NOTE

From:	General Secretariat of the Council
To:	Permanent Representatives Committee
No. prev. doc.:	14271/23
No. Cion doc.:	14223/22 + ADD 1 - COM(2022) 541 final + Annex
Subject:	Proposal for a Directive of the European Parliament and of the Council concerning urban wastewater treatment (recast) - Preparation for the trilogue

I. INTRODUCTION

1. On 26 October 2022, the Commission transmitted to the European Parliament and the Council the proposal for a Directive of the European Parliament and of the Council concerning urban wastewater treatment (recast). The Commission presented its proposal and the accompanying impact assessment to the Working Party on the Environment (WPE) on 4 November 2022.
2. The Directive aims to protect the environment from the adverse effects of urban wastewater discharges and discharges from certain industrial sectors, and to ensure that domestic and industrial wastewater is effectively collected, treated and discharged. The recast aims to update the 30-year old Directive and address the remaining sources of pollution from urban sources, achieve better alignment with the objectives of the European Green Deal and improve the urban wastewater governance.

3. The examination of the proposal took place in the Working Party on the Environment (WPE). The Council agreed on a mandate for negotiations with European Parliament (the EP) on 16 October 2023.
4. In the EP, the file was referred to the Committee on the Environment, Public Health and Food Safety (ENVI), which appointed Nils Torvalds (Renew Europe, Finland) as rapporteur. The EP adopted its mandate on 5 October 2023. The WPE examined the EP amendments at its meeting on 14 November 2023.
5. The European Economic and Social Committee delivered its opinion on 22 February 2022. The Committee of the Regions delivered its opinion on 5 July 2023.

II. WORK IN THE COUNCIL AND WITH THE PARLIAMENT

6. So far one trilogue with the EP was held on 21 November 2023, on which COREPER was debriefed on 29 November 2023. Twelve technical meetings at tripartite level took place as well.
7. At the WPE on 16 January 2024 the Presidency requested delegations to indicate possible flexibilities, which it deemed necessary to reach an agreement with the EP. Based on the WPE discussion and bilateral talks with Member States, the Presidency prepared a revised mandate for the second trilogue, scheduled for 29 January 2024.
8. In view of the trilogue, the Presidency has prepared an updated five-column table, which can be found in the Annex to this note. Annex I, Section D and Annexes VII and VIII to the Regulation are included in a separate document. The rows in the fifth column marked in green indicate the text provisionally agreed at technical level. The text marked in yellow and red indicates the Presidency suggested positions on technical and political issues respectively, where the Presidency requests additional flexibility from delegations to enable reaching a deal with the EP. In addition, a number of other technical issues (remaining provisions and recitals, references needing adaptation) are also marked in yellow.

9. The Presidency invites delegations to review the attached documents and confirm their agreement on the revised mandate as proposed by the Presidency in this note as well as in the five-column document and the Annexes.

III. PRESIDENCY SUGGESTIONS IN VIEW OF THE TRILOGUE

10. In view of the trilogue, the Presidency proposes a revised mandate as set out below:

- a) *A “compromise package” related to the balance between deadlines, thresholds, derogations and values for each level of treatment (concerning articles 3, 5, 6, 7 and 8 as well as related parts of the Annexes)*

In order to reach an overall agreement with the EP a balance between thresholds, deadlines and deadline extensions concerning the main obligations of the urban wastewater treatment directive, acceptable to both co-legislators, has to be found. At technical level a number of possible compromise solutions have been identified. On the basis of discussions with Member States’ experts, the Presidency suggests to show some degree of flexibility on the thresholds and/or the deadlines, but maintain most of the derogations proposed in the General Approach, although simplified and included in the relevant provisions to which the derogations apply.

On collecting systems and secondary treatment the Presidency proposes to be slightly more ambitious on the thresholds (1000 p.e. instead of 1250 p.e.) and/or the deadlines for compliance (2033 instead of 2035) (rows 94, 131).

The Presidency suggests to simplify the provisions related to: (a) the deadline extensions for MS which acceded to the Union in 2004 and after 2006 (former Art 23(5)): an extension for all MS fulfilling specific conditions and an extension for specifically named Member States: Romania, Bulgaria and Croatia; (b) the deadline extension for secondary treatment to small agglomerations discharging into coastal waters and for discharges in less sensitive areas (aligned deadline of 2035 for both cases). Presidency will ensure that the extensions mentioned in point (a) are linked to the general deadline for compliance (12 and 8 years respectively if 2035, 14 and 10 if 2033). The Presidency also proposes to remove the deadline extension linked to preservation of cultural heritage. A possibility to update the National Implementation programme is proposed instead where the implementation is hindered due to cultural heritage preservation requirements (rows 15a, 96a, 130b, 131a, 141d, 132, 326a-326s).

On Integrated urban wastewater management plans (rows 109, 112, 563), the Presidency is proposing some flexibility on parameters such as the deadline for plans for agglomerations of 100.000 p.e., the deadline for the list of small agglomerations at risk as well as the one for their plans and/or the percentage of overflow on annual load among the conditions for a risk-based approach. This will ensure a better synergy with the requirements of the Water Framework Directive. The Presidency suggests to maintain the General Approach as regards the deadlines to meet the targets in Annex V, the frequency to review the lists and the plans and the “indicative non-binding objective” as regards the percentage of overflow/annual load,

On tertiary and quaternary treatment (rows 130, 140, 150, 162) the Presidency proposes to align the thresholds (10 000 p.e. and 150 000 p.e. for both) and argue for the alignment of timelines with the cycles foreseen in the Water Framework Directive while respecting the final deadline of the General Approach.

b) Extended Producer Responsibility (art. 9, row 168a)

Based on feedback received from Member States, the Presidency suggests flexibility to accept a limited reduction of the costs of quaternary treatment to be covered by the producers (minimum 90% compared to 80% proposed by the EP), while leaving Member States flexibility on how to allocate the remaining costs. Industry would still cover the full costs of gathering and verifying data on products placed on the market, as well as other costs required to exercise their extended producer responsibility.

c) Energy neutrality (art. 11, rows 206-211)

The Presidency suggests to show some flexibility on the deadlines for energy audits and stay as close as possible to the general approach as regards deadlines related to the renewable energy targets. The Presidency also proposes to maintain the General Approach on the progressive implementation schedule, and the possibility to produce the renewable energy on- or off-site and to purchase it partly from external sources. The Presidency seeks flexibility to increase the allowed rate of energy purchased externally, but limit this possibility to the last two stages of energy neutrality targets' implementation and subject to conditions as suggested by the EP. The Presidency also suggests to accept as a compromise a reference to non-fossil energy sources.

d) Urban Wastewater Surveillance (art. 17, rows 242-248)

The Presidency suggests to maintain the voluntary monitoring of public health parameters as in General Approach. As regards the monitoring of antimicrobial resistance, the Presidency proposes to accept slightly shorter deadlines for the Commission's implementing act (18 months from the directive's entry into force) and for the Member States' starting date for monitoring (2 years from the adoption of the implementing act).

e) *One Health Approach (art. 1, rows 56, 84a and other parts of the text)*

The EP considers the references to the “One Health Approach” and to “health” instead of “human health” throughout the text of high political importance. The EP also proposed a definition of “Polluter Pays Principle”. The Presidency proposes to show some flexibility on these issues in exchange for concessions on other topics.

f) *National water saving and reuse plans (art. 15, row 233m)*

The EP amendment introduces a provision for Member States to establish a national water saving and reuse plan which would include national objectives and implementing measures. As this is considered out of scope of this recast exercise by a large majority of Member States, the Presidency suggests not to accept it.

g) *Other issues*

Regarding the concentration of micropollutants representing a risk (Article 8.2, row 153) the Presidency proposes to keep the General Approach and not accept the EP proposal on the reverse burden of proof.

Member States are invited to pay particular attention to the proposed compromises concerning sanitation, its definition and related provisions (rows 23a, 85, 277a and 277b), implementing act to define criteria and selecting relevant parameters for monitoring (rows 300d and 289) and obligation for national database on biomedica (row 312a).

IV. CONCLUSION

11. The Permanent Representatives Committee is invited to examine the Presidency proposals for a Council position as set out in the fifth column of the attached text and to give the Presidency a mandate to continue negotiations with the European Parliament based on that text at the next trilogue scheduled on 29 January 2024.

Proposal for a DIRECTIVE OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL concerning urban wastewater treatment (recast) (Text with EEA relevance)

		<u><i>Directive. Pursuant to Article 191 TFEU, Union policy on the environment is to aim at a high level of protection taking into account the diversity of situations in the various regions of the Union. It is to be based on the precautionary principle and on the principles that preventive action should be taken, that environmental damage should as a priority be rectified at source and that the polluter should pay. The polluter pays principle refers to a principle according to which polluters should bear the costs of their pollution or environmental damage, including the cost of measures taken to prevent, control and remedy the pollution. The extended producer responsibility scheme provided for in this Directive is based upon the polluter pays</i></u>	platform. Pharmaceuticals and cosmetic residues currently represent the main sources of ~~micro-pollutants~~ micropollutants found in urban wastewater requiring an additional treatment (quaternary treatment). Therefore, extended producer responsibility should apply to those two product groups. According to the available data, the potential increase of costs of the products due to the application of the extended producer responsibility, or the potential reduction of the profit margins of the industries placing the products subject to extended producer responsibility, would be marginal at EU level and would not endanger the affordability and accessibility to these products on the EU market. In order to take into account the national		

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement	PCY comments/suggestions
		<u>principle and is aimed at the full implementation combined with a national contribution due to the need for further examination to ensure complete responsibility for all the pollution caused and full funding not to undermine the availability and accessibility of vital products.</u> Pharmaceuticals and cosmetic residues currently represent the main sources of micro-pollutants found in urban wastewater requiring an additional treatment (quaternary treatment). Therefore, extended producer responsibility should apply to those two product groups. <u>Due to national variations, Member States should be given flexibility enough to designate which products are classified as vital products, which could be, for example, medicines with a high impact on life quality, hygienic products</u>	specific conditions while preserving the European internal market and where and if necessary, preserving the accessibility and affordability of pharmaceuticals, Member States should have the possibility to impose additional requirements to the Extended Producer Responsibility schemes. This should be done notably through national recognition procedures of the producer responsibility organisations prior to their effective establishment as referred to in Article 10 paragraph 1.		

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement	PCY comments/suggestions
		<u>or sun protection products. The list of product groups should be adapted, if and as necessary, in the future in line with scientific and technological development, the evolution of the range of products placed on the market and new data from monitoring.</u>

Recital 16a					
26a		<u>(16a) Wastewater is one of the four main sources of methane emissions, next to agriculture, energy and waste. Therefore, the Commission should propose by 31 December 2025 and based on an impact assessment, a 2030 Union binding methane emission reduction target covering all relevant emitting sectors. Achievements in methane reductions are 82,5 times more effective, over a 20-year span, than CO2 reductions, and with 12 years compared to more than hundreds of years for CO2, methane is much faster to dissolve from the atmosphere and therefore highly relevant and advantageous to reduce, in accordance with the commitment made under the Global Methane</u>			

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement	PCY comments/suggestions
		<u><i>Pledge. Member States should ensure that the wastewater sector achieves the climate neutrality target by 2050 at the latest, as set out in the European Climate Law.</i></u>

Tables with notes in the Annexes

COMMISSION PROPOSAL

Annex 1

D. METHODS FOR MONITORING AND EVALUATION OF RESULTS

1. Member States shall ensure that a monitoring method is applied which fulfils the requirements set out in points 2 to 5.

Alternative methods to those referred to in points 2, 3 and 4 may be used provided that it can be demonstrated that equivalent results are obtained.

Member States shall provide the Commission with all relevant information concerning the applied monitoring method.

2. Flow-proportional or time-based 24-hour samples shall be collected at the same well-defined point in the outlet and, if necessary, in the inlet of the urban wastewater treatment plant .However, any time-based samples used to monitor micro-pollutants shall be 48-hour samples.

Good international laboratory practices aiming at minimizing the degradation of samples between collection and analysis shall be applied.

3. The minimum annual number of samples shall be determined according to the size of the treatment plant and be collected at regular intervals during the year:

— 1000 to 9 999 p.e.:	One sample per month
— 10 000 to 49 999 p. e.:	Two samples per month For micro-pollutants, one sample per month
— 50 000 to 99 999 p.e. :	One sample per week. For micro-pollutants, two samples per week
— 100 000 p.e. or over:	One sample per day For micro-pollutants, two samples per week

4. The treated wastewater shall be assumed to conform to the relevant parameters if, for each relevant parameter considered individually, samples of the water show that it complies with the relevant parametric value in the following way:
- (a) for the parameters specified in Table 1 , a maximum number of samples which are allowed to fail the requirements, expressed in concentrations and/or percentage reductions , is specified in Table 4;
 - (b) for the parameters of Table 1 expressed in concentrations, the failing samples taken under normal operating conditions must not deviate from the parametric values by more than 100 %, except for the parameter total suspended solids, for which deviations from the parametric values of up to 150 % may be accepted;
 - (c) for those parameters specified in Table 2 the annual mean of the samples for each parameter shall be conform to the relevant parametric values set out in that table. One or both parameters may be applied depending on the local situation. The values for concentration or for the minimum percentage of reduction shall apply;
 - (d) for the parameters specified in Table 3, each sample taken shall be conform to the parametric values set out in that table.

5. The samples shall be taken so that they reflect the pollution during dry weather conditions. Extreme values for the water quality in question shall not be taken into consideration when they are the result of unusual situations due to heavy rain.
6. Analyses concerning discharges from lagooning shall be carried out on filtered samples; however, the concentration of total suspended solids in unfiltered water samples of such discharges shall not exceed 150 mg/l.

Table 1: Requirements for discharges from urban waste water treatment plants subject to Article 6 of the Directive. The values for concentration or for the percentage of reduction shall apply.

Parameters	Concentration	Minimum percentage of reduction ¹	Reference method of measurement
Biochemical oxygen demand (BOD ₅ at 20 °C) without nitrification (see Note 1)	25 mg/l O ₂	70-90 40 under Article 4 (2)	Homogenized, unfiltered, undecanted sample. Determination of dissolved oxygen before and after five-day incubation at 20 °C ± 1 °C, in complete darkness. Addition of a nitrification inhibitor
Chemical oxygen demand (COD) ☒ (See Note 2) ☐	125 mg/l O ₂	75	Homogenized, unfiltered, undecanted sample Potassium dichromate
Total Organic Carbon (See Note 2)	37 mg/l	75	EN 1484
Total suspended solids	35 mg/l (see Note 3)	90 (see Note 3)	- Filtering of a representative sample through a 0,45 µm filter membrane. Drying at 105 °C and weighing - Centrifuging of a representative sample (for at least five mins with mean acceleration of 2800 to 3200 g), drying at 105 °C and weighing

¹ Reduction in relation to the load of the influent.

Note 1: The parameter can be replaced by another parameter: total organic carbon (TOC) or total oxygen demand (TOD) if a relationship can be established between BOD5 and the substitute parameter.

Note 2: Member States shall measure either the Chemical oxygen demand (COD) or the Total Organic Carbon.

Note 3: This requirement is optional.

Table 2:

Requirements for tertiary treatment of discharges from urban wastewater treatment plants referred to in Article 7(1) and (3) . One or both parameters may be applied depending on the local situation. The values for concentration or for the percentage of reduction shall apply.

Parameters	Concentration	Minimum percentage of reduction ² (See Note 1)	Reference method of measurement
Total phosphorus	0,5 mg/L	90	Molecular absorption spectrophotometry
Total nitrogen	6 mg/L	85	Molecular absorption spectrophotometry

Note 1: Natural nitrogen retention shall not be taken into account in the calculation of the minimum percentage reduction.

² Reduction in relation to the load of the influent.

Table 3: Requirements for quaternary treatment of discharges from urban wastewater treatment plants referred to in Article 8(1) and (3).

Indicators	Minimum percentage of removal
Substances that can pollute water even at low concentrations (see Note 1)	80 % (see Note 2)

Note 1: The concentration of the organic substances referred to in points (a) and (b) shall be measured.

(a) Category 1 (substances that can be very easily treated):

- (i) Amisulprid (CAS No 71675-85-9),
- (ii) Carbamazepine (CAS No 298-46-4),
- (iii) Citalopram (CAS No 59729-33-8),
- (iv) Clarithromycin (CAS No 81103-11-9),
- (v) Diclofenac (CAS No 15307-86-5),
- (vi) Hydrochlorothiazide (CAS No 58-93-5),
- (vii) Metoprolol (CAS No 37350-58-6),
- (viii) Venlafaxine (CAS No 93413-69-5);

(b) Category 2 (substances that can be easily disposed of):

- (i) Benzotriazole (CAS No 95-14-7),
- (ii) Candesartan (CAS No 139481-59-7),
- (iii) Irbesartan (CAS No 138402-11-6),
- (iv) mixture of 4-Methylbenzotriazole (CAS No 29878-31-7) and 6-methyl- benzotriazole (CAS No 136-85-6).

Note 2: The percentage of removal shall be calculated for at least six substances. The number of substances in category 1 shall be twice the number of substances in category 2. If less than six substances can be measured in sufficient concentration, the competent authority shall designate other substances to calculate the minimum percentage of removal when it is necessary. The average of the percentages of removal of all substances used in the calculation shall be used in order to assess whether the required 80 % minimum percentage of removal has been reached.

Annex 1

D. METHODS FOR MONITORING AND EVALUATION OF RESULTS

1. Member States shall ensure that a monitoring method is applied which fulfils the requirements set out in points 2 to 5.

Alternative methods to those referred to in points 2, 3 and 4 may be used provided that it can be demonstrated that equivalent results are obtained.

Member States shall provide the Commission with all relevant information concerning the applied monitoring method.

2. ~~Flow-proportional or~~ **Member States shall use** time-based 24-hour samples **which** shall be collected at the same well-defined point in the outlet and, if necessary, in the inlet of the urban wastewater treatment plant. However, any time-based samples used to monitor micro-pollutants shall be 48-hour samples.

Good international laboratory practices aiming at minimizing the degradation of samples between collection and analysis shall be applied.

3. The minimum annual number of samples shall be determined according to the size of the treatment plant and be collected at regular intervals during the year:

— ~~1000~~ 750 to 9 999 p.e.:	One sample per month
— 10 000 to 49 999 p.e.:	Two samples per month For micro-pollutants, one sample per ~~month~~ two months
— 50 000 to 99 999 p.e.:	One sample per week. For micro-pollutants, ~~two samples~~ one sample per ~~week~~ two months
— 100 000 p.e. or over:	One sample per ~~day~~ week For micro-pollutants, ~~two samples~~ one sample per ~~week~~ month

4. The treated wastewater shall be assumed to conform to the relevant parameters if, for each relevant parameter considered individually, samples of the water show that it complies with the relevant parametric value in the following way:
- (a) for the parameters specified in Table 1, a maximum number of samples which are allowed to fail the requirements, expressed in concentrations and/or percentage reductions, is specified in Table 4;
 - (b) for the parameters of Table 1 expressed in concentrations, the failing samples taken under normal operating conditions must not deviate from the parametric values by more than 100 %, except for the parameter total suspended solids, for which deviations from the parametric values of up to 150 % may be accepted;
 - (c) for those parameters specified in Table 2 the annual mean of the samples for each parameter shall be conform to the relevant parametric values set out in that table. One or both parameters may be applied depending on the local situation. The values for concentration or for the minimum percentage of reduction shall apply;
 - (d) for the parameters specified in Table 3, each sample taken shall be conform to the parametric values set out in that table.
5. The samples shall be taken so that they reflect the pollution during dry weather conditions. Extreme values for the water quality in question shall not be taken into consideration when they are the result of unusual situations due to heavy rain.
6. Analyses concerning discharges from lagooning shall be carried out on filtered samples; however, the concentration of total suspended solids in unfiltered water samples of such discharges shall not exceed 150 mg/l. *Equivalent digital on-line sensor measurement may be used as an alternative for this purpose.*

Table 1: Requirements for discharges from urban wastewater treatment plants subject to Article 6 of the Directive. The values for concentration or for the percentage of reduction shall apply.

1.

Parameters	Concentration	Minimum percentage of reduction ⁴⁹	Reference method of measurement
Biochemical oxygen demand (BOD5 at 20 °C) without nitrification (see Note 1)	25 mg/l O ₂	70-90 40 under Article 4(2)	Homogenized, unfiltered, undecanted sample. Determination of dissolved oxygen before and after five-day incubation at 20 °C ± 1 °C, in complete darkness. Addition of a nitrification inhibitor
Chemical oxygen demand (COD) (See Note 2)	125 mg/l O ₂	75	Homogenized, unfiltered, undecanted sample Potassium dichromate
Total Organic Carbon (See Note 2)	37 mg/l	75	EN 1484
Total suspended solids	35 mg/l (see Note 3))	90 (see Note 3))	– Filtering of a representative sample through a 0,45 µm filter membrane. Drying at 105 °C and weighing – Centrifuging of a representative sample (for at least five mins with mean acceleration of 2800 to 3200 g), drying at

49 Reduction in relation to the load of the influent.

			105 °C and weighing

Note 1: The parameter can be replaced by another parameter: total organic carbon (TOC) or total oxygen demand (TOD) if a relationship can be established between BOD5 and the substitute parameter.

Note 2: Member States shall measure either the Chemical oxygen demand (COD) or the Total Organic Carbon.

Note 3: This requirement is optional.

Table 2: 4-Requirements for tertiary treatment of discharges from urban wastewater treatment plants referred to in Article 7(1) and (3). *For wastewater treatment plants referred to in Article 7(1), both parameters shall apply. For wastewater treatment plants referred to in Article 7(3), one or both parameters may be applied depending on the local situation. The values for concentration or for the percentage of reduction shall apply. Equivalent digital on- line sensor measurement may be used as an alternative for this purpose. [Am. 229]*

Parameters	Concentration	Minimum percentage of reduction ⁷ (See Note 1)	Reference method of measurement
Total phosphorus	~~2~~ 0,5 0,2 mg/L	~~90-93~~	Molecular absorption spectrophotometry <i>or equivalent digital on-line sensor measurement.</i>
Total nitrogen	~~6 8~~ mg/L ^{7a}	~~85-80~~	Molecular absorption spectrophotometry <i>or equivalent digital on-line sensor measurement.</i>
⁷ Reduction in relation to the load of the influent.			
^{7a} <i>These values for concentration are annual means as referred to in Annex I, paragraph D.4(c). However, the requirements for nitrogen may be checked using daily averages where it is proved, in accordance with Annex I, paragraph D.1, that the same level of protection is obtained. In this case, the daily average must not exceed 20 mg/l of total nitrogen for all the samples when the temperature from the effluent in the biological reactor is superior or equal to 12 °C. The conditions concerning temperature could be replaced by a limitation on the time of operation to take account of regional climatic conditions.</i>			

Note 1: Natural nitrogen retention ~~shall not~~ *may* be taken into account in the calculation of the minimum percentage reduction, *if the water can be proven to take more than two years to reach the catchment area sensitive to nitrogen and would contribute to the eutrophication of that area, and shall be reported to the Commission. The concentrations of nitrogen in the areas referred to in point (b) of condition (1) are compliant with the reference conditions set under Annex V.1.2.1 of Directive 2000/60/EC to define the good ecological status of those areas.*

Table 3: Requirements for quaternary treatment of discharges from urban wastewater treatment plants referred to in Article 8(1) and (3).

Indicators	Minimum percentage of removal
Substances that can pollute water even at low concentrations (see Note 1)	80 % (see Note 2)

Note 1: The concentration of the organic substances referred to in points (a), (b) and (c) and (b) shall be measured.

(a) Category 1 (substances that can be very easily treated):

- (i) Amisulprid (CAS No 71675-85-9);
- (ii) Carbamazepine (CAS No 298-46-4);
- (iii) Citalopram (CAS No 59729-33-8);
- (iv) Clarithromycin (CAS No 81103-11-9);
- (v) Diclofenac (CAS No 15307-86-5);
- (vi) Hydrochlorothiazide (CAS No 58-93-5);
- (vii) Metoprolol (CAS No 37350-58-6);
- (viii) Venlafaxine (CAS No 93413-69-5).

(b) Category 2 (substances that can be easily disposed of):

- (i) Benzotriazole (CAS No 95-14-7);
- (ii) Candesartan (CAS No 139481-59-7);
- (iii) Irbesartan (CAS No 138402-11-6);
- (iv) mixture of 4-Methylbenzotriazole (CAS No 29878-31-7) and 6-methyl- benzotriazole (CAS No 136-85-6).

~~(ba) — Category 3 (substances of high risk):~~

~~(i) — Telmisartan (CAS No 144701-48-4);~~

~~(ii) — Bisphenol A (CAS No 80-05-7);~~

~~(iii) — Beta-estradiol (CAS No 50-28-2); Perfluorooctane sulfonic acid (PFOS) (CAS No 1763-23-1).~~

Note 2: The percentage of removal shall be calculated **on dry weather flow** for at least six substances **in categories 1 and 2 and all substances in category 3**. The number of substances in category 1 shall be twice the number of substances in category 2. If less than six substances can be measured in sufficient concentration, the competent authority shall designate other substances to calculate the minimum percentage of removal when it is necessary. The average of the percentages of removal of all substances used in the calculation shall be used in order to assess whether the required 80 % minimum percentage of removal has been reached.

Proposal for a Directive concerning urban wastewater treatment (recast)

ENVI/9/10493

COM(2022)541 final / 2022/0345(COD)

Tables with notes in the Annexes

Annex H

D. METHODS FOR MONITORING AND EVALUATION OF RESULTS

1. Member States shall ensure that a monitoring method is applied which fulfils the requirements set out in points 2 to 5. **All methods of analysis shall comply with minimum performance criteria as the ones defined in the Directive 2009/90/EC and other relevant rules.**

Alternative methods to those referred to in points 2, 3 and 4 may be used provided that it can be demonstrated that equivalent results are obtained.

Member States shall provide the Commission with all relevant information concerning the applied monitoring method.

2. Flow-proportional or time-based 24-hour samples shall be collected at the same well-defined point in the outlet and, if necessary, in the inlet of the urban wastewater treatment plant. However, any time-based samples used to monitor micropollutants ~~shall~~ **may** be 48-hour samples.

Good international laboratory practices aiming at minimizing the degradation of samples between collection and analysis shall be applied.

3. The minimum annual number of samples shall be determined according to the size of the treatment plant and be collected at regular intervals during the year:

1 250 to 9 999 p.e.:	One sample per month (see Note 1)
10 000 to 49 999 p. e.:	Two samples per month For micropollutants, one sample per month
50 000 to ~~99 999~~ 149 999 p.e.:	One sample per week. For micropollutants, two samples per week month
~~100 000~~ 150 000 p.e. or over above:	~~One sample per day~~ Two samples per week For micropollutants, two samples per week month

Note 1: For agglomerations concerned by seasonal activity, intervals of maximum two months without sampling are accepted provided that additional samples are taken during the months of seasonal activity. A total of 12 samples shall be taken throughout the year.

4. The treated **urban** wastewater shall be assumed to conform to the relevant parameters if, for each relevant parameter considered individually, samples of the water show that it complies with the relevant parametric value in the following way:
- (a) for the parameters specified in Table 1 **and Table 3**, a maximum number of samples which are allowed to fail the requirements, expressed in concentrations and/or percentage reductions, is specified in Table 4;
 - (b) for the parameters of Table 1 expressed in concentrations, the failing samples taken under normal operating conditions must not deviate from the parametric values by more than 100%, except for the parameter total suspended solids, for which deviations from the parametric values of up to 150 % may be accepted;

- (c) for those parameters specified in Table 2 the annual mean of the samples for each parameter shall be conform to the relevant parametric values set out in that table. One or both parameters may be applied depending on the local situation. The values for concentration or for the minimum percentage of reduction shall apply;
 - (d) for the parameters specified in Table 3, ~~each sample taken shall be conform to the parametric values set out in that table~~ **the frequency of sampling referred to in paragraph 3 of Part D of Annex I means that one sample is taken in the inlet and one sample is taken in the outlet of the urban wastewater treatment plant in order to verify compliance with the minimum percentage of removal of table 3 of Annex I. The average percentage of removal of all substances used in the calculation shall be used in order to assess whether the required 80% minimum percentage of removal has been reached.**
5. The samples shall be taken so that they reflect the pollution during dry weather **flow.** ~~conditions~~. Extreme values for the water quality in question shall not be taken into consideration when they are the result of unusual situations due to heavy rain.
 6. Analyses concerning discharges from lagooning shall be carried out on filtered samples; however, the concentration of total suspended solids in unfiltered water samples of such discharges shall not exceed 150 mg/l.

Table 1: Requirements for discharges from urban waste water treatment plants subject to Article 6 of the Directive. The values for concentration or for the percentage of reduction shall apply.			
Parameters	Concentration	Minimum percentage of reduction ³ (see Note 4)	Reference method of measurement
Biochemical oxygen demand (BOD ₅ at 20 °C) without nitrification (see Note 1)	25 mg/l O ₂	70-90 40 under Article 4(2) 6(3)	Homogenized, unfiltered, undecanted sample. Determination of dissolved oxygen before and after five-day incubation at 20 °C ± 1 °C, in complete darkness. Addition of a nitrification inhibitor
Chemical oxygen demand (COD) (See Note 2)	125 mg/l O ₂	75	Homogenized, unfiltered, undecanted sample Potassium dichromate
Total Organic Carbon (See Note 2)	37 mg/l	75	EN 1484
Total suspended solids	35 mg/l (see Note 3)	90 (see Note 3)	– Filtering of a representative sample through a 0,45 µm filter membrane. Drying at 105 °C and weighing – Centrifuging of a representative sample (for

³ — ~~Reduction in relation to the load of the influent.~~

			at least five mins with mean acceleration of 2800 to 3200 g), drying at 105 °C and weighing

Note 1: The parameter can be replaced by another parameter: total organic carbon (TOC) or total oxygen demand (TOD) if a relationship can be established between BOD₅ and the substitute parameter.

Note 2: Member States shall measure either the Chemical oxygen demand (COD) or the Total Organic Carbon.

Note 3: This requirement is optional.

Note 4: Reduction in relation to the load of the influent.

Note 1a : In exceptional situations due to specific local circumstances, **where it is demonstrated that part of Nitrogen originated from urban wastewater can be eliminated in the receiving waters**, natural nitrogen retention may be taken into account in Member States where natural nitrogen retention was taken into account in the calculation of the minimum percentage reduction of Nitrogen referred to under table 2 of Annex I of Council Directive 91/271/EEC **and where it is demonstrated that part of the nitrogen originated from urban wastewater can be eliminated in the receiving waters** until [OP please insert the date = last day of the fifteenth year after the entry into force of the Directive] for the calculation of the minimum percentage reduction of nitrogen referred to in table 2 of Part B of Annex I if all the following conditions are fulfilled:

- (1) the average hydraulic retention time of the discharged effluent is at least **2** years before it reaches the area sensitive to nitrogen designated under Article 7(2);
- (2) continuous monitoring and assessment programme of the total nitrogen parameter is ensured:
 - (a) in the outlets of all urban wastewater treatment plants and where relevant in the urban runoff from agglomerations of **10 000** p.e. and above located in the catchment area of the area designated sensitive to nitrogen under Article 7(2); and
 - (b) in the relevant inlets of the concerned area designated under Article 7(2); and
 - (c) at the representative sampling locations in the receiving waters and relevant water bodies in the catchment area of the concerned area designated under Article 7(2);
- (3) the minimum percentage reduction for nitrogen of Table 2 is met; this percentage shall be calculated on the basis of the data collected from continuous monitoring and assessment programme referred to in point (2);
- (4) it can be demonstrated that nitrogen releases from urban wastewater treatment plants in the catchment area are not harmful for the environment, including for biodiversity, and human health and do not modify the ecosystem;

- (5) the concentration of nutrients in the areas referred to in point (c) of condition (2) are compliant with the condition set under Annex V.1.2.1 of Directive 2000/60/EC to define good ecological status of those areas;
- (6) the use of natural nitrogen retention is reported to the Commission in accordance with Article 22(1)(a), as well to potentially affected neighboring Member States, together with all the elements necessary to verify that conditions (1), (2), (3), (4) and (5) above are fulfilled.

Note 2: This requirement shall apply on [OP please insert the date = date of adoption of this Directive] to existing urban wastewater treatment plants obliged to meet the deadlines established under Article 7(1) and to agglomerations under Article 7(3). Until these deadlines are met, the obligations of Article 32(3) shall apply to these urban wastewater treatment plants.

Note 3: Where the temperature in the effluent of the biological reactor is below 12 °C, ~~including situations where the effluent of the biological reactor is below 5 °C~~, the results of the samples taken may be excluded from the calculation of the annual mean for nitrogen as referred to in point (4)(c) of Part D of this Annex where all the following can be demonstrated:

- (1) no adverse effect to the environment is ensured;
- (2) excessive costs and/or excessive energy consumption would be required to reach the values for nitrogen in Table 2.

Where the temperature in the effluent of the biological reactor is below 5 °C the results of the samples taken may be excluded from the calculation of the annual mean for nitrogen as referred to in point (4)(c) of Part D of this Annex.

Table 3: Requirements for quaternary treatment of discharges from urban wastewater treatment plants referred to in Article 8 (1) and **or from urban wastewater treatment plants serving agglomerations referred to in Article 8(34).**

Indicators	Minimum percentage of removal in relation to the load of the influent
Substances that can pollute water even at low concentrations (see Note 1)	80 % (see Note 2)

Note 1: The concentration of the organic substances referred to in points (a) and (b) shall be measured.

(a) Category 1 (substances that can be very easily treated):

- (i) Amisulprid (CAS No 71675-85-9),
- (ii) Carbamazepine (CAS No 298-46-4),
- (iii) Citalopram (CAS No 59729-33-8),
- (iv) Clarithromycin (CAS No 81103-11-9),
- (v) Diclofenac (CAS No 15307-86-5),
- (vi) Hydrochlorothiazide (CAS No 58-93-5),
- (vii) Metoprolol (CAS No 37350-58-6),
- (viii) Venlafaxine (CAS No 93413-69-5);

(b) Category 2 (substances that can be easily disposed of):

(i) Benzotriazole (CAS No 95-14-7),

(ii) Candesartan (CAS No 139481-59-7),

(iii) Irbesartan (CAS No 138402-11-6),

(iv) mixture of 4-Methylbenzotriazole (CAS No 29878-31-7) and 5-methyl- benzotriazole (CAS No 136-85-6).

Note 2: The percentage of removal shall be calculated **on dry weather flow** for at least six substances. The number of substances in category 1 shall be twice the number of substances in category 2. If less than six substances can be measured in sufficient concentration, the competent authority shall designate other substances to calculate the minimum percentage of removal when it is necessary. The average of the **specific** percentages of removal of all **single** substances used in the calculation shall be used in order to assess whether the required 80 % minimum percentage of removal has been reached.

Table 4: Requirement for samples
