The allocation of fishing opportunities available to the Union in the Spitzbergen and Bear Island zone is without prejudice to the rights and obligations deriving from the 1920 Treaty of Paris.

PART B

MAXIMUM NUMBER OF FISHING AUTHORISATIONS FOR THIRD-COUNTRY VESSELS FISHING IN UNION WATERS

| Flag State | Fishery | Number of fishing authorisations | Maximum number of vessels present at any time |
|-----------------|---------------------------------|----------------------------------|---|
| Venezuela(1)(2) | Snappers (French Guiana waters) | 45 | 45 |

- To issue those fishing authorisations, proof must be produced that a valid contract exists between the fishing vessel owner applying for the fishing authorisation and a processing undertaking situated in the Department of French Guiana, and that it includes an obligation to land at least 75 % of all snapper catches from the fishing vessel concerned in that department so that they may be processed in that undertaking's premises. Such a contract must be endorsed by the French authorities, which shall ensure that it is consistent both with the actual capacity of the contracting processing undertaking and with the objectives for the development of the Guianese economy. A copy of the endorsed contract shall be appended to the fishing authorisation application. Where such an endorsement is refused, the French authorities shall notify that refusal, and state the reasons therefor, to the parties concerned and to the Commission.
- Fishing activities are authorised on an annual calendar basis. However, a fishing vessel can continue its fishing activities up to three months after expiry of its fishing authorisation, provided that the operator:
 - initiated the process to renew its fishing authorisation,
 - fulfilled all its contractual and information communication obligations.

This extension expires upon the entry into force of the Commission decision for a new fishing authorisation or notification of the refusal of the new fishing authorisation.

ANNEX VI

ICCAT CONVENTION AREA¹

1. Maximum number of Union baitboats and trolling boats authorised to fish actively for bluefin tuna (*Thunnus thynnus*) between 8 kg/75 cm and 30 kg/115 cm in the eastern Atlantic

| Spain | 60 |
|--------|-----|
| France | 55 |
| Union | 115 |

2. Maximum number of Union coastal artisanal fishing vessels authorised to fish actively for bluefin tuna between 8 kg/75 cm and 30 kg/115 cm in the Mediterranean

| Spain | 364 |
|--------|--------------------|
| France | 140 ⁽¹⁾ |
| Italy | 30 |
| Cyprus | 20(1) |
| Malta | 54(1) |
| Union | 684 |

This number may increase if a purse seiner is replaced by up to 10 longline vessels in accordance with Table A in point 4 of this Annex.

The numbers in points 1, 2 and 3 of this Annex may decrease in order to comply with the Union's international obligations.

3. Maximum number of Union fishing vessels authorised to fish actively for bluefin tuna between 8 kg/75 cm and 30 kg/115 cm in the Adriatic Sea for farming purposes

| Croatia | 18 |
|---------|----|
| Italy | 12 |
| Union | 28 |

4. Maximum number of fishing vessels of each Member State that may be authorised to fish for, retain on board, tranship, transport or land bluefin tuna in the eastern Atlantic and Mediterranean.

The numbers in this table will be established following the approval of the Union fishing, farming and capacity management plan by ICCAT, in accordance with the applicable ICCAT recommendations and Union rules.

- The numbers in this table may be further increased, provided that the Union's international obligations are complied with.
- One medium-size purse seiner has been replaced by no more than 10 longline vessels, or by one small purse seiner and three other artisanal vessels.
- One medium-size purse seiner may be replaced by no more than 10 longline vessels, or by one small purse seiner and no more than three longline vessels.
- One medium-size purse seiner may be replaced by no more than 10 longline vessels.
- The individual numbers of purse seiners in this table are the result of transfers between Member States and do not constitute historical rights for the future.
- Polyvalent vessels, using multi-gear equipment (longline, handline, trolling line).

⁽¹⁾ Expected in operational conditions.

Size of outer mesh, and inner mesh where a liner is used.

Inside measurement of stretched mesh based on the procedure in CCAMLR Conservation Measure 22-01 (2019).

Net diagram(s):

For each net used, or any change in net configuration, refer to the relevant net diagram in the CCAMLR fishing gear library if available (www.ccamlr.org/node/74407), or submit a detailed diagram and description to the next meeting of the Working Group on Ecosystem Monitoring and Management (WG-EMM). Net diagram(s) must include:

- 1. Length and width of each trawl panel (in sufficient detail to allow calculation of the angle of each panel with respect to water flow).
- 2. Mesh size (inside measurement of stretched mesh based on the procedure in CCAMLR Conservation Measure 22-01 (2019)), shape (e.g. diamond shape) and material (e.g. polypropylene).
- 3. Mesh construction (e.g. knotted, fused).
- 4. Details of streamers used inside the trawl (design, location on panels, indicate 'nil' if streamers are not in use); streamers prevent krill from fouling the mesh or escaping.

Marine mammal exclusion device

Device diagram(s):

For each type of device used, or any change in device configuration, refer to the relevant diagram in the CCAMLR fishing gear library if available (www.ccamlr.org/node/74407), or submit a detailed diagram and description to the next meeting of WG-EMM.

Individual haul when using a conventional trawl, or integrated over a six-hour period when using the continuous fishing system. Individual haul when using a conventional trawl, or integrated over a two-hour period when using the continuous fishing system. (2)

Observation steps and frequency

Holding tank volume

At the start of fishing Measure the width and length of the holding tank (if the tank is not

rectangular in shape, then additional measurements may be required;

precision ± 0.05 m)

Every month⁽¹⁾ Estimate the volume-to-mass conversion derived from the drained mass

of krill in a known volume (e.g. 10 litres) taken from the holding tank

Every haul Measure the depth of krill in the tank (if krill are held in the tank between

hauls, then measure the difference in depth; precision ± 0.1 m)

Estimate the green weight of krill caught (using equation)

Flow meter⁽¹⁾

Prior to fishing Ensure that the flow meter is measuring whole krill (i.e. prior to

processing)

More than once per

month⁽¹⁾

Estimate the volume-to-mass conversion (ρ) derived from the drained

mass of krill in a known volume (e.g. 10 litres) taken from the flow meter

Every haul⁽²⁾ Obtain a sample from the flow meter and:

- measure the volume (e.g. 10 litres) of krill and water combined,

- estimate the flow meter volume correction derived from the drained

volume of krill

Estimate the green weight of krill caught (using equation)

Flow meter⁽²⁾

Prior to fishing Ensure that both flow meters (one for the krill product and one for the

water added) are calibrated (i.e. show the same, correct reading)

Every week⁽¹⁾ Estimate the density (ρ) of the krill product (ground krill paste) by

measuring the mass of a known volume of krill product (e.g. 10 litres)

taken from the corresponding flow meter

Every haul⁽²⁾ Read both flow meters, and calculate the total volumes of the krill

product (ground krill paste) and that of the water added; density of the

water is assumed to be 1 kg/litre

Estimate the green weight of krill caught (using equation)

Flow scale

Prior to fishing Ensure that the flow scale is measuring whole krill (i.e. prior to

processing)

Every haul⁽²⁾ Obtain a sample from the flow scale and:

- measure the mass of krill and water combined,

- estimate the flow scale mass correction derived from the drained mass

of krill

Estimate the green weight of krill caught (using equation)

Plate tray

Prior to fishing Measure the mass of the tray (if trays vary in design, then measure the

mass of each type; precision ± 0.1 kg)

Every haul Measure the mass of krill and tray combined (precision ± 0.1 kg)

Count the number of trays used (if trays vary in design, then count the

number of trays of each type)

Estimate the green weight of krill caught (using equation)

Meal conversion

Every month⁽¹⁾ Estimate the meal to whole krill conversion by processing 1 000

to 5 000 kg (drained mass) of whole krill

Every haul Measure the mass of meal produced

Estimate the green weight of krill caught (using equation)

Cod-end volume

At the start of fishing Measure the width and height of the cod-end (precision ± 0.1 m)

Every month⁽¹⁾ Estimate the volume-to-mass conversion derived from the drained mass

of krill in a known volume (e.g. 10 litres) taken from the cod-end

Every haul Measure the length of cod-end containing krill (precision \pm 0,1 m)

Estimate the green weight of krill caught (using equation)

⁽¹⁾ A new period will commence when the vessel moves to a new subarea or division.

Individual haul when using a conventional trawl, or integrated over a six-hour period when using the continuous fishing system.

ANNEX VIII

IOTC AREA OF COMPETENCE

1. Maximum number of Union fishing vessels authorised to fish for tropical tunas in the IOTC Area of Competence

| Member State | Maximum number of vessels | Capacity (gross tonnage) |
|--------------|---------------------------|--------------------------|
| Spain | 22 | 61 364 |
| France | 27 | 45 383 |
| Portugal | 5 | 1 627 |
| Italy | 1 | 2 137 |
| Union | 55 | 110 511 |

2. Maximum number of Union fishing vessels authorised to fish for swordfish (*Xiphias gladius*) and albacore (*Thunnus alalunga*) in the IOTC Area of Competence

| Member State | Maximum number of vessels | Capacity (gross tonnage) |
|--------------|---------------------------|--------------------------|
| Spain | 27 | 11 590 |
| France | 41 ⁽¹⁾ | 7 882 |
| Portugal | 15 | 6 925 |
| Union | 83 | 26 397 |

This number does not include vessels registered in Mayotte; it may be increased in the future in accordance with Mayotte's fleet development plan.

- 3. The vessels referred to in point 1 shall also be authorised to fish for swordfish and albacore in the IOTC Area of Competence.
- 4. The vessels referred to in point 2 shall also be authorised to fish for tropical tunas in the IOTC Area of Competence.

ANNEX IX

WCPFC CONVENTION AREA

1. Maximum number of Union fishing vessels authorised to fish for swordfish (*Xiphias gladius*) in areas south of 20°S of the WCPFC Convention area

| Spain | To be established |
|-------|-------------------|
| Union | To be established |

2 Maximum number of Union purse seiners authorised to fish for tropical tuna in areas south of 20°S of the WCPFC Convention area

| Spain | To be established |

| Union | To be established |

ANNEX X

SIOFA AGREEMENT AREA

The annual bottom fishing effort of Union fishing vessels in the SIOFA Agreement Area shall not exceed the following limits:

| France | 237 fishing days |
|---------------------|------------------|
| Spain | 2 vessels |
| Other Member States | 0 |
