test procedure specified in paragraph 4 of Annex 6 of UNECE Regulation No 117 and its subsequent amendments shall be followed again from the start.

The candidate or reference laboratory shall calculate:

- (a) the measured value of each alignment tyre for each measurement as specified in Annex 6, paragraphs 6.2 and 6.3, of UNECE Regulation No 117 and its subsequent amendments (i.e. corrected for a temperature of 25 °C and a drum diameter of 2 m);
- (b) the mean value of the three (in the case of reference laboratories) or n (in the case of candidate laboratories) last measured values of each alignment tyre; and
- (c) the standard deviation (σ_m) as follows:

$$\sigma_m = \sqrt{\frac{1}{p} \cdot \sum_{i=1}^p \sigma_{m,i}^2}$$

$$\sigma_{m,i} = \sqrt{\frac{1}{n-1} \cdot \sum_{j=2}^{n+1} \left(Cr_{i,j} - \frac{1}{n} \cdot \sum_{j=2}^{n+1} Cr_{i,j} \right)^2}$$

where:

i is the counter from 1 to p for the alignment tyres;

j is the counter from 2 to n+1 for the n last repetitions of each measurement of a given alignment tyre

n+1 is the number of repetitions of tyre measurements (n+1=4 for reference laboratories and

n+1 ≥ 4 for candidate laboratories);

p is the number of alignment tyres (p ≥ 5).

2.4. Data formats to be used for the computations and results

- The measured RRC values corrected from drum diameter and temperature shall be rounded to 2 decimal places.
- Then the computations shall be made with all digits: there shall be no further rounding except on the final alignment equations.
- All standard deviation values shall be displayed to 3 decimal places.
- All RRC values will be displayed to 2 decimal places.
- All alignment coefficients (A1_l, B1_l, A2_c and B2_c) shall be rounded and displayed to 4 decimal places.

3. REQUIREMENTS APPLICABLE TO THE REFERENCE LABORATORIES AND DETERMINATION OF THE ASSIGNED VALUES

The assigned values of each alignment tyre shall be determined by a network of reference laboratories. Every second year the network shall assess the stability and validity of the assigned values.

Each reference laboratory participating in the network shall comply with the specifications of Annex 6 of UNECE Regulation No 117 and its subsequent amendments and have a standard deviation (σ_m) as follows:

- (a) not greater than 0,05 kg/t for class C1 and C2 tyres; and
- (b) not greater than 0,05 kg/t for class C3 tyres.

The sets of alignment tyres, conforming to the specification of Section 2.2 shall be measured in accordance with Section 2.3 by each reference laboratory of the network.

The assigned value of each alignment tyre is the average of the measured values given by the reference laboratories of the network for this alignment tyre.

4. PROCEDURE FOR THE ALIGNMENT OF A REFERENCE LABORATORY TO THE ASSIGNED VALUES

Each reference laboratory (l) shall align itself to each new set of assigned values and always after any significant machine change or any drift in machine control tyre monitoring data.

The alignment shall use a linear regression technique on all individual data. The regression coefficients, $A1_l$ and $B1_l$, shall be calculated as follows:

$$RRC = A1_l * RRC_{m,l} + B1_l$$

where:

RRC is the assigned value of the rolling resistance coefficient;

$RRC_{m,l}$ is the individual measured value of the rolling resistance coefficient by the reference laboratory "l" (including temperature and drum diameter corrections).

5. REQUIREMENTS APPLICABLE TO CANDIDATE LABORATORIES

Candidate laboratories shall repeat the alignment procedure at least once every second year for every machine and always after any significant machine change or any drift in machine control tyre monitoring data.

A common set of five different tyres, conforming to the specification of Section 2.2 shall be measured in accordance with Section 2.3 firstly by the candidate laboratory and later on by one reference laboratory. More than five alignment tyres may be tested at the request of the candidate laboratory.

The alignment tyre set shall be provided by the candidate laboratory to the selected reference laboratory.

The candidate laboratory (c) shall comply with the specifications of Annex 6 of UNECE Regulation No 117 and its subsequent amendments and preferably have standard deviations (a_m) as follows:

- (a) not greater than 0,075 kg/t for C1 and C2 tyres; and
- (b) not greater than 0,06 kg/t for C3 tyres.

If the standard deviation (σ_m) of the candidate laboratory is higher than the above values with four measurements, the last three ones being used for the computations, then the number $n+1$ of measurement repetitions shall be increased as follows for the entire batch:

$$n+1 = 1 + (\sigma_m/\gamma)^2, \text{ rounded up to the nearest higher integer value}$$

where:

$\gamma = 0,043$ kg/t for Class C1 and C2 tyres

$\gamma = 0,035$ kg/t for Class C3 tyres

6. PROCEDURE FOR THE ALIGNMENT OF A CANDIDATE LABORATORY

One reference laboratory (i) of the network shall calculate the linear regression function on all individual data of the candidate laboratory (c). The regression coefficients, $A2_c$ and $B2_c$, shall be calculated as follows:

$$RRC_{m,l} = A2_c \times RRC_{m,c} + B2_c$$

where:

$RRC_{m,l}$ is the individual measured value of the rolling resistance coefficient by the reference laboratory (i) (including temperature and drum diameter corrections)

$RRC_{m,c}$ is the individual measured value of the rolling resistance coefficient by the candidate laboratory (c) (including temperature and drum diameter corrections)

If the coefficient of determination R^2 is lower than 0,97, the candidate laboratory shall not be aligned.

The aligned RRC of tyres tested by the candidate laboratory is calculated as follows:

$$RRC = (A1_l \times A2_c) \times RRC_{m,c} + (A1_l \times B2_c + B1_l)$$

COUNCIL GENERAL APPROACH

1. DEFINITIONS

For the purposes of the laboratory alignment procedure **for the measurement of rolling resistance**, the following definitions [] apply:

1. ‘reference laboratory’ means a laboratory that is part of the network of laboratories, the names of which have been published [] in the *Official Journal of the European Union* **for the purpose of the laboratory alignment procedure**, and **that** is able to achieve the accuracy of test results determined in Section 3 with its reference machine;
2. ‘candidate laboratory’ means a laboratory participating in the **laboratory** alignment procedure that is not a reference laboratory;
3. ‘alignment tyre’ means a tyre that is tested for the purpose of performing the **laboratory** alignment procedure;
4. ‘alignment tyres set’ means a set of five or more alignment tyres for the alignment of one single machine;
5. ‘assigned value’ means a theoretical value of the []**rolling []resistance []coefficient (RRC)** of one alignment tyre as measured by a theoretical laboratory which is representative of the network of reference laboratories that is used for the **laboratory** alignment procedure;
6. ‘machine’ means every tyre testing spindle in one specific measurement method. For example, two spindles acting on the same drum shall not be considered as one machine.

2. GENERAL PROVISIONS

2.1. Principle

The measured (m) rolling resistance coefficient in a reference laboratory (l), ($RRC_{m,l}$), shall be aligned to the assigned values of the network of reference laboratories.

The measured (m) rolling resistance coefficient obtained by a machine in a candidate laboratory (c), $RRC_{m,c}$, shall be aligned through one reference laboratory of the network of its choice.

2.2. Tyre selection requirements

A set of five or more alignment tyres shall be selected for the alignment procedure in compliance with the criteria below. One set shall be selected for C1 and C2 tyres together, and one set for C3 tyres.

- (a) The set of alignment tyres shall be selected so as to cover the range of different RRC s of C1 and C2 tyres together, or of C3 tyres. In any event, the difference between the highest RRC_m of the tyre set, and the lowest RRC_m of the tyre set shall be, before and after alignment, at least equal to:
 - (i) 3 kg/t for C1 and C2 tyres; and
 - (ii) 2 kg/t for C3 tyres.
- (b) The RRC_m in the candidate or reference laboratories ($RRC_{m,c}$ or $RRC_{m,l}$) based on declared RRC values of each alignment tyre of the set shall be distributed evenly.
- (c) Load index values shall adequately cover the range of the tyres to be tested, ensuring that the rolling resistance force values also cover the range of the tyres to be tested.

Each alignment tyre shall be checked prior to use and **shall be** replaced when:

- (i) **the alignment tyre** shows a condition which makes it unusable for further tests;
and/or
- (j) there are deviations of $RRC_{m,c}$ or $RRC_{m,l}$ greater than 1,5 per cent relative to earlier measurements after correction for any machine drift.

2.3. Measurement method

The reference laboratory shall measure each alignment tyre four times and retain the three last results for further analysis, in accordance with paragraph 4 of Annex 6 **to** UNECE Regulation No 117 and its subsequent amendments and **under** the conditions set out in paragraph 3 of Annex 6 **to** UNECE Regulation No 117 and its subsequent amendments.

The candidate laboratory shall measure each alignment tyre ($n + 1$) times, with n being specified in Section 5 **of this Annex** and retain the n last results for further analysis, in accordance with paragraph 4 of Annex 6 **to** UNECE Regulation No 117 and its subsequent amendments and applying the conditions set out in paragraph 3 of Annex 6 **to** UNECE Regulation No 117 and its subsequent amendments.

Each time an alignment tyre is measured, the tyre/wheel assembly shall be removed from the machine and the entire test procedure **referred to** in paragraph 4 of Annex 6 **to** UNECE Regulation No 117 and its subsequent amendments shall be followed again from the start.

The candidate or reference laboratory shall calculate:

- (a) the measured value of each alignment tyre for each measurement as specified in **Annex 6 to** UNECE Regulation No 117 and its subsequent amendments (i.e. corrected for a temperature of 25 °C and a drum diameter of 2 m);
- (b) the mean value of the three **last measured values of each alignment tyre** (in the case of reference laboratories) or **the mean value of the n last measured values of each alignment tyre** (in the case of candidate laboratories) **and**

(c) the standard deviation (σ_m) as follows:

$$\sigma_m = \sqrt{\frac{1}{p} \cdot \sum_{i=1}^p \sigma_{m,i}^2}$$

$$\sigma_{m,i} = \sqrt{\frac{1}{n-1} \cdot \sum_{j=2}^{n+1} \left(Cr_{i,j} - \frac{1}{n} \cdot \sum_{j=2}^{n+1} Cr_{i,j} \right)^2}$$

where:

i is the counter from 1 to p for the alignment tyres;

j is the counter from 2 to n+1 for the n last repetitions of each measurement of a given alignment tyre

n+1 is the number of repetitions of tyre measurements (n+1=4 for reference laboratories and n+1 ≥ 4 for candidate laboratories);

p is the number of alignment tyres (p ≥ 5).

2.4. Data formats to be used for the computations and results

- The measured RRC values corrected from drum diameter and temperature shall be rounded to 2 decimal places.
- Then the computations shall be made with all digits: there shall be no further rounding except on the final alignment equations.
- All standard deviation values shall be displayed to 3 decimal places.
- All RRC values will be displayed to 2 decimal places.
- All alignment coefficients (A1_l, B1_l, A2_c and B2_c) shall be rounded and displayed to 4 decimal places.

3. REQUIREMENTS APPLICABLE TO THE REFERENCE LABORATORIES AND DETERMINATION OF THE ASSIGNED VALUES

The assigned values of each alignment tyre shall be determined by a network of reference laboratories. Every second year the network shall assess the stability and validity of the assigned values.

Each reference laboratory participating in the network shall comply with the specifications of Annex 6 [] to UNECE Regulation No 117 and its subsequent amendments and have a standard deviation (σ_m) as follows:

- (a) not greater than 0,05 kg/t for [] C1 and C2 tyres; and
- (b) not greater than 0,05 kg/t for [] C3 tyres.

The [] alignment tyre[] sets, [] in accordance with the specification of Section 2.2, shall be measured in accordance with Section 2.3 by each reference laboratory of the network.

The assigned value of each alignment tyre is the average of the measured values given by the reference laboratories of the network for this alignment tyre.

4. PROCEDURE FOR THE ALIGNMENT OF A REFERENCE LABORATORY TO THE ASSIGNED VALUES

Each reference laboratory (l) shall align itself to each new set of assigned values and always after any significant machine change or any drift in machine control tyre monitoring data.

The alignment shall use a linear regression technique on all individual data. The regression coefficients, $A1_l$ and $B1_l$, shall be calculated as follows:

$$RRC = A1_l * RRC_{m,l} + B1_l$$

where:

RRC is the assigned value of the rolling resistance coefficient;

$RRC_{m,l}$ is the individual measured value of the rolling resistance coefficient by the reference laboratory “l” (including temperature and drum diameter corrections).

5. REQUIREMENTS APPLICABLE TO CANDIDATE LABORATORIES

Candidate laboratories shall repeat the alignment procedure at least once every second year for every machine and always after any significant machine change or any drift in machine control tyre monitoring data.

A common set of five different tyres, **in accordance with** the specification of Section 2.2 shall be measured in accordance with Section 2.3 firstly by the candidate laboratory and later on by one reference laboratory. More than five alignment tyres may be tested at the request of the candidate laboratory.

The alignment tyre set shall be provided by the candidate laboratory to the selected reference laboratory.

The candidate laboratory (c) shall comply with the specifications of Annex 6 **to** UNECE Regulation No 117 and its subsequent amendments and preferably have standard deviations (σ_m) as follows:

- (a) not greater than 0,075 kg/t for C1 and C2 tyres; and
- (b) not greater than 0,06 kg/t for C3 tyres.

If the standard deviation (σ_m) of the candidate laboratory is higher than [] **those** values with four measurements, the last three ones being used for the computations, then the number $n+1$ of measurement repetitions shall be increased as follows for the entire batch:

$$n+1 = 1 + (\sigma_m/\gamma)^2, \text{ rounded up to the nearest higher integer value}$$

where:

$$\gamma = 0,043 \text{ kg/t for [] C1 and C2 tyres}$$

$$\gamma = 0,035 \text{ kg/t for [] C3 tyres}$$

6. PROCEDURE FOR THE ALIGNMENT OF A CANDIDATE LABORATORY

One reference laboratory ([] **I**) of the network shall calculate the linear regression function on all individual data of the candidate laboratory (*c*). The regression coefficients, $A2_c$ and $B2_c$, shall be calculated as follows:

$$RRC_{m,l} = A2_c \times RRC_{m,c} + B2_c$$

where:

$RRC_{m,l}$ is the individual measured value of the rolling resistance coefficient by the reference laboratory ([] **I**) (including temperature and drum diameter corrections)

$RRC_{m,c}$ is the individual measured value of the rolling resistance coefficient by the candidate laboratory (*c*) (including temperature and drum diameter corrections)

If the coefficient of determination R^2 is lower than 0,97, the candidate laboratory shall not be aligned.

The aligned *RRC* of tyres tested by the candidate laboratory [] **shall be** calculated as follows:

$$RRC = (A1_l \times A2_c) \times RRC_{m,c} + (A1_l \times B2_c + B1_l)$$

ANNEX VII
Verification procedure

COMMISSION PROPOSAL

The conformity with this Regulation of the declared fuel efficiency, wet grip and external rolling noise classes, as well as the declared values, and any additional performance information on the label, shall be assessed for each tyre type or each grouping of tyres as determined by the supplier, according to one of the following procedures:

- (a) a single tyre or tyre set is tested first:
 - 1. if the measured values meet the declared classes or external rolling noise declared value within the tolerance defined in Table 1, the test is successfully passed;
 - 2. if the measured values do not meet the declared classes or external rolling noise declared value within the range defined in Table 1, three more tyres or tyre sets are tested. The average measurement value stemming from the three tyres or tyre sets tested is used to assess conformity with the declared information within the range defined in Table 1;
- (b) where the labelled classes or values are derived from type approval test results obtained in accordance with Regulation (EC) No 661/2009, or UNECE Regulation No 117 and its subsequent amendments, Member States may make use of measurement data obtained from conformity of production tests on tyres.

Assessment of the measurement data obtained from the conformity of production tests shall take into account the allowances defined in Table 1.

Table 1

Measured parameter	Verification tolerances
Rolling resistance coefficient (fuel efficiency)	The aligned measured value shall not be greater than the upper limit (the highest <i>RRC</i>) of the declared class by more than 0,3 kg/1 000kg.
External rolling noise	The measured value shall not be greater than the declared value of <i>N</i> by more than 1 dB(A).
Wet grip	The measured value <i>G(T)</i> shall not be lower than the lower limit (the lowest value of <i>G</i>) of the declared class.
Snow grip	The measured value shall not be lower than the minimum snow performance index.
Ice grip	The measured value shall not be lower than the minimum ice performance index.

COUNCIL GENERAL APPROACH

The conformity with this Regulation of the declared fuel efficiency, wet grip and external rolling noise classes, as well as the declared values, and any additional performance information on the label, shall be assessed for each tyre type or each grouping of tyres as determined by the supplier, according to one of the following procedures:

1. a single tyre or tyre set is tested first:
 - a. if the measured values meet the declared classes or external rolling noise declared value within the tolerance defined in Table 1, the test is successfully passed;
 - b. if the measured values do not meet the declared classes or external rolling noise declared value within the range defined in Table 1, three more tyres or tyre sets are tested. The average measurement value stemming from the three tyres or tyre sets tested is used to assess conformity with the declared information within the range defined in Table 1;
2. where the labelled classes or values are derived from type approval test results obtained in accordance with Regulation (EC) No 661/2009, or UNECE Regulation No 117 and its subsequent amendments, Member States may [] use [] measurement data obtained from the conformity of production tests on tyres, **carried out under the type-approval procedure established by Regulation (EU) 2018/858.**

Assessments of the measurement data obtained from the conformity of production tests shall take into account the [] **verification tolerances** defined in Table 1.

Table 1

Measured parameter	Verification tolerances
Rolling resistance coefficient (fuel efficiency)	The aligned measured value shall not be greater than the upper limit (the highest <i>RRC</i>) of the declared class by more than 0,3 kg/1 000kg.
External rolling noise	The measured value shall not be greater than the declared value of <i>N</i> by more than 1 dB(A).
Wet grip <u>performance</u>	The measured value <i>G(T)</i> shall not be lower than the lower limit (the lowest value of <i>G</i>) of the declared class.
Snow grip <u>performance</u>	The measured value shall not be lower than the minimum snow performance index.
Ice grip <u>performance</u>	The measured value shall not be lower than the minimum ice performance index.

COUNCIL GENERAL APPROACH

ANNEX VIIa

Information to be entered into the product database

1. Information to be entered in the public part of the database by the supplier:

- a) **the name or trademark, address, contact details and other legal identification of the supplier;**
- b) **the tyre type identifier and the date of production;**
- c) **the label in electronic format;**
- d) **the energy efficiency class(es) and other parameters of the label;**
- e) **the parameters of the product information sheet in electronic format.**

2. Information to be entered in the compliance part of the database by the supplier:

- a) **the tyre type identifier of all equivalent types already placed on the market;**
- b) **a general description of the tyre type, including its dimensions, load index and speed rating, sufficient for it to be unequivocally and easily identified;**
- c) **protocols of the testing, grading and measurement of tyre parameters in accordance with Annex I;**
- d) **specific precautions that shall be taken when the tyre type is assembled, installed, maintained or tested;**
- e) **the measured technical parameters of the tyre type;**
- f) **the calculations performed with the measured parameters;**
- g) **testing conditions if not described sufficiently in point (c).**

PRESIDENCY COMPROMISE PROPOSALS ON ANNEXES

ANNEX I

Testing, gradind and measurement of tyre parameters

Part A: Fuel efficiency classes and rolling resistance coefficient

The fuel efficiency class shall be determined and illustrated on the label on the basis of the rolling resistance coefficient (*RRC* in N/kN) according to the 'A' to 'G E' scale specified below and measured in accordance with Annex 6 to UNECE Regulation No 117 and its subsequent amendments and aligned according to the procedure laid down in Annex VI.

If a tyre type is approved for more than one tyre class (e.g. C1 and C2), the grading scale used to determine the fuel efficiency class of this tyre type shall be that which is applicable to the highest tyre class (e.g. C2, not C1).

C1 tyres		C2 tyres		C2 tyres	
RRC in kg/t	Energy efficiency class	RRC in kg/t	Energy efficiency class	RRC in kg/t	Energy efficiency class
$RRC \leq 6,5$	A	$RRC \leq 5,5$	A	$RRC \leq 4,0$	A
$6,6 \leq RRC \leq 7,7$	B	$5,6 \leq RRC \leq 6,7$	B	$4,1 \leq RRC \leq 5,0$	B
$7,8 \leq RRC \leq 9,0$	C	$6,8 \leq RRC \leq 8,0$	C	$5,1 \leq RRC \leq 6,0$	C
$9,1 \leq RRC \leq 10,5$	D	$8,1 \leq RRC \leq 9,0$	D	$6,1 \leq RRC \leq 7,0$	D
$RRC \geq 10,6$	E	$RRC \geq 9,1$	E	$RRC \geq 7,1$	E

Part B: Wet grip classes

1. The wet grip class shall be determined and illustrated on the label on the basis of the wet grip index (G) according to the 'A' to 'G E' scale specified in the table below, calculated in accordance with point 2 and measured in accordance with Annex 5 to UNECE Regulation 117.
2. Calculation of wet grip index (G)

$$G = G(T) - 0,03$$

where:

$G(T)$ = wet grip index of the candidate tyre as measured in one test cycle

C1 Tyres		C2 Tyres		C3 Tyres	
G	Wet grip class	G	Wet grip class	G	Wet grip class
$1,55 \leq G$	A	$1,40 \leq G$	A	$1,25 \leq G$	A
$1,40 \leq G \leq 1,54$	B	$1,25 \leq G \leq 1,39$	B	$1,10 \leq G \leq 1,24$	B
$1,25 \leq G \leq 1,39$	C	$1,10 \leq G \leq 1,24$	C	$0,95 \leq G \leq 1,09$	C
$1,10 \leq G \leq 1,24$	D	$0,95 \leq G \leq 1,09$	D	$0,80 \leq G \leq 0,94$	D
$G \leq 1,09$	E	$G \leq 0,94$	E	$G \leq 0,79$	E

Part C: External rolling noise classes and measured value

The external rolling noise measured value (N) shall be declared in decibels and calculated in accordance with Annex 3 to UNECE Regulation No 117.

The external rolling noise class shall be determined and illustrated on the label on the basis of the limit values (LV) set out in Part C of Annex II of Regulation (EC) No 661/2009 as follows:

N in dB

External rolling noise class

$N \leq LV - 3$

$LV - 3 < N \leq LV$

$N > LV$

Part D: Snow grip

The snow performance shall be tested in accordance with Annex 7 to UNECE Regulation No 117.

A tyre which satisfies the minimum snow index values set out in UNECE Regulation No 117 shall be classified as a snow tyre **for use in severe snow conditions** and the following icon shall be included on the label.

Part E: Ice grip

The ice grip performance shall be tested in accordance with reliable, accurate and reproducible methods, including, where appropriate, international standards, which take into account the generally recognised state-of-the-art.

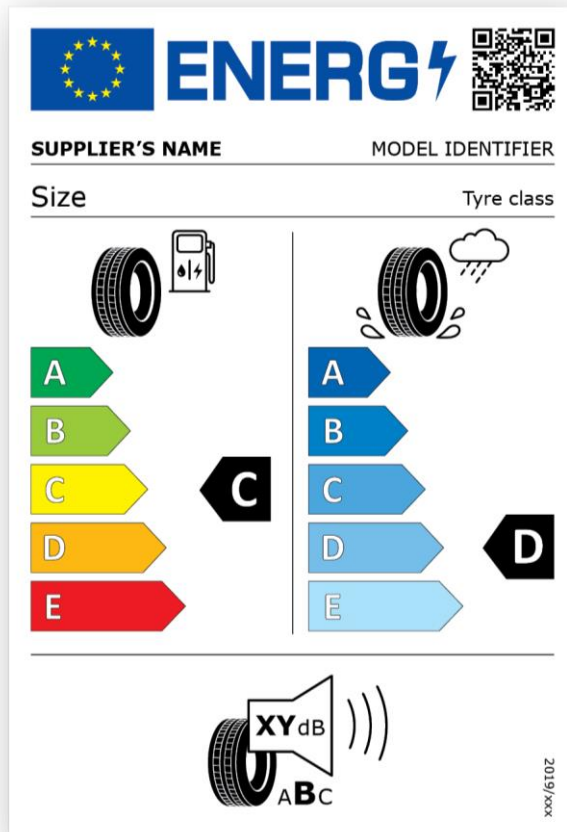

A tyre that satisfies the relevant minimum ice index values shall be classified as an ice tyre and the following pictogram shall be included on the label.

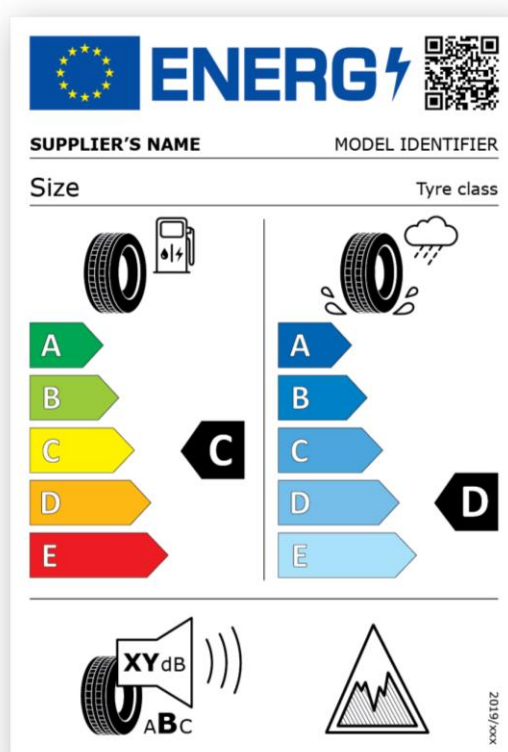

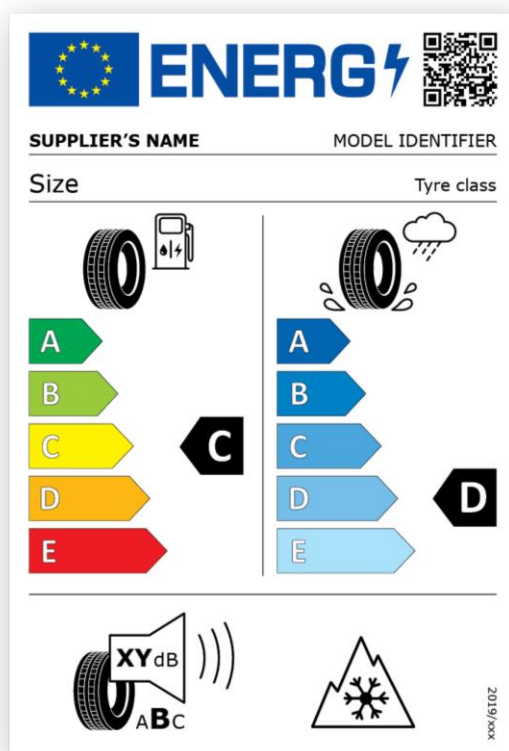

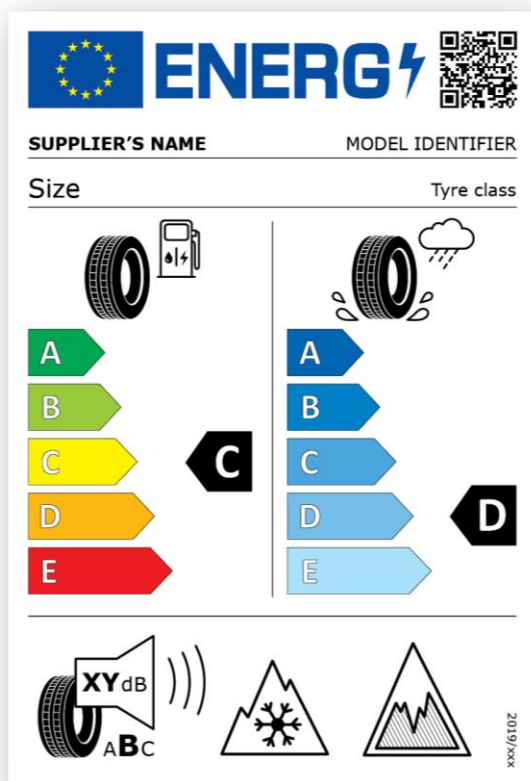

ANNEX II
Format of the label

7. LABELS

- 1.1 The following information shall be included in the labels in accordance with the illustrations below.

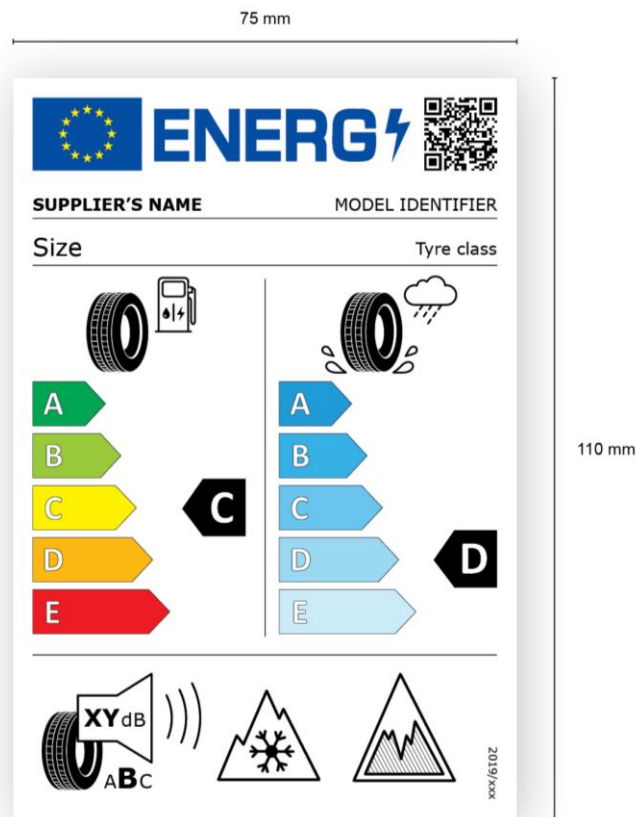

- I. QR code;
- II. Trade name or trademark of the supplier;
- III. **Tyre model type** identifier; ~~where ‘model identifier’ means the code, usually alphanumeric, which distinguishes a specific tyre type from other type with the same trade mark or supplier’s name;~~
- IV. Tyre size designation, load-capacity index and speed category symbol, as indicated in point 2.17 of UNECE Regulation No 30 for C1 tyres or in point 2.17 of UNECE Regulation No 54 for C2 and C3 tyres;
- V. Tyre class: i.e. C1, C2 or C3;
- VI. Fuel efficiency pictogram, scale and performance class;
- VII. Wet grip pictogram, scale and performance class;
- VIII. External rolling noise pictogram, value (expressed in dB(A) re 1 pW and rounded to the nearest integer) and performance class;
- IX. Snow tyre pictogram;
- X. Ice tyre pictogram;
- XI. The number of this Regulation that is ‘2020/XXX’ [OP - please insert the number of this Regulation in this point and in the right bottom corner of the label].

2. LABEL DESIGN⁵³

2.1 The design of the label shall be as in the figure below:⁵⁴

Whereby:

- (m) Label minimal size: 75 mm wide and 110 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above.
- (n) Background of the label: 100 % white.
- (o) Typefaces: Verdana and Calibri.
- (p) Dimensions and specifications of the elements constituting the label: as indicated in the label design.
- (q) Colour codes, using CMYK – cyan, magenta, yellow and black, shall fulfil all the following requirements:

⁵³ New label design, in line with the results of a recent Eurobarometer survey, which showed that 93% of European citizens recognise the EU energy label, and that almost 80% of people use it in their purchasing decisions. As discussed at the level of the Energy Working Party, given that the EU Energy Label has recently been updated, the tyre label could benefit from this 'brand' recognition by aligning its design with that of the energy label.

⁵⁴ Detailed size and legenda with pointers to be still added by the graphic designer.

- colours of the EU logo as follows:
 - background: 100,80,0,0;
 - stars: 0,0,100,0;
- colour of the energy logo: 100,80,0,0;
- QR code: 100 % black;
- Supplier's name: 100 % black and in Verdana Bold 7 pt;
- Model identifier: 100 % black and in Verdana Regular 7 pt;
- Tyre size designation, load-capacity index and speed category symbol: 100 % black and in Verdana Regular 10 pt;
- Tyre class: 100 % black and in Verdana Regular 7 pt, aligned to the right;
- Letters of the energy efficiency scale and of the wet grip scale: 100 % white and in Calibri Bold 19 pt; the letters shall be centred on an axis at 4,5 mm from the left side of the arrows;
 - CMYK colour codes of arrows for the A to E fuel efficiency scale as follows:
 - A-class: 100,0,100,0;
 - B-class: 45,0,100,0;
 - C-class: 0,0,100,0;
 - D-class: 0,30,100,0;
 - E-class: 0,100,100,0;
 - CMYK colour codes of arrows for the A to E wet grip scale as follows:
 - A : 100,60,0,0
 - B : 90,40,0,0
 - C : 65,20,0,0
 - D : 50,10,0,0
 - E : 30,0,0,0
- Internal dividers: weight of 0,5 pts, colour shall be 100 % black;

- Letter of the energy efficiency class: 100 % white and in Calibri Bold 33 pt. Energy efficiency and wet grip class arrows and the corresponding arrows in the A to E scale shall be positioned in such a way that their tips are aligned. The letter in the energy efficiency class and in the wet grip class arrow shall be positioned in the centre of the rectangular part of the arrow which shall be 100 % black;
- Fuel efficiency pictogram: width 16 mm, height 14 mm, weight 1 pts, colour: 100 % black
- Wet grip pictogram: width 20 mm, height 14 mm, weight 1 pts, colour: 100 % black
- External rolling noise pictogram: width 24 mm, height 18 mm, weight 1 pts, colour: 100 % black. Number of decibels in the loudspeaker in Verdana Bold 12 pt, the unit 'dB' in Regular 9 pt; the range of noise classes (A to C) centred under the pictogram, with the letter of the applicable noise class in Verdana Bold 16 pt and the other letters of the noise classes in Verdana Regular 10 pt;
- Snow pictogram: width 15 mm, height 11 mm, weight 1 pts, colour: 100 % black;
- Ice pictogram: width mm, height 12 mm, weight 1 pts, weight of oblique bars 0,5 pts, colour: 100 % black;
- The number of the regulation shall be 100 % black and in Verdana Regular 6 pt.

ANNEX III
Technical documentation

DELETED

ANNEX IV

Product information sheet

The information in the product information sheet of tyres shall be included in the product brochure or other literature provided with the [] tyre and shall include the following:

- a) The trade name or trade mark of the supplier, or of the manufacturer if it is not the same as the supplier;
- b) The tyre type identifier;
- c) **The tyre size designation, load-capacity index and speed category symbol, as indicated in point 2.17 of UNECE Regulation No 30 for C1 tyres or in point 2.17 of UNECE Regulation No 54 for C2 and C3 tyres;**
- d) The fuel efficiency class of the tyre in accordance with Annex I;
- e) The wet grip class of the tyre in accordance with Annex I;
- f) The external rolling noise class and value in decibels in accordance with Annex I;
- g) Whether the tyre is a tyre for use in severe snow conditions;
- h) Whether the tyre is an ice tyre;
- i) **The date of start of production of the tyre type (two digits for the week and two digits for the year);**
- j) **The date of end of production of the tyre type, once known (two digits for the week and two digits for the year).**

Information provided in technical promotional material

1. Information on tyres included in technical promotional material shall be provided in the order specified as follows:
 - (a) the fuel efficiency class (letter 'A' to 'F'E');
 - (b) the wet grip class (letter 'A' to 'EG');
 - (c) the external rolling noise class (**letter 'A' to 'C'**) and measured value in []dB(A);
 - (d) whether the tyre is a snow tyre;
 - (e) whether the tyre is an ice tyre.
2. The information provided in point 1 shall meet the following requirements:
 - (a) be easy to read;
 - (b) be easy to understand;
 - (c) if different grading is available for a given tyre type depending on dimension or other parameters, the range between the least and best performing tyre is stated.
3. Suppliers shall also make the following available on their websites:
 - (a) a link to the relevant Commission webpage dedicated to this Regulation;
 - (b) an explanation of the pictograms printed on the label;
 - (c) a statement highlighting the fact that actual fuel savings and road safety depend heavily on the behaviour of drivers, and in particular the following:
 - eco-driving can significantly reduce fuel consumption;
 - tyre pressure needs to be regularly checked to optimise wet grip and fuel efficiency performance;
 - stopping distances must always be strictly respected;
 - (d) **where relevant, a statement highlighting the fact that ice tyres are specifically designed for road surfaces covered with ice and compact snow, and should only be used in very severe climate conditions (e.g. cold temperatures) and that using ice tyres in less severe climate conditions (e.g. wet conditions or warmer temperatures) could result in sub-optimal performance, in particular for wet grip, handling and wear.**

COUNCIL GENERAL APPROACH

ANNEX VIIa

Information to be entered into the product database *by the supplier*

1. Information to be entered in the public part of the database ~~by the supplier~~:

- a) the name or trademark, address, contact details and other legal identification of the supplier;
- b) the tyre type identifier ~~and the date of production~~;
- c) the label in electronic format;
- d) the ~~energy efficiency~~ class(es) and other parameters of the label;
- e) the parameters of the product information sheet in electronic format.

2. Information to be entered in the compliance part of the database ~~by the supplier~~:

- a) the tyre type identifier of all equivalent tyre types already placed on the market;
- b) a general description of the tyre type, including its dimensions, load index and speed rating, sufficient for it to be unequivocally and easily identified;
- c) protocols of the testing, grading and measurement of tyre parameters in accordance with Annex I;
- d) specific precautions, **if any**, that shall be taken when the tyre type is assembled, installed, maintained or tested;
- e) the measured technical parameters of the tyre type;
- f) the calculations performed with the measured parameters;
- g) ~~testing conditions if not described sufficiently in point (c).~~

COUNCIL GENERAL APPROACH
