NOTE

From:	General Secretariat of the Council
To:	Permanent Representatives Committee
Subject:	Proposal for a Directive of the European Parliament and of the Council amending Directive 2003/87/EC establishing a system for greenhouse gas emission allowance trading within the Union, Decision (EU) 2015/1814 concerning the establishment and operation of a market stability reserve for the Union greenhouse gas emission trading scheme and Regulation (EU) 2015/757 - Preparation for the trilogue - Four-column table

In view of preparing the trilogue scheduled for 16 December 2022, delegations will find attached the four column table.

Proposal for a DIRECTIVE OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL amending Directive 2003/87/EC establishing a system for greenhouse gas emission allowance trading within the Union, Decision (EU) 2015/1814 concerning the establishment and operation of a market stability reserve for the Union greenhouse gas emission trading scheme and Regulation (EU) 2015/757 (Text with EEA relevance)

	Commission Proposal	EP Mandate	Council Mandate	Comments/suggestions
		<u>(13a) The EU ETS should avoid, as much as possible, undue exemptions and distortive measures. In the long-term, all sectors should play a role in contributing to the achievement of climate neutrality within the Union by 2050 and all CO2 emissions should be covered by the appropriate Union policy instruments. The inclusion of municipal waste incineration installations in the EU ETS would contribute to the circular economy by encouraging recycling, reuse and repair of products, while also contributing to economy-wide decarbonisation. Since recycling and regeneration activities are already covered by the EU ETS, the inclusion of municipal waste incineration installations would reinforce incentives for sustainable management of waste in line with the waste hierarchy. It would complement other elements of Union waste legislation. Moreover, integrating waste incineration into the EU ETS would create a level playing field between the regions that have included municipal waste</u>		COUNCIL: Not discussed. See under corresponding article

	Commission Proposal	EP Mandate	Council Mandate	Comments/suggestions
		<u>incineration under the scope, reducing the risk of tax competition between regions. However, to avoid deviation of waste from municipal waste incineration installations towards landfills in the Union, which create methane emissions, and exports of waste to third countries, with a potentially hazardous impact on the environment, the inclusion of municipal waste incineration installations within the scope of Directive 2003/87/EC from 1 January 2026 should be preceded by an impact assessment to be conducted by 31 December 2024, which, where appropriate, should be accompanied by a legislative proposal to prevent such deviation of waste and such exports.</u>

	Commission Proposal	EP Mandate	Council Mandate	Comments/suggestions
	The coverage of a share of the emissions from both incoming and outgoing voyages between the Union and third countries ensures the effectiveness of the EU ETS, notably by increasing the environmental impact of the measure compared to a geographical scope limited to voyages within the EU, while limiting the risk of evasive port calls and the risk of delocalisation of transshipment activities outside the Union. To ensure a smooth inclusion of the sector in the EU ETS, the surrendering of allowances by shipping companies should be gradually increased with respect to verified emissions reported for the period 2023 to 2025. To protect the environmental integrity of the system, to the extent that fewer allowances are surrendered in respect of verified emissions for maritime transport during those years, once the difference between verified emissions and allowances surrendered has been established each year, a corresponding a number of allowances should be cancelled. As from 2026, shipping companies should surrender the	<u>from third countries, while providing for derogations in relation to</u>~~emissions from ships performing voyages arriving at a port under the jurisdiction of a Member State from a port outside the jurisdiction of a Member State,~~ half of the emissions from ships performing voyages ~~departing from~~<u>arriving at</u> a port under the jurisdiction of a Member State ~~and arriving at~~<u>from</u> a port outside the jurisdiction of a Member State, <u>half of the</u> emissions from ships performing voyages ~~arriving at a port under the jurisdiction of a Member State~~<u>departing</u> from a port under the jurisdiction of a Member State, ~~and emissions at berth in~~ <u>and arriving at</u> a port ~~under~~<u>outside</u> the jurisdiction of a Member State. ~~This approach has been noted as a practical way to solve the issue of Common but Differentiated Responsibilities and Capabilities, which has been a longstanding challenge in the UNFCCC context. Recital 17a				
27a		<u>(17a) The adverse impacts of climate change affect the respect of human rights, including the right to food, water, sanitation, health, decent housing and life. The Paris Agreement positioned as the third pillar of climate action the damage and loss that disproportionately affect people living in conditions of vulnerability, indigenous peoples, women, children, and people with disabilities. The low-income, lower-middle income and least developed countries are the most vulnerable to the impact of climate change. Although their contributions to the greenhouse gases in the atmosphere are very small or even negligible, they tend to be more heavily exposed to impacts of climate change, notably in view of the state of their infrastructure and their populations' living conditions.</u>	(17a) The extension of the scope of Directive 2003/87/EC to maritime transport will lead to changes in the cost of shipping. All parts of the Union will be affected by this as the goods transported to and from ports within the Union by maritime transport have their origin or destination in the different Member States, including in landlocked Member States. The allocation of allowances to be auctioned by the Member States should therefore, in principle, not change as a consequence of the inclusion of maritime activities and include all Member States. However, Member States will be affected to different extents. Notably Member States with a high reliance on shipping will be most exposed to the effect of the extension. Member States with a large maritime sector	COUNCIL: Maintain Council position. EP amendment not discussed. See under corresponding article

	Commission Proposal	EP Mandate	Council Mandate	Comments/suggestions
		<u><i>Those countries are now in a calamitous situation because of the combination of the global failure to curb greenhouse gas emissions, which increases their adaptation needs and costs ever higher, and the public finance crises caused by the COVID-19 pandemic and the associated 'debt pandemic'.</i></u>	compared to their relative size will be more affected by the extension of the EU ETS to maritime transport. It is therefore appropriate to provide additional assistance to those Member States in the form of additional allowances to support decarbonisation of maritime activities and for the administrative costs incurred. The assistance should be gradually introduced in parallel with the introduction of surrender obligations and thus with the increased effect on those Member States. Within the context of the review of Directive 2003/87/EC, the Commission should consider the relevance of this additional assistance in light, notably, of the development in the shipping companies under the responsibility of different Member States.

Recital 19a				
29a			(19a) CO₂ emissions represent the large majority of shipping emissions. The inclusion of additional greenhouse gas emissions from maritime transport from the start of the inclusion of shipping in the ETS is too early for reasons of administrative practicability, but emissions from greenhouse gases other than CO₂ will likely grow over time with the development of vessels powered by liquefied natural gases or other energy sources, so their inclusion in the future in the ETS would be beneficial for environmental integrity and incentivizing good practices. Therefore, emissions

36	(26) Achieving the Union's emissions reduction target for 2030 will require a reduction in the emissions of the sectors covered by the EU ETS of 61 % compared to 2005. The Union-wide quantity of allowances of the EU ETS needs to be reduced to create the necessary long-term carbon price signal and drive for this degree of decarbonisation. To this end, the linear reduction factor should be increased, also taking into account the inclusion of emissions from maritime transport. The latter should be derived from the emissions from maritime transport activities reported in accordance with Regulation (EU) 2015/757 for 2018 and 2019 in the Union, adjusted, from year 2021, by the linear reduction factor.	(26) Achieving the Union's emissions reduction target for 2030, <u>while at the same time pursuing the goal of the Paris Agreement to limit global warming to 1,5 °C</u>, will require a <u>significant</u> reduction in the emissions of the sectors covered by the EU ETS ~~of 61 % compared to 2005~~. The Union-wide quantity of allowances of the EU ETS needs to be reduced <u>progressively</u> to create the necessary long-term carbon price signal and drive for this degree of decarbonisation. To this end, the ~~linear~~<u>annual</u> reduction factor should be increased, also taking into account the inclusion of emissions from maritime transport. The latter should be derived from the emissions from maritime transport activities reported in accordance with Regulation (EU) 2015/757 for 2018 and 2019 in the Union, adjusted, from year 2021, by the linear reduction factor. 52b		<u>(42b) The European Securities and Markets Authority (ESMA) published its final report on emission allowances and associated derivatives on 28 March 2022. The Commission should, where appropriate and as soon as possible, present a legislative proposal to follow up on the recommendations in that report in order to improve the level of transparency, monitoring and reporting on the European emission allowance markets as well as related derivative markets. However, to continuously monitor market integrity and transparency, avoid misinformation and guide any potential rapid action, ESMA should on a regular basis publish a report on the integrity and transparency of those markets and, where relevant, issue further recommendations for targeted improvements. ESMA should in particular examine the functioning of the markets in light of any volatility and price evolution, the operation of the auctions and trading operations</u>	(42b) Dynamic allocation introduced in Directive 2018/410 and operationalized in Commission Implementing Regulation (EU) 2019/1842 improved the efficiency and incentives provided by free allocation, but increased the administrative work and made the historic date of issuance of free allocation of 28 February not operational. In order to better take into account dynamic allocation, it is relevant to make adjustments to the compliance cycle.	<i>(42b) The European Securities and Markets Authority (ESMA) published its final report on emission allowances and associated derivatives on 28 March 2022. The report is a comprehensive analysis of the integrity of the European carbon market and has provided expertise and recommendations in relation to upholding the proper functioning of the carbon market. In order to continuously monitor market integrity and transparency, the reporting by ESMA should be conducted on a regular basis. ESMA is already assessing market developments and, where necessary, providing recommendations in the area of its competence in their report on trends, risks and vulnerabilities in accordance with Article 32 (3) of the ESMA regulation. Analysis of the European carbon market, which includes the auctions of emission allowances, on-venue and over-the-counter trading in emission allowances and derivatives thereof, should be part</i>

	same ship information.	same ship information.	monitored, reported and verified under Regulation (EU) 2015/757 might also be used for the purpose of compliance with other Union law requiring the monitoring, reporting and verification of the same ship information.	
Recital 67a				
77a		<u>(67a) In addition to effective carbon pricing based on a well-functioning EU ETS, market transparency is of key importance for enabling swift and cost-efficient emission reductions in all sectors of the economy. To allow consumers and all actors along the supply chain to make informed choices concerning the emissions embedded in products, a European system for robust carbon footprint labelling of products should be developed.</u>	(67a) Since the objectives of this Directive to promote reductions of greenhouse gas emissions in a cost-effective and economically efficient way in a manner commensurate with this economy-wide net greenhouse gas emissions reduction target for 2030 through an extended and amended Union wide market based mechanism cannot be sufficiently achieved by the Member States but can rather, by reason of its scale and effects, be better achieved at Union level, the Union may adopt measures, in accordance with the principle of subsidiarity as set out in	COUNCIL: Maintain Council position. EP amendment not discussed

Annex, first paragraph, point (a), amending provision, numbered paragraph (2)				
457	2. When the total rated thermal input of an installation is calculated in order to decide upon its inclusion in the EU ETS, the rated thermal inputs of all technical units which are part of it, in which fuels are combusted within the installation, shall be added together. These units may include all types of boilers, burners, turbines, heaters, furnaces, incinerators, calciners, kilns, ovens, dryers, engines, fuel cells, chemical looping combustion units, flares, and thermal or catalytic post-combustion units. Units with a rated thermal input under 3 MW shall not be taken into account for the purposes of this calculation.; ”		23. When the total rated thermal input of an installation is calculated in order to decide upon its inclusion in the EU ETS, the rated thermal inputs of all technical units which are part of it, in which fuels are combusted within the installation, shall be added together. These units may include all types of boilers, burners, turbines, heaters, furnaces, incinerators, calciners, kilns, ovens, dryers, engines, fuel cells, chemical looping combustion units, flares, and thermal or catalytic post-combustion units. Units with a rated thermal input under 3 MW shall not be taken into account for the purposes of this calculation.; ”	Council text is a technical correction
