NOTE

From:	General Secretariat of the Council
To:	Permanent Representatives Committee
No. Cion doc.:	11503/23 + ADD 1
Subject:	Proposal for a Regulation of the Parliament and of the Council on the production and marketing of forest reproductive material, amending Regulations (EU) 2016/2031 and 2017/625 of the European Parliament and of the Council and repealing Council Directive 1999/105/EC (Regulation on forest reproductive material) *- Preparation for the trilogue*

I. INTRODUCTION

1. On 5 July 2023 the Commission adopted a legislative proposal on the production and marketing of forest reproductive material (FRM) in the EU[1].

2. The proposal is based on Article 43(2) of the Treaty on the Functioning of the European Union (TFEU) (ordinary legislative procedure).

[1] 11503/23+ADD1.

3. The objective is to replace Council Directive 1999/105/EC on the marketing of forest reproductive material with a modern Regulation that ensures traceability by allowing harvesting only from registered parent trees (i.e. basic material) and guarantees high seed quality through certification. This update responds to growing demand and climate challenges by harmonising rules across the EU, strengthening sustainability assessments and improving transparency with digital tools, supporting biodiversity, forest resilience and the EU's goal to plant 3 billion additional trees by 2030.

4. The Regulation has the following objectives:

   – to clarify and modernise the current rules,

   – to ensure a level playing field for operators,

   – to support innovation and the competitiveness of the FRM sector in the EU,

   – to contribute to addressing sustainability and climate-related challenges,

   – to adapt to new scientific and technical developments such as biomolecular techniques and digitalisation,

   – to ensure the conservation and sustainable use of forest genetic resources, and

   – to improve consistency with the legislation on official controls and plant health.

5. The European Economic and Social Committee adopted its opinion on 13 December 2023[2].

6. In the European Parliament, the Committee on Agriculture and Rural Development (AGRI) has lead responsibility for the negotiations and Mr Herbert Dorfmann (EPP, Italy) has been re-appointed as rapporteur. The Committee on the Environment, Climate and Food Safety (ENVI) is an associated committee with some shared and some exclusive competencies.

7. The European Parliament adopted its position at first reading on 24 April 2024.

---

[2] 5402/24.

8. On 13 June 2025, the Permanent Representatives Committee agreed on a mandate for the Presidency to enter into negotiations with the European Parliament[3].

9. On 1 September 2025, the AGRI committee of the European Parliament decided to open interinstitutional negotiations with the Council on the basis of the text agreed in plenary on 24 April 2024. The decision was confirmed during the September plenary session.

II. STATE OF PLAY

10. In light of the proposal's technical character, the co-legislators agreed to start interinstitutional negotiations at technical level on 3 September 2025 with a view to preparing for one trilogue only, to be held on 20 November 2025.

11. During the interinstitutional exchanges, a number of provisions, highlighted in green in the four-column table in Annex to this note, were discussed and provisionally agreed. These provisions are: initial Commission provisions which have not been modified either by the Council or by the Parliament; Council provisions which are similar to European Parliament provisions; linguistic modifications; and provisions considered by the Presidency to be part of its original mandate or to be reasonably acceptable for the Council in light of that mandate.

[3] 9694/1/25 REV 1.

12. The following issues, highlighted in yellow/red in the four-column table in Annex to this note, were identified as requiring further discussion at the trilogue on 20 November 2025:

– **Official controls on FRM (Articles 10(3), 25, 25a and 31)**

While understanding the Council's tailored approach on official controls on FRM[4], the Parliament favours the Commission proposed inclusion of the FRM Regulation under the scope of the Official Controls Regulation (OCR). However, the Parliament has indicated a readiness to consider Council's approach positively, provided that the list of OCR Articles to which cross reference is made, is extended to include among others Article 11 (Transparency of official controls), Article 13 (Written records of official controls), Article 35 (Second expert opinion), Articles 86-87 and 90-91 (Official certification), Articles 109 and 113 (Multiannual control plans), Articles 116-123 (Commission controls), Articles 126-129 (Conditions for the entry into the Union of animals and goods), Article 139 (Penalties), Article 144 (Exercise of the delegation), and Article 145 (Committee procedure).

– **Date of application of the FRM Regulation (Article 33)**

The Parliament does not agree with the postponement of the date of application of the Regulation from three to five years as suggested by the Council on the grounds that the three years proposed by the Commission would be sufficient for Member States.

[4] In its mandate the Council has not included the FRM Regulation in the scope of the Official Controls Regulation (OCR) and has instead inserted specific control provisions on FRM directly in the FRM Regulation together with cross references to a number of Articles of the OCR.

– **National contingency plans (Article 9)**

The Parliament advocates for mandatory contingency plans as proposed by the Commission. They consider the mandatory character essential to ensure effective preparedness for FRM shortages caused by events such as extreme weather conditions. Conversely, the Council considers that such a requirement may generate disproportionate administrative burden for Member States and prefers a voluntary approach. During the ITMs, the Parliament has remained firm on its request for mandatory plans while showing openness to consider ways to limit the administrative burden for Member States. Against this background, a possible compromise solution has been discussed whereby Member States would be required to draw up one or more contingency plans for the species listed in Annex I, and their hybrids, that they identify as relevant. While the contingency plan(s) shall include a few elements (which number would be limited to a minimum and thus substantially reduced as compared to the original Commission proposal), most of the content would be left to the discretion of the Member States.

– **Approval of basic material for the conservation of forest genetic resources (Article 6)**

The Parliament supports the derogations proposed by the Commission for the approval of basic material by professional operators, arguing that they are justified. The Council explained why it deleted this Article and highlighted concerns regarding the credibility of approval processes for basic material and the quality of FRM. During the ITMs a possible compromise solution has been discussed in which the Member States would be given the possibility to authorise professional operators to approve basic material for the purpose of conserving forest genetic resources under the official supervision of the competent authorities. The Member States would also keep the final decision on the inclusion of that basic material in the national register.

PUBLIC

– **Imports from third countries (Article 24)**

The Parliament considers that third countries must participate in the OECD Forest Seed and Plant Scheme[5] if they wish to export FRM to the EU, as proposed by the Commission. They view this as an incentive for establishing common trade standards and protecting the competitiveness of EU companies and thus oppose the Council proposal to allow imports from third countries with comparable certification systems, even if they are not part of that OECD scheme.

– **Intellectual Property (IP) rights (Article 12(3))**

The Parliament considers that the national lists of basic material to be established by Member States has to provide information on the IP rights existing on the FRM. They consider this information important to protect farmers/foresters against potential claims of violations of IP rights.

– **Absence of quality pests (new element)**

The Parliament suggests adding a new requirement for FRM concerning the absence of quality pests. This requirement is not included in the Council mandate nor in the Commission proposal. During the ITMs, the Commission has explained that such a requirement does not exist in the current plant health legislation[6] and could be added in Article 5, as a condition to be verified at the time of marketing of the FRM.

III. REQUESTS FOR FLEXIBILITY

13. The main open political issues referred to in point 12 were discussed at the meeting of the Counsellors/Attachés (Agri - Genetic Resources and Innovation in Agriculture) on 10 November 2025. Despite understanding the need for the Council to move towards the Parliament, delegations indicated only limited flexibilities at that stage on the main open political issues. The Presidency fears that these flexibilities may be insufficient to allow an agreement with the Parliament. In light of the clarifications provided by the Presidency and the Commission at the Counsellors/Attachés meeting, the Presidency would like to enquire about additional flexibilities it could obtain from delegations on these issues to facilitate an agreement:

– On the **official controls on FRM**, the Presidency considers that in order to safeguard the Council's tailored approach it will be necessary to accept part of the Parliament's request to extend the list of OCR articles in Article 31 and/or further elaborate on the official control provisions in the FRM legislation. In this context the Presidency has taken note of the Member States' request to avoid duplications and unnecessary administrative burdens.

– On **national contingency plans**, the Presidency expects that the Parliament will insist on the compulsory character of these plans and would thus like to understand from delegations whether the compromise solution discussed at the ITMs and the Counsellors/Attachés meeting on 10 November 2025 could be a basis for the way forward.

– On the date of **application of the Regulation**, the Presidency would like to call on delegations to consider the possibility of a shorter deadline than the five years currently in the Council mandate.

PUBLIC

– In addition to the key issues listed above, the Presidency assesses that it might be necessary to show targeted flexibilities to the request of the Parliament as regards the **approval of basic material for the conservation of forest genetic resources, absence of quality pests' criteria, imports from third countries and IP rights.** The Presidency will only take steps towards the Parliament on these points in the context of an overall agreement:

- **Approval of basic material for the conservation of forest genetic resources**: the Presidency proposes that the Council accept the principle of a derogation for this material but make clearer that Member States would not be obliged to make use of the derogation and would keep the final decision on the inclusion of that basic material in the national register;

- **Absence of quality pests criteria:** the Presidency proposes that the Council accepts the introduction of a marketing requirement on the absence of quality pests but that its fulfilment is limited to an obligation of visual inspection on a risk based approach;

- **Imports from third countries:** the Presidency proposes to take steps in the direction of the Parliament by deleting the reference to comparable certification system it introduced in its mandate on the condition that the participation in the OECD scheme is not a condition but an element to be considered by the Commission for the assessment of equivalence;

- **IP rights**: the Council could be ready to accept the principle of introducing information on IP rights in the national lists but limiting it to patents and with a wording that provides adequate safeguards against limitations to IP right. No obligations in this regard should be placed on rightsholder. Furthermore, liabilities and disproportionate burdens on competent authorities should be avoided.

In light of results already achieved during the technical interinstitutional meetings, the Presidency considers that obtaining the necessary flexibility on the above issues is essential for concluding the negotiations with the European Parliament.

PUBLIC

IV. CONCLUSION

14. In light of the above, the Permanent Representatives Committee is invited to:

- endorse the preliminary agreements reached between the negotiators as described in paragraph 11 of this note and presented in Annex (green highlighting) and
- discuss the open issues referred to in point 12 and agree to provide the Presidency with additional flexibility on these along the lines provided in point 13.
