NOTE

From:	Presidency
To:	Delegations
No. prev. doc.:	6013/26
No. Cion doc.:	16405/23 + ADD 1
Subject:	Proposal for a Regulation of the European Parliament and of the Council on the protection of animals during transport and related operations, amending Council Regulation (EC) No 1255/97 and repealing Council Regulation (EC) No 1/2005 - *Consolidated Annexes*

With a view to the Working Party on Animal and Veterinary Questions (Animal Welfare & Husbandry) on 10-11 June 2026, delegations will find in annex the revised package of the consolidated Annexes of the above Regulation, including new Presidency suggestions for:

1) a full revision of:
   - Chapters II-IV and VI of Annex I;
   - Annex II.
2) partial changes to Chapters V and VII of Annex I and Annex Va.

All new changes compared to the previous Presidency text (document 6013/26 INIT) are highlighted in yellow.

All changes compared to the Commission proposal (including previous changes not presented for discussion at this stage) are marked as follows:

- new insertions: **bold and underline**
- new deletions: strikethrough

- insertions already discussed and considered as acceptable to the Working Party: **bold without underlining**
- deletions already discussed and considered as acceptable to the Working Party: […]
- editorial changes: marked as above and highlighted in grey.

PUBLIC

ANNEX I

TECHNICAL RULES FOR TERRESTRIAL ANIMALS

as referred to in Articles 2, 11, 12a, 13a, 17, ~~18,~~ 19, 19a, 20, 20a, 22, 25, 26, 27, 27a, 28, 29, ~~30,~~ 31a, 33, 36a, 40, 44, ~~and~~ 47, 58 and 59

PUBLIC

CHAPTER I

FITNESS FOR TRANSPORT

No new changes proposed at this stage.

1. Terrestrial animals shall not be considered fit for transport if:

(a) they are injured, [~~or~~] ill ~~[~~**or showing signs of severe ~~in~~ pain~~]~~**;

~~(b) they present physiological weaknesses or pathological processes;~~[1]

(c) they are unable to **stand on all their legs, maintain balance~~,~~ or** move independently **[**~~without pain or to walk unassisted~~**]**[2];

(ca) they are blind in both eyes.

(d) they are cachectic or severely dehydrated;

(e) they present a severe ~~open **unhealed**~~ **open** wound, **a hernia that restricts movement or is swollen, strangulated, ulcerated or infected** ~~**with complications**~~ or **a** prolapse;

---

[1] **Point 1(b) has been moved to point 1(l).**

[2] **Consequential change of the addition of 'pain' in point a.**

(f) they are pregnant females for whom 80 % or more of the expected gestation period has already passed, or females who have given birth in the **preceding** ~~previous~~ 7 days **preceding the journey, except in case of pregnant mares if the purpose of the journeys is to improve the health and welfare conditions of birth, provided that the mares are permanently accompanied by an attendant, dedicated to them during the transport;**

~~[(fa) they are lactating females and milking every 12 hours during transport is not possible;]~~[3]

(g) they are new-born mammals in which the navel has not completely healed **unless they are transported with their dam, or in case of unweaned farmed lagomorphs of at least 48 hours of age, transported in the nest;**

(h) they are calves ~~of less than 5 weeks of age and weigh less than 50 kg~~, piglets, lambs or kids of less than 3 weeks, unless they are transported less than 100 km;

(i) they are dogs and cats of less than 12 weeks of age **or in the case of dogs being transported within a Member State, 8 weeks of age;**

~~(j) they are rabbits of less than 48 hours of age;~~

(k) they are cervid animals in velvet period **whose antlers ~~are still innervated~~ have not yet ossified.**

(l) they present physiological or pathological conditions other than those mentioned in points (a) to (k) that are likely to cause pain, suffering, or a decline in health during transport;

2. ~~Except if accompanied by their dam, t~~The following **terrestrial** animals shall not be considered fit for long journeys:

(a) **animals of the domestic** equine **species** ~~animals~~**, if they are unbroken or** if they are younger than 4 months **except if accompanied by their dam~~, or if they are unbroken~~**;

---

[3] **This provision is covered by a new point 3.10 in Chapter III of Annex I.**

~~(b) piglets, if their body weight is less than 10 kgs.~~

(c) calves, if they are less than ~~5~~ [4] weeks of age except if accompanied by their dam;

~~[(d) end of career sows, end of career dairy cows and end of career laying and breeder hens, except if they are transported to the nearest slaughterhouse.]~~[4]

3. By way of derogation from points~~ 1 (a) and (b)~~, animals may be considered fit for transport **for short journeys or journeys to the nearest slaughterhouse adapted to the species and categories concerned** if they are:

(a) slightly injured or ill, and **their** transport would not cause additional suffering **or decline in health during transport. In such cases, animals shall be transported under conditions that take into account the injury or illness;**

(ba) blind but otherwise ~~healthy~~ fit for transport. In such cases, animals shall be transported under conditions that take into account their blindness;

~~(b) transported under veterinary supervision for or following veterinary treatment or diagnosis, and no unnecessary suffering or ill treatment is caused to the animals concerned;~~[5]

(c) animals that have ~~been submitted to~~ **undergone** veterinary surgical procedures ~~**outside**~~ **elsewhere than at veterinary practices or clinics**, provided that wounds are not **inflamed and there are no signs of** bleeding and measures are taken to minimise physical contact with the wound.

For the purposes of point**s** (a) **and (ba)**, in cases of doubt, veterinary advice shall be sought **and written documentation of such advice shall ~~be kept~~ accompany the animals and shall be made available to the competent authority upon request**.

4. […]

---

[4] ~~**A provision regarding end of career animals has been added to Article 28.**~~

[5] **Point 3(b) is deleted because the transport of animals directly to or from veterinary practices or clinics are excluded from the scope of the proposal (see Article 2(3)(b)).**

7. […].[6]

8. […].

9. […][7]

10. […]

PUBLIC

[6] **Paragraph 7 is ~~proposed to be~~ deleted. It is already covered by Article 20(2a) for assembly centres, control posts and handling facilities at port and airports, and partially by Article 21(3) for livestock vessels.**

[7] **Paragraphs 8 and 9 are proposed to be moved to point 3 of Chapter III of Annex I.**

CHAPTER II

MEANS OF TRANSPORT AND CONTAINERS

Revision of the whole chapter for WP of 10-11 June 2026

PUBLIC

1. Provisions for all means of transport and containers

1.1. Means of transport~~,~~ **and** containers, **including** ~~and~~ their fittings shall be designed, constructed~~,~~ **and** maintained ~~and operated~~ so as to:

(a) avoid injury and suffering and ~~to~~ ensure the safety of the animals;

(b) protect the animals from inclement weather, extreme temperatures and adverse changes in ~~climatic~~ **meteorological and sea** conditions; ~~**For this purpose,**~~ **The means of transport shall be appropriately equipped for this purpose,** ~~**at least**~~ **including with a roof or a protective covering. The roof or the covering may be temporarily opened or removed during loading and unloading;**

(c) be **easy to** clean~~ed~~ and disinfect~~ed,~~ **including in terms of the materials used;**

(d) prevent the animals **from** escaping or falling out **[…];**

(da) be able to withstand the **mechanical** stresses ~~of movements~~ **occurring during** ~~**the**~~ **transport and related operations**;

(e) ensure that air ~~quality, and~~ quantity **and circulation** appropriate to the species **and categories of animals being** transported can be maintained;

(f) […] allow **animals** ~~them~~ to be ~~inspected~~ **checked**, fed **and hydrated when required,** and cared for **during the journey**;

(g) provide a flooring surface that ~~is anti-slip~~ **prevents animals from slipping and is appropriate to the species and categories of animals being transported;**

(h) provide a flooring surface that minimises the leakage of urine or faeces […];

(i) **for means of transport**, provide ~~a~~ **fixed or portable** means of lighting sufficient for […] **checking** and **providing** care ~~of~~ **to** the animals during transport. ~~**In the case of short journeys, portable lighting may be used as the only means of lighting.**~~[1]

1.2. ~~Sufficient space shall be provided inside the animals' compartment and at each of its levels **and inside containers,** to ensure that there is effective ventilation **air circulation** above the animals **when they are in a sitting position, in case of poultry, in a crouched position, in case of farmed lagomorphs and in a standing position, in case of the terrestrial animals.**~~[2]

[…]

~~1.3.~~ […][3]

1.4. ~~P~~ **If they are part of the means of transport, p**artitions **and their fittings** shall be strong enough to withstand the weight of animals **and any impact from the actions of the animals such as pulling, kicking or ramming. The partitions shall not have any gaps in which the animals could become trapped or under which they could slide, and shall be high enough to prevent the animals from jumping over**. **Partitions and their f**ittings shall be designed for quick and easy operation.

1.4a. Where provision of water is required in accordance with Chapter V of this Annex~~, and taking into account the species, categories and size of the animals being transported and the duration of the journey or journeys~~, means of transport and containers shall be equipped with, or carry, watering devices.

---

1 **The requirement for fixed and portable lighting in means of transport for long journeys is included in Chapter VI of this Annex**

2 **Moved to point 3.7. of Chapter VII of this Annex.**

3 **Moved to point 5.8 of Chapter III of this Annex.** ~~**Deleted since Annex I terrestrial animals, which in Article 3 are defined as domestic animals of the equine, bovine, porcine, ovine, caprine species, kept cervids and camelids, dogs, cats, farmed lagomorphs and poultry.**~~

1.4b. **The watering devices shall be in good working order, ~~appropriately~~ designed to allow species- and category-specific drinking behaviour and positioned to allow easy access and drinking. The number of watering devices in each compartment shall be sufficient to minimize any aggressive or competitive behaviour between the animals[4].**

~~Animals of the equine species may be watered using~~ Where movable water devices such as buckets, bowls or other appropriate ~~movable~~ receptacles are used they shall be secured so as to to prevent them from tipping over. ~~Dogs and cats may be watered using water devices such as bowls or other appropriate movable receptacles.~~

~~1.5.~~ [….] [5]

2. Additional provisions for transport by road or rail [....][6]

2.1. ~~**Road v**~~ Vehicles in which animals are transported shall be clearly and visibly marked indicating the presence of live animals […].

2.2. Road vehicles shall carry suitable equipment for loading and unloading the animals **that meets the requirements set out in point 2 of Chapter III of this Annex, unless the animals are transported in containers ~~that are loaded and unloaded manually~~.**

~~2.3. […]~~[7]

~~2.4. […]~~[8]

---

[4] According to Chapter V of Annex I, water shall be provided ad libitum to unweaned animals. For weaned animals of the bovine, ovine, caprine and porcine species, water may be provided ad libitum, whereas for animals of the equine species, dogs and cats, water shall be provided at intervals of less than nine hours. Consequently, in certain cases, vehicles used for short journeys shall be equipped with, or carry, watering devices.

[5] Moved to point 1.7 of Chapter III of Annex I, since this concerns transport practices.

[6] The reference to equine, bovine, ovine, caprine and porcine animals is deleted as the provisions of this paragraph also apply to other species of terrestrial animals.

[7] This point is deleted since it is covered by Article 19(2a) "The driver shall (…) drive in a manner that minimises the risk of injury to the animals".

[8] This point is deleted since the Articles do not provide for the attendant to perform killing during transport. Furthermore, emergency killing is covered in the contingency plan (Articles 7, ~~and~~ 8 and 18(3) and Annex Va point 1(d)).

~~2.5. [...]~~[9]

~~**3. [...]**~~[10]

4. Additional provisions for ~~transport in~~ containers

4.1. Containers in which animals are transported shall be clearly and visibly marked, indicating the presence of live animals and with a sign indicating the top of the container**, unless the containers allow direct visual access to the animals and are loaded on a vehicle marked in accordance with point 2.1**.

~~4.2. [...]~~[11]

4.3. Containers **or stacks of containers** of more than 50 kg shall be equipped with a sufficient number of adequately designed, positioned and maintained securing points enabling them to be securely fastened to the means of transport where they are to be loaded.

4.4. Containers loaded with animals that are ~~placed one on top of the other~~ stacked shall have the necessary strength and stability so as to avoid deformation, collapse or displacement during normal transport conditions.[12]

---

9 **This point is deleted since temperature sensors are required only for long journeys in accordance with article 24a(2) and there is no requirement for humidity monitoring.**

10 *Entire point moved to new Article 19a (14743/24).*

11 **Moved to point 1.1a of Chapter III of Annex I, since this concerns transport practices.**

12 **Moved from point 1.6. The requirement for the availability of instructions is deleted, as this relates to transport practices ~~and, moreover, such instructions may not be available from the manufacturer~~.**

CHAPTER III

TRANSPORT PRACTICES

Revision of the whole chapter for WP of 10-11 June 2026

PUBLIC

1. General provisions

1.1. Due regard shall be paid to the needs of […] animals **not accustomed to handling, and arrangements shall be made ~~for them~~ to minimise their stress and fear during transport and related operations** ~~to become accustomed to the mode of transport prior to the proposed journey~~.

1.1a. ~~During transport and handling, containers shall always be kept upright and jolts or shaking shall be minimised. Containers shall be secured to ensure their stability and to prevent their displacement due to the movement of the means of transport.[1] Containers shall be positioned in a way that air circulation inside the container is not impeded.[2]~~

Arrangements shall be made, prior to the planned journey, to ensure that animals become accustomed to the mode of feeding and watering to be used during the journey or journeys.

1.1b. When provision of water and feed is required in accordance with Chapter V of this Annex, the water and feed provided to the animals shall be of good quality and presented to the animals in a way that minimises contamination.

1.1c. During transport, animals shall be protected from inclement weather, extreme temperatures and adverse changes in meteorological and sea conditions, and in the case of transport by sea, protected from sea water.

~~[1] Moved from point 4.2 of Chapter II of Annex I with the deletion of the word "severe".~~

~~[2] Moved from point 5.4 of this Chapter.~~

1.1d. Escaping or falling of animals from the means of transport or containers shall be prevented.

1.1e. Containers shall always be placed upright and joints or stacking shall be minimised. Containers shall be secured to the means of transport to ensure their stability and to prevent their displacement due to the movement of the means of transport.[3] Containers shall be positioned in a way that air circulation inside the container is not impeded.[4]

1.2. […][5] [6]

1.~~4~~ 3.[7] ~~When c~~ Containers loaded with animals ~~are placed one on top of the other~~ shall be stacked in accordance with written instructions on the maximum stacking height provided by the manufacturer or, where such instructions are not available, by the transporter and the necessary precautions shall be taken:

(a) to prevent, or in the case of poultry and farmed lagomorphs, [8] ~~,~~ [9] to limit urine and faeces falling on the animals placed underneath;

(b) to ensure stability of the containers;

(c) to ensure that air circulation is not impeded.

1.~~5~~ 4. Animals kept at handling facilities~~,~~ at ports or airports and transferred to or from an aircraft or a vessel, or kept at assembly centres or control posts and loaded or unloaded to or from a road vehicle, shall be protected from risks of injuries, excessive noise exposure, adverse weather conditions and extreme temperatures, taking account of their species and categories.

---

3 **Moved from point 4.2 of Chapter II of Annex I with the deletion of the word "severe".**

4 **Moved from point 5.4 of this Chapter.**

5 **This point is proposed to be deleted since it is covered by article 30(3) paragraph 3 in the case of transport by livestock vessel or aircraft.**

6 **Requirements for feeding and watering at handing facilities at ports and airports and at assembly centres are covered in Chapter V of Annex I.**

7 **This point was originally moved from point 2.6. It is suggested to be placed here in order to regroup those points which concern containers.**

8 *Consequential to new definition of terrestrial animals in Article 3(19).*

9 **~~Fur animals are not covered by the definition of terrestrial animals and are therefore outside the scope of this Annex.~~**

1.~~6~~ 5. Vehicles transferring animals to or from an aircraft shall be operated in such a way as to prevent the tipping over of containers and unnecessary stress to the animals. The time spent by the animals on such vehicles shall be limited to the time necessary for the transfer. The time spent by the animals on the ~~tarmac~~ airport premises shall be kept to a minimum.

1.~~7~~ 6. [8]Piglets of less than 10 kg, lambs or kids[10] of less than 20 kg, calves of less than six months of age and foals of less than four months of age shall be provided with bedding. The quality and quantity of the bedding shall be appropriate to the species, the number of animals being transported, the duration of the journey or journeys, and the weather conditions, so that the animals remain comfortable, clean and dry during the entire journey or journeys.[11]

1.~~8~~ 7. Goods which are being transported in the same means of transport as animals shall be positioned so that they do not interfere with the loading, transport and unloading of the animals, are not in direct contact with the animals and do not pose any risk to them.[12]

2. Loading and unloading

2.1. Facilities **and equipment** for loading and unloading […] shall be designed, constructed, maintained and operated **so as** to:

(a) prevent injury and suffering and minimise excitement and distress during animal movements as well as to ensure the safety of the animals;

(b) ensure that surfaces […] **prevent animals from slipping** and that lateral protections **of sufficient height according to the species and categories of animals being transported** are provided to prevent animals from escaping **and from injuring themselves**;

---

10 To ensure consistency with point 1(h) of Chapter I.

11 **Consequence of new definition of journey in Article 3(4) - there can be several journeys between place of departure and place of destination if an assembly centre is used.**

12 **Moved from point 2.4 of this Chapter since it is not relevant only to the loading and unloading of the animals.**

(c) ~~ensure that they are~~ **be easy to** […] clean and […] disinfect **including in terms of the materials used**.

2.1a. Ramps and loading platforms shall be made of materials that can support the weight of the animals.

2.2. **If l**oading **and unloading** ramps **are used, they** shall not be steeper than an angle of:

(a) 20 degrees **from the horizontal**, (**equivalent to a vertical increase of** 36,4 % **for every unit of** ~~to the~~ horizontal **length**) for **animals of the porcine, bovine and equine species** […];

(b) 26 degrees […] **34** minutes **from the horizontal**, (**equivalent to a vertical increase of** 50 % **for every unit of** ~~to the~~ horizontal **length**) for […] **animals of the ovine and caprine species**.

2.2a. In case of a height difference between the ramp and the vehicle or between the ramp and the floor, that height difference shall be appropriate to prevent injuries or falls and to allow the uninterrupted movement of animals.

2.2b. Ramps shall be equipped with ~~non-slippery~~ flooring **that prevents animals from slipping and with lateral protections of sufficient height, appropriate to the species and categories of animals being transported.** […]

2.3. Lifting platforms, […] upper floors **and moveable floors** shall […] **be equipped with** safety barriers to prevent animals **from** falling**, becoming trapped in any gaps** or escaping during loading and unloading operations. **Lifting platforms and moveable floors shall be operated in such a way as to prevent animals from being injured during loading and unloading.**

~~2.4. […]~~[13]

[13] **Moved to point 1.7.**

2.5. Appropriate lighting shall be provided during loading and unloading to prevent animals balking and to allow […] **the detection of** possible animal welfare problems such as lameness, injuries, animals slipping or falling or defective pieces of equipment **and the assessment of the animals' fitness for transport and of the indicators referred to in Article 26(1)**.

~~2.6.~~[14][…]

3. Handling

3.1. It shall be prohibited to:

(a) strike or kick the animals;

(b) apply pressure to any part of the body **of the animals** in such a way as to cause them unnecessary **pain or** suffering;

(c) suspend the animals […] by mechanical means;

(d) lift**, pull** or drag the animals **mechanically or manually** by legs (except for poultry […] **if handled in accordance with the provisions of point 3.7)**, head, ears, horns, tail**,** ~~or~~ fleece**, wings or feathers**;

(e) use prods or other implements with **sharp or** pointed ends **capable of causing injury to the animals**;

(f) **force animals to move forward where their movement is obstructed or** obstruct […] animals **that are** […] being driven or led […]**;**

(g) cause unnecessary pain or suffering to the animals in any other way.

[14] *Moved to point 1.**3.***

3.2. The use of instruments which administer electric shocks **to an animal** shall be prohibited**,** […] **except when the following conditions are met**:

(a) […] **the animal is an animal of the bovine species of more than 6 months of age, or an animal of the porcine species of** over 80 kg […]**;**

(b) […] **the** animal refuses to move **or get up** without any visible reasons**;**

(c) the animal has sufficient space to move forward; and

(d) such instrument is used only as a last resort.

Shocks shall not be […] **administered** more than twice ~~,~~ **to the same animal**. **Each shock** shall last no longer than one second and shall only be […] **administered** to the muscles of the hindquarters. **Animals shall be given sufficient time to move or get up before any second shock is administered.**

The use of instruments that administer electric shocks to animals referred to in point 1.3 of Chapter I of this Annex shall be prohibited.

3.3. Assembly centres, ~~and~~ **control posts~~,~~ and handling facilities at ports and airports**[15] shall […] **have** equipment for tethering animals when necessary. Animals not used to being tied shall remain untied.

3.4. Animals shall not be tied by the horns, the antlers, the nose rings **and shall not have their** legs tied together.

Calves […] **shall not be muzzled.**

Dogs shall not be muzzled **unless the use of a muzzle is required for medical reasons, animal or human safety reasons, in which case the duration shall be limited to the minimum period necessary and the dog shall be supervised**. **Where a muzzle is used, it shall allow the dog to pant and to drink.**

---

15 *Consequential change of introduction of new provisions on these facilities in Chapter V (14743/24).*

Animals of the equine **species** […] older than eight months **of age**, **except unbroken animals of the equine species,** shall wear halters during transport. […]

3.5 When animals need to be tied, the ropes, tethers or other means used shall be:

(a) strong enough not to break during normal transport conditions;

(b) such as to allow the animals, if necessary, to lie down and to eat and drink;

(c) designed in such a way as to eliminate any danger of strangulation or injury, and to allow animals to be quickly released;

(ca) long enough to allow movement of the head and a normal standing position;

(d) **in case of animals of the equine species,** long enough and […] allow **the** animals to lower their head below the height of their withers**, without getting their head or legs caught**.

~~3.6. […]~~

3.7. **When placed in containers manually, poultry, other than day-old chicks, shall be caught and carried upright by holding their wings against their body.~~:~~**

However, poultry weighing less or equal to [5] kg may be handled in inverted position if:

(a) they are caught and carried by two legs;

(b) when lifting or lowering a bird its breast is supported by the operator's leg or a breast slide in the cage;

(c) during carrying, the birds stay in contact with the operator's body to minimise wing flapping;

(d) the duration of inversion is minimised;

(e) the distance between the birds being caught and the containers is kept to a minimum;

(f) a maximum of 3 birds are held per hand.

PUBLIC

~~**i) caught and carried upright by holding their wings against their body; or**~~

~~**ii)** **[…]** caught […] and carried by two legs**, with a maximum of 3 birds per hand.** […] **Breast** slides in cages or **the** operator's leg **should be used** as support for **the** bird's breast **when lifting or lowering the bird.** […] **The persons involved shall make arrangements to reduce the duration of handling poultry inverted.**~~

~~**Poultry weighing more than [5] kg shall only be caught and carried in accordance with point i.**~~

3.8. **When handled, weaned farmed lagomorphs shall be caught and lifted by the skin of the neck. Their body shall be ~~immediately~~ supported with the other hand when lifted.**

3.9. **Sedatives and tranquilisers shall not be used on animals to be transported unless it is necessary to ensure the welfare of the animals ~~and~~ or the safety of humans and shall only be used under the supervision of a veterinarian. ~~W~~ The veterinarian shall provide written documentation of the use of such substances, which shall accompany the animals and shall be made available to the competent authority upon request**.

3.10. **Lactating females of bovine, ovine and caprine species not accompanied by their offspring shall be milked shortly before loading and at intervals of not more than 12 hours. If milking is not possible, lactating females shall not be separated for more than 12 hours from their offspring.**

4. **Separation**

4.1. The following **animals** shall be handled **separately** and transported […] **in different animal compartments**~~:~~

(a) animals of different species;

(b) animals of significantly different sizes or ages;

PUBLIC

(c) adult breeding boars~~, or~~ stallions**, bulls and rams**;

(d) sexually mature males from females ~~**in oestrus**~~;

(e) animals with horns **of a size or shape that may cause injury** from animals without horns;

(f) animals ~~hostile to~~ **that are aggressive or show aggressive behaviour towards** each other;

(g) tied animals from untied animals.

4.2. Points 4.1 (a), (b), (c)**,** ~~**(d)**~~ and (e)~~.~~ shall not apply where the animals have been raised in compatible groups, are accustomed to each other, where separation will cause distress or where females are accompanied by […] ~~-~~**their offspring**.

5. ~~During transport~~ Other provisions

~~5.1. […].~~[16]

5.2. **Animals of the** equine **species** […] shall not be transported in multi-deck vehicles except if animals are loaded on the lowest deck with no animals on **the** higher deck.

5.2a. Animals of the equine species other than unbroken horses and mares with their foals shall be transported in individual stalls unless they are accustomed to each other and are not likely to injure each other due to aggressive behaviour.

5.3. Unbroken **animals of the** equine **species** […] shall not be transported in groups of more than 4 individuals **per compartment**.

~~**5.3a. Points 3.4 and 3.5 shall apply during transport.**~~[17]

---

[16] Covered by Article 31a

[17] **Deleted as a consequence to the change of the title of part 5 (the whole Chapter applies during transport).**

PUBLIC

5.4. Sufficient **air circulation** ~~ventilation~~ shall be provided to ensure **air quality and quantity appropriate to the species and categories of animals being transported** […] taking into account in particular the number […] of the animals […] and the expected weather conditions during the journey. […] [18]

~~5.5. […]~~[19]

5.6. In the case of transport of weaned domestic animals of the equine species or dogs and cats, the vehicle shall carry a sufficient quantity of feed to ensure compliance with the provisions referred to in points 1.1.(a) and 3.1. of Chapter V.[20]

~~**5.7. The water and feed provided to the animals shall be of good quality and presented to the animals in a way that minimizes contamination. Due regard shall be paid to the need of animals to become accustomed to the mode of feeding and watering.**~~

5.8. The following documents shall accompany animals other than terrestrial or aquatic animals and shall be made immediately available to the competent authority on its request:

(a) a notice indicating that the animals are timid or dangerous, where applicable;

(b) written instructions on feeding, watering and any special care required.[21]

~~**6. Minimum vertical ceiling height**~~[22]

~~6.1. For cattle and unweaned calves, the minimum vertical height during transport shall correspond to the following formula:~~

~~*H = W x 1.17 + 20*~~

---

18 Moved to point 1.1~~a~~**e**.

19 This point is proposed to be deleted since it is covered by chapter V of Annex I.

20 Weaned domestic animals of the equine species and dogs and cats are the only species requiring feeding during short journeys, therefore they are added in this Chapter III. Other species are covered by point 3.1 of Chapter VI of Annex I.

21 **Moved from point 1.3. of Chapter II with "wild animals" replaced by "animals other than terrestrial or aquatic animals".**

22 **It is suggested to move point 6 to Chapter VII of this Annex (as new point 3).**

whereby H = minimum height and W = wither height of the tallest animal in the compartment.

6.1. The minimum ceiling height of compartments in case of [illegible] animals of the bovine species shall be:

(a) for short journeys, at least [20] cm above the withers of the [illegible] animals;

(b) for long journeys, determined in accordance with the following formula:

H = W (cm) x 1.17 + [10] cm

where H = minimum ceiling height in cm, and W = wither height of the tallest animal in the compartment in cm.

6.1a The minimum ceiling height of compartments in case of any journey of animals of the porcine species shall be at least [15] cm above the highest point of the tallest animal in a standing position.

6.2. For sheep the space above the highest point of the tallest animal **The minimum ceiling height of compartments in case of any journey of animals of the ovine and caprine species** shall be at least 15 cm **above the highest point of the tallest animal in a standing position** in vehicles with mechanical ventilation and 30 cm in naturally ventilated vehicles.

6.3. For animals of the equine species the minimum internal height of a compartment **The minimum ceiling height of compartments in case of any journey of animals of the equine species** shall be at least 75 cm from **above** the withers of the tallest animal.

6.4. For **poultry,** domestic birds the height of the **The minimum ceiling height of** containers **in case of any journey of poultry** shall be such that the comb or head does not touch the ceiling when **the** birds **are in a sitting position** sit with their head and neck in a natural posture or when they change position.

6.5. For **farmed lagomorphs** rabbits **for** slaughter the height of the container **The minimum ceiling height of containers in case of any journey of farmed lagomorphs** shall be sufficient to ensure that **farmed lagomorphs the animals can be in a crouched position without their ears touching the ceiling** sit with their ears extended.

PUBLIC

CHAPTER IV

ADDITIONAL PROVISIONS FOR LIVESTOCK VESSELS AND CONTAINER VESSELS

Revision of the whole Chapter for WP of 10-11 June 2026

PUBLIC

1. Construction and equipment requirements for livestock vessels

1.0. Livestock vessels shall be equipped with a ramp for loading and unloading the animals that meets the requirements set out in point 2 of Chapter III of this Annex.

1.1. ~~S~~ **The** s~~f~~trength ~~for~~ **of** pen rails and decks shall be appropriate to the **animals being** transported ~~animals~~. Strength calculations of pen rails and decks shall be verified […] by a ~~[~~**recognised organisation as defined in Regulation (EC) No 391/2009**~~,~~ **and authorised by a Member State in accordance with Directive 2009/15/EC**~~]~~ ~~in one of the Member States~~**.** […][1].

1.2. […] **Livestock decks** where animals are **accommodated** […] shall be equipped with a forced ventilation system which gives sufficient capacity to […] **renew** the air in […] **the** entire volume **of the decks,** as follows:

(a) **minimum** 40 air changes per hour if the ~~compartment~~ **deck** is fully enclosed and the clear height is less or equal to 2,30 meters;

(b) **minimum** 30 air changes per hour if the ~~compartment~~ **deck** is fully enclosed and the clear height is more than 2,30 meters;

(c) **minimum** 75 % of the above relevant capacity if the […] **deck** is partially enclosed.

---

[1] **Proposed wording aligned with article 13(2)(c). A 10-year transition period is proposed for this point and for point 2(c) of Article 13 to be included in articles 58 and 59.**

The forced ventilation system shall have the capacity to maintain a minimum air velocity of 0,5 m/sec throughout all decks.

1.3. Storage or production capacity for fresh water **for the animals** shall be appropriate to meet the water requirement laid down in **point 2.** […] **Storage tanks for fresh water shall be used exclusively for the purpose of storing water for the animals. ~~It~~ shall be clearly and visibly marked as 'fresh water for animals' and shall be fitted with a system allowing their water level to be checked. The storage tanks shall be maintained so as not to have an adverse impact on the quality of the water.**

1.4. The fresh water **distribution** system shall be capable of supplying fresh water continuously in each ~~livestock area~~ **pen where animals are accommodated.** […]

All animals **shall** have easy and constant access to **sufficient quantities of** fresh water.

Each pen shall have watering devices that are in good working order, appropriately designed and positioned taking into account the species, categories and size of the animals. The number of watering devices in each pen shall be sufficient to minimize any aggressive or competitive behaviour between the animals.

Alternative pumping equipment shall be available to ensure water supply in the event of failure of the primary pumping **equipment** […].

1.4a. If feeding equipment is used, it shall be secured to ensure that it does not tip over during transport and shall be adapted to the species, categories and size of the animals. ~~and t~~The number of feeders in each pen shall be sufficient to allow all animals of the pen to feed simultaneously ~~minimize any aggressive or competitive behaviour between the animals. In such a case, the feeding equipment shall be secured to ensure that it does not tip over during transport.~~

1.5. The drainage system shall be of ~~appropriate~~ **sufficient** capacity to drain fluids from pens and decks under all conditions. Drainpipes and channels shall collect the fluids in wells or tanks from where sewage can be discharged by means of pumps or ejectors. Alternative pumping equipment shall be available to ensure drainage in the event of failure of the primary pumping **equipment** […].

PUBLIC

1.6. Livestock […] **decks**, passageways and ramps to livestock […] **decks** shall be provided with sufficient lighting. **The lighting regime in the livestock decks shall follow a diurnal rhythm.** Emergency lighting shall be available in case of a failure of the main electrical installation. Sufficient portable lighting shall be provided to allow **for the** […] adequate **checks and the provision of** care […] **to** the animals.

1.7. A **fire detection and** firefighting system shall be appropriately installed in all […] areas **where animals are accommodated** and fire equipment within these […] areas shall comply with […] the International Convention for the Safety of Life at Sea (SOLAS) standards regarding fire protection, fire detection and fire extinction. **The firefighting equipment shall be maintained in good working order.**

1.8. The following systems for livestock shall be equipped with a monitoring, control and alarm system in the wheelhouse:

(a) ventilation;

(b) fresh water supply […];

(ba) drainage;

(c) lighting;

(d) fresh water production**,** […] **where applicable**.

1.9. A primary source of power shall be sufficient to supply continuous power for the systems for livestock referred to in points 1.2, 1.4, 1.5 and 1.6 under normal operation of the livestock vessel. A secondary source of power shall be sufficient to replace the primary source of power for a continuous period of **at least** three days.

1.10. Livestock vessels shall be equipped with a means of killing suitable for the species transported with written instructions in a language that **animal welfare officers** ~~attendants~~ understand.

1.11. Each deck of the livestock vessel shall have ~~a~~ at least one hospital pen ~~with dimensions adapted to the species, categories and maximum number of animals transported~~;

PUBLIC

1.~~11a~~ 12. The capacity of the hospital pens per deck shall be sufficient to accommodate at least ~~0,5~~1% of the total number of animals being transported on the deck. The accommodation of animals in the hospital pens shall comply with the applicable space allowance for the species concerned set out in Chapter VI of this Annex.

1.~~14~~ 13. Each deck shall ~~have~~ be equipped with humidity and temperature sensors positioned so as to provide accurate measurements representative for the entire deck and a means of recording these data. In addition, livestock vessels shall be equipped with ammonia sensors, which may be portable;

[1.14~~a~~.The humidity, temperature and ammonia levels for the entire deck shall be measured and recorded at least at the same intervals as set out in Article 21(3)(aa) ~~daily~~. The records shall be kept for a period of 5 years and made available to the competent authority upon request.]

1.~~16~~ 15. Each pen shall be enclosed by vertical fences or walls.

2. Feed, bedding and water supply on livestock vessels or container vessels

2.1. Livestock vessels […] **and container** vessels […] shall carry […] sufficient **amounts of** bedding**,** as well as sufficient feed and water […] **to meet** the minimum daily […] requirements set out in **the** Table […] **to cover the time needed** for **the loading and** the intended journey **and an additional contingency supply of at least [25%] or three days, whichever is greatest** […]. [2]

~~**The contingency plan referred to in Articles 7 and 8 shall include arrangements for additional supply of feed and water in case the contingency supply is insufficient.**~~

~~[~~By way of derogation from the first subparagraph, if a functional desalination system is in place, the vessel's water tank capacity shall be sufficient to carry a minimum ~~2~~ 3 ~~-~~day supply of fresh water for the animals.~~]~~

[2] **The definition of container vessel is proposed to be amended.**

Table

Minimum daily feed and water supply on livestock vessels or container vessels

Category	**Feed** (in % of ~~live~~ weight of animals)		**Fresh water** (in % of ~~live~~ weight of animals)
	Fodder	**Concentrated feed**	
[…] **Animals of the** bovine and equine […] **species**	2	1,6	10
[…] **Animals of the ovine and caprine species**	2	1,8	
[…] **Animals of the porcine species**	—	3	

Fodder may be replaced by concentrated feed and vice versa, […] **provided that the animals have been** accustomed to the change of feed **prior to the journey** […].

2.2. The contingency plan referred to in Article 18(3) shall include arrangements for additional supply of feed and water in case the contingency supply is insufficient.

2.3. The feed shall be protected from sea water, the weather and from contaminants such as fuel and exhaust gases.

PUBLIC

3. Ceiling height

~~3.1. For~~ On livestock vessels, the minimum ceiling height of each pen shall be [2 meters].

~~3.2. For containers for large animals in container vessels, the ceiling height be adapted to the species of animals transported.~~[3]

4. Additional provisions for container vessels.

4.1. When loading containers for large animals onto a container vessel, the containers for large animals shall be placed so as to~~:~~

~~(a) protect the animals from sea water and adverse weather conditions;~~[4]

~~(b)~~ allow access to the animals for the animal welfare officer and the staff handling the animals.

4.2. Containers for large animals shall be loaded and unloaded without undue delay.

4.3. Point 1.3 shall apply to container vessels.

[4.4 Containers for large animals shall be designed and constructed so as to allow separation and treatment of sick and injured animals. If this is not possible, a separate container shall be available for this purpose.]

---

[3] **Proposed to be deleted because current point 6 of Chapter III was changed to cover containers for large animals and has been moved to Chapter VII.**

[4] **Now in point 1.1c of Chapter III.**

CHAPTER V

JOURNEY TIMES, TEMPERATURES, REST PERIODS AND WATERING AND FEEDING INTERVALS AND HYDRATION

1. Poultry, farmed lagomorphs and weaned domestic animals of equine, bovine, ovine, caprine and porcine species transported by road, rail or sea

New changes in this Chapter proposed at this stage are limited to point 1.3.

1.1. **Weaned domestic animals of equine species**[1]

(a) Attendants shall ensure that weaned domestic animals of the equine species, transported by land, are provided with feed and water *ad libitum.* If water or feed *ad libitum* […] **are** not available, they shall be provided to the animals at intervals of no longer than 4,5 hours, for periods of 30 minutes.

(b) The same watering and feeding regime shall be ensured by:

- keepers at assembly centres, control posts and handling facilities at ports and airports;
- animal welfare officers during the leg of the journey by a livestock vessel, except between 21h00 and 6h00;
- attendants during the leg of the journey by a roll-on-roll-off vessel, except between 21h00 and 6h00.

1.2. W**eaned domestic animals of the bovine, ovine, caprine and porcine species**

(a) Attendants shall ensure that weaned domestic animals of the bovine, ovine, caprine and porcine species, transported by land, are provided with water *ad libitum.* If water is not available *ad libitum*, in the case of domestic animals of the bovine, ovine and caprine species, the animals shall be provided with water at least during the break periods and during the rest periods laid down in Article 26a.

---

1 *Proposal to add titles.*

(b) Attendants shall ensure that weaned domestic animals of the bovine, ovine, caprine and porcine species, transported by land, are provided with feed during the rest periods and in the case of domestic animals of the bovine, ovine and caprine species also during the break periods laid down in Article 26a.

(c) Water shall be provided *ad libitum* and feed shall be provided at intervals of no longer than 12 hours by:

- keepers at assembly centres, control posts and handling facilities at ports and airports;

- animal welfare officers during the leg of the journey by a livestock vessel;

- attendants during the leg of the journey by a roll-on roll-off vessel.

1.3. For poultry **other than day-old chicks** and weaned farmed lagomorphs transported for more than 12 hours **and for day-old chicks transported for more than 48 hours after hatching**, suitable feed and hydration shall be available **at the start of the journey** in ~~adequate~~ **sufficient** quantities **to ensure an adequate supply** throughout the journey.

1.6. By way of derogation from points 1.1 to 1.3, in case of transport to slaughter, attendants and keepers at assembly centres, control posts and handling facilities at ports and airports shall not be required to:

(a) provide weaned domestic animals of the equine, bovine, ovine, caprine and porcine species with feed for a period of time not longer than necessary to ensure hygiene at slaughter, adapted to the animal species and category concerned;

(b) provide poultry and farmed lagomorphs with feed and hydration during the last 12 hours of the journey.

2. Unweaned domestic animals of the equine, bovine, ovine, caprine and porcine species transported by road, rail or sea

2.1. Attendants shall ensure that unweaned domestic animals of the equine, bovine, ovine, caprine and porcine species are provided with water *ad libitum*.

PUBLIC

2.2. Attendants shall ensure that, at the beginning of the break period as referred to in Article 29(2)(c), unweaned domestic animals of the equine, bovine, ovine, caprine and porcine species are fed species-specific milk or appropriate milk replacement.

2.3 Keepers at assembly centres, control posts and handling facilities at ports shall ensure that unweaned domestic animals of equine, bovine, ovine, caprine and porcine species are provided with water *ad libitum* and fed species-specific milk or appropriate milk replacement no later than 12 hours after the previous feeding and thereafter at least every 12 hours.

2.4. Animal welfare officers and attendants shall ensure that, for the leg of the journey at sea, unweaned domestic animals of the equine, bovine, ovine, caprine and porcine species are provided with water *ad libitum* and fed species-specific milk or appropriate milk replacement no later than 12 hours after the previous feeding and thereafter at least every 12 hours.

2.5 By way of derogation from points 2.1 to 2.4, in case of transport to slaughter, attendants and keepers at assembly centres, control posts and handling facilities at ports and airports and animal welfare officers shall not be required to provide unweaned domestic animals of equine, bovine, ovine, caprine and porcine species with species-specific milk or appropriate milk replacement for a period of time not longer than necessary to ensure hygiene at slaughter, adapted to the animal species and category concerned.

3. Dogs and cats transported by road, rail or sea

3.1. Attendants shall ensure that dogs and cats are provided with feed and water at intervals of no longer than:

- 8 hours for dogs and cats of 6 months of age or older;
- 4 hours for dogs and cats younger than 6 months of age.

3.2. Keepers at assembly centres, control posts and handling facilities at ports and airports shall ensure that dogs and cats shall be provided with water *ad libitum* and that feed is provided at intervals of no longer than:

- 8 hours for dogs and cats of 6 months of age or older;
- 4 hours for dogs and cats younger than 6 months.

PUBLIC

4. Kept cervids and camelids transported by road, rail or sea

Kept cervids and camelids shall be transported in accordance with written instructions provided by the keeper at the place of departure about feeding and watering and taking into account any special care required.

5. Terrestrial animals transported by aircraft

Terrestrial animals transported by aircraft shall be fed and watered in such a way as to meet the physiological needs of the animals transported.

PUBLIC

PUBLIC

CHAPTER VI

ADDITIONAL PROVISIONS FOR LONG JOURNEYS OF **TERRESTRIAL ANIMALS BY ROAD, ~~AND~~ RAIL AND SEA** […]

Revision of the whole Chapter for WP of 10-11 June 2026.

1. Roof

[…] **Vehicles** ~~**other than vehicles equipped with the temperature control system referred to in Article 31 (1b)**~~ shall be equipped with a **properly insulated** roof ~~of light colour~~ **with a light-coloured** […] **external surface**.

2. ~~Floor and~~ Bedding

2.1. […] **Terrestrial animals** shall be provided with […] bedding […]**. The quality and quantity of the bedding shall be** appropriate to the species, the number of animals being transported, the **duration of the journey or** journeys […], and the weather **conditions,** […] so that **the** animals remain **comfortable**, clean and dry during the entire journey **or journeys**.

2.2. The bedding on road vehicles shall be replaced at least whenever the animals are unloaded at a control post or an assembly centre.

3. Feed **for terrestrial animals other than ~~poultry and~~ farmed lagomorphs and poultry**

3.1. The […] **vehicle** shall carry a sufficient quantity of appropriate […] **feed to ensure compliance with the provisions referred to in Chapter V of this Annex. The quantity of feed carried on the vehicle shall not be required to cover feed provided to animals at a control post or an assembly centre.** The […] **feed** shall be protected from the weather and from contaminants such as dust, fuel, exhaust gases and animal urine and […] **faeces**.

3.2. Where animals need to be fed by specific equipment **on a vehicle**, that equipment shall be transported in the […] **vehicle**.

3.3. Where feeding equipment as referred to in point 3.2~~.~~ is used, it shall be […] **secured to ensure** that **it does not tip over during transport.** […] The equipment shall be stored separate**ly** from the animals.

3.3a. Feed for weaned farmed lagomorphs and poultry ~~other than day-old chicks~~

In case feed for weaned farmed lagomorphs and poultry ~~other than day-old chicks~~ is required in accordance with points (a)~~.~~ (c) and ~~(c)~~ (d) of Article 27~~(3)~~ feed shall be provided in accordance with the following conditions:

~~**a) It shall be available in all containers**~~ […][1];

b) Space shall be provided within each container for the feed or feeding system;

c) The floor or the feeding equipment shall be constructed to ensure that the feed is contained;

d) The construction of the container shall allow each animal in the container to have access to feed;

e) The feed shall be protected from the weather and from contaminants such as dust, fuel, exhaust gases, ~~and~~ animal urine and faeces […]**.**

4. Partitions

4.1. […] **Vehicles not transporting animals in containers** shall be fitted with partitions so that separate compartments may be created, while […] **ensuring that all** animals **have** […] free access to **feed and to** water**, when provided**.

4.2. The partitions shall be constructed in such a way that they can be placed in different positions so that the size of compartments can be […] **adjusted** to the […] **species, categories** and number of animals.

---

[1] ~~**Requirement of having feed available in all containers is proposed to be m**~~**Moved to point 1.3 ~~in~~ of Chapter V of Annex I.**

[2] **Moved from point 5.2a of Chapter III of Annex I.**

4.3. Animals of the equine species other than mares with their foals shall be transported in individual stalls.[2]

5. Water supply for transport by road, rail, in containers for large animals and in containers for farmed lagomorphs and poultry ~~other than day-old chicks~~

5.1. **Vehicles** […] and containers for large animals shall be equipped with a water supply that makes it possible for […] water **to be provided** instantly whenever it is necessary during the journey, so that each animal has access to water.

5.1a. In case fresh water is used for the hydration of weaned farmed lagomorphs or for poultry~~,~~ ~~other than day-old chicks,~~ transported in containers, the system used to provide such animals with water shall comply with the following conditions:

a) It shall be installed, ~~and~~ connected to all containers and operational before the start of the journey;

b) It shall be easy to clean and disinfect;

c) Each animal in the container shall have access to water.

5.1b. In case hydrogel is used for the hydration of weaned farmed lagomorphs or poultry~~,~~ ~~other than day-old chicks,~~ transported in containers, the containers shall comply with the following conditions:

a) Space shall be provided within each container for the hydrogel;

b) The flooring of the container or of the receptacle for the hydrogel shall be constructed to ensure that the hydrogel is contained;

c) Each animal shall have access to the hydrogel.

~~5.2. […].~~ [2]

[2] **Point 5.2. is moved to Chapter II of Annex I.**

5.3. The water tanks' total capacity for each […] **vehicle or container for large animals** shall be at least equal to 1,5 % of its maximum payload. Water tanks shall be designed so that they can be drained and cleaned after each journey and shall be fitted with a system allowing their water level to be checked. They shall be connected to drinking devices within the compartments and maintained in good working order.

5.4. **By way of** […] derogation**,** […] point 5.3~~.~~ […]~~-~~**shall not** apply to containers for large animals exclusively used on vessels that supply water to them from the vessel's own water tanks.

6. Ventilation systems for […] vehicles

6.1. **Vehicles shall be equipped with a ventilation system.** ~~Ventilation systems on […] vehicle shall be designed, constructed and maintained in such a way that, at any time during the journey, whether the means of transport is stationary or moving, they are capable of operating for at least 6 hours the duration of the journey or journeys.~~

6.1a. The ventilation system shall be designed, constructed and maintained in such a way that it is capable of operating for at least 6 hours, independently of the vehicle engine, whether the means of transport is stationary or moving.

When the leg of the journey on board a roll-on-roll-off vessel is expected to last more than 6 hours, the ventilation system shall be capable of operating independently of the vehicle engine, including by connection to an external power source where necessary, for the duration of the leg of the journey on the roll-on-roll-off vessel.

6.2. The ventilation system […] **shall** be capable of ensuring […] **air circulation** throughout the […] **animal compartments, including containers, with a minimum airflow of nominal capacity of 60 m3/h/KN of payload.** ~~**It shall be capable of operating for at least 6 hours, independently of the vehicle engine.**~~

6.3. Vehicles shall be equipped with both a fixed and portable means of lighting, sufficient for checking and providing care to the animals during transport.

PUBLIC

CHAPTER VII

SPACE ALLOWANCE FOR TRANSPORTS BY ROAD, RAIL OR SEA OR AIR

New point 3 is proposed to be moved in this Chapter from point [illegible] of Chapter VI of this Annex I with some rewording. No other changes are proposed in this Chapter at this stage.

PUBLIC

1. Allometric equation to calculate space allowance for animals of bovine, porcine, ovine and caprine species, weaned farmed lagomorphs and poultry other than day-old chicks

1.1.1. **The ~~M~~minimum** space allowance for transport **of bovine, porcine, ovine and caprine species, weaned farmed lagomorphs and poultry other than day-old chicks** by road, by rail, or by sea **or air**, including transport in containers**, shall be** ~~is~~ calculated using the following allometric equation:

$A = kW^{(2/3)}$,

whereby: A=area per animal [m^2 **for animals of bovine, porcine, ovine and caprine species** or cm^2 for **weaned farmed lagomorphs and poultry other than day-old chicks** for transport of birds and rabbits in containers], W=live weight [kg], k= k-value **which is** ~~(~~specific to species/category, as **and is** laid down in tables below~~)~~.

1.1.2. The time mentioned in the tables below ~~includes~~ refers to the time the animal spends on the same road or rail vehicle without being unloaded, including any time the road or rail vehicle is on board of a roll-on roll-off vessel. In case of animals transported in containers, the time mentioned in the tables below refers to the time the container is on a road or rail vehicle, including any time the road or rail vehicle is on board of a roll-on roll-off vessel.

1.2. Bovine species

1.2.1. Space allowance **in m²** area per animal [m²] during **for** transport **of bovine species** by road, by rail, or by sea, shall **be calculated using the following minimum k-values**:

~~Bovine species~~	~~Time on a road or rail vehicle, including on a roll-on roll-off vessel~~			~~Livestock vessel~~	~~Air transport~~
	~~< 9 hours~~	~~9-21 hours~~	~~> 21 hours~~		
~~k-value~~	~~Weaned animals:~~ ~~0,0205~~ ~~Unweaned animals:~~ ~~0,0220~~	~~0,0270~~	~~0,0340~~	~~0,0340~~	~~[To be decided]~~

Bovine species	**Time on a road or rail vehicle, including on a roll-on-roll-off vessel**			**Livestock vessel**	**Air transport**
	< 9 hours	**9-21 hours**	**> 21 hours (applicable only for road or rail vehicles loaded on a roll-on-roll-off vessel)**		
k-value for unweaned animals	**0.0220**	**0.0270**	**0.0320**	**0.0320**	**[To be decided]**
k-value for weaned animals	**0.0205**	**0.0270**	**0.0320**	**0.0320**	**[To be decided]**

PUBLIC

1.2.2. **If the external temperature is predicted to be above 30ºC at any point along the route ~~the place of departure and the place of destination, and where relevant at assembly centres, ports, airports, control posts, border crossings between Member States, border crossings between third countries and exit points from the Union~~, and the means of transport is not equipped with a temperature control system as described in Article 31(1b), the space allowance per animal shall be increased by at least 10 percent, except where the above table sets a k-value of ~~0,0369~~ 0,0379.**

1.2.3. **In case of transport of bovine animals with horns, space allowance shall be increased on the basis of the above table to accommodate the physical size of all animals and prevent injuries.**

1.3. **Porcine species**

1.3.1. **Space allowance in m^2 per animal for the transport of porcine species shall be calculated using the following minimum k-values:**

Porcine species	Time on a road or rail vehicle, including on a roll-on-roll-off vessel			~~Time on a~~ Livestock vessel	Air transport
	< 9 hours	9-21 hours	> 21 hours (applicable only for road or rail vehicles loaded on a roll-on-roll-off vessel)		
k-value	0.0197	0.0230	0.0270	0.0270	[To be decided]

PUBLIC

1.3.2. **If the external temperature is predicted to be above 30ºC <u>at any point along the route</u> ~~the place of departure and the place of destination, and where relevant at assembly centres, ports, airports, control posts, border crossings between Member States, border crossings between third countries and exit points from the Union~~, and the means of transport is not equipped with a temperature control system as described in Article 31(1b), the space allowance per animal shall be increased by at least 10 percent, except where the above table sets a k-value of 0.0270.**

1.4. **Ovine and caprine species**

1.4.1. **Space allowance in m^2 per animal for the transport of ovine and caprine species shall be calculated using the following <u>minimum</u> k-values:**

Ovine and caprine species (shorn)	Time on a road or rail vehicle, including on a roll-on-roll-off vessel			Livestock vessel	Air transport
	< 9 hours	9-21 hours	> 21 hours <u>(applicable only for road or rail vehicles loaded on a oll-on-roll-off vessel)</u>		
k-value	~~0,0260~~ <u>0.0240</u>	~~0,0310~~ <u>0.0290</u>	~~0,0370~~ <u>0.0350</u>	~~0,0370~~ <u>0.0350</u>	[To be decided]

1.4.2. **If the external temperature is predicted to be above 30ºC <u>at any point along the route</u> ~~the place of departure and the place of destination, and where relevant at assembly centres, ports, airports, control posts, border crossings between Member States, border crossings between third countries and exit points from the Union~~, and the means of transport is not equipped with a temperature control system as described in Article 31(1b), the space allowance per animal shall be increased by at least 10 percent~~, except where the above table sets a k-value of 0,0370~~. <u>This increase shall not be applied if an increase has already been applied in accordance with point 1.4.3.</u>**

PUBLIC

1.4.3. If unshorn ovine animals are transported, the space allowance per animal shall be increased by at least ~~10~~ 20 percent~~, except where the above table sets a k-value of 0,0370~~.

1.4.4. In case of transport of ovine or caprine animals with horns, space allowance shall be increased on the basis of the above table to accommodate the physical size of all animals and prevent injuries.

1.5. Weaned farmed lagomorphs

1.5.1. Space allowance in cm^2 per animal for the transport of weaned farmed lagomorphs shall be calculated using the following minimum k-values:

Weaned farmed lagomorphs	Time on a road or rail vehicle, including on a roll-on-roll-off vessel			Air transport
	< 12 hours	12 – 36 hours	> 36 hours (applicable only for road or rail vehicles loaded on a oll-on-roll-off vessel)	
k-value	[200]	[270]	[350]	[To be decided]

1.5.2. If the external temperature is predicted to be above 30ºC at any point along the route ~~the place of departure and the place of destination, and where relevant at assembly centres, ports, airports, control posts, border crossings between Member States, border crossings between third countries and exit points from the Union~~, and the means of transport is not equipped with a temperature control system as described in Article 31(1b), the space allowance per animal shall be increased by at least 10 percent, except where the above table sets a k-value of 350.

1.6. Poultry other than day-old chicks

1.6.1. Space allowance in cm^2 per animal for the transport of poultry other than day-old chicks shall be calculated using the following minimum k-values:

Poultry other than day-old chicks	Time on a road or rail vehicle, including on a roll-on-roll-off vessel			Air transport
	< 12 hours	12 – 21 hours	> 21 hours (applicable only for road or rail vehicles loaded on a oll-on-roll-off vessel)	
k-value	195	240	290	[To be decided]

1.6.2. If the external temperature is predicted to be above 30ºC at any point along the route ~~the place of departure and the place of destination, and where relevant at assembly centres, ports, airports, control posts, border crossings between Member States, border crossings between third countries and exit points from the Union~~, and the means of transport is not equipped with a temperature control system as described in Article 31(1b), the space allowance per animal shall be increased by at least 10 percent, except where the above table sets a k-value of 290.

2. Space allowance for the transport by road, rail, sea or air of animals of the equine species, day-old chicks, unweaned farmed lagomorphs and dogs and cats

2.1. Space allowance for transport of animals of the equine species

2.1.1. When animals of the equine species are transported in groups or when a mare is transported with her foal, the stocking density in the animal compartment or in the pen shall not exceed 200 kg/m^2.

PUBLIC

2.1.2. **When animals of the equine species are transported in individual stalls[1], the width of the stall shall allow for ~~at least 20 cm~~ free space on each side of the animal where the animal is widest and at ground level, to ensure that the animal can assume a broad stance. The length of the stall shall allow for ~~at least 30 cm~~ free space in front of the head of the animal while the neck is parallel to the ground.**

2.1.3. **[Air transport of animals of the equine species – to be decided]**

2.2. **The space allowance for transport of day-old chicks shall be at least 20 cm² per chick of the gallus gallus species and at least 25 cm² per chick for larger species.**

2.3. **Where unweaned farmed lagomorphs are transported in their nest, the space allowance shall be sufficient to accommodate the nest and preserve the thermal comfort and air circulation.**

2.4. **For dogs and cats transported in containers or compartments, the space allowance shall meet at least the following requirements:**

~~(a) A maximum of two adult dogs or cats each weighing not more than 14 kg are transported in the same container or compartment.~~

~~(b) Dogs or cats is able to turn around and shall have have free access to water and feed if provided in the container or the compartment.~~

(ae) In case one dog or cat is transported in the container or compartments~~:~~

~~i. T~~the animal is able to assume a standing and sitting posture, ~~and~~ to turn around and to lie down normally and rest in a natural position without being in any way obstructed by the structure of the container or the compartment.

~~ii. The animal is able to assume sternal recumbency.~~

~~iii. The internal width of the container or the compartment is at least twice the width of the animal at the widest point.~~

---

[1] **A new point 5.2a ~~will be~~ is added in Chapter III of Annex I: "Animals of the equine species other than unbroken horses and mares with their foals shall be transported in individual stalls."**

(b) In case more than one dog or cat is transported in the same container or compartment:

i. A maximum of two adult dogs or cats of comparable size each weighing not more than 14 kg, that are used to cohabiting, may be transported in the same container or compartment.

ii. A maximum of three weaned puppies or kittens from the same litter, not older than six months and weighing no more than 14 kg each may be transported in the same container or compartment.

iii. For unweaned puppies or kittens transported with their mother, the area of the container or compartment shall be large enough for all animals to lie in a lateral position with their legs extended at the same time.

All animals are able to assume a standing and sitting posture, to turn around and to lie down normally and rest in a natural position without touching other animals and without being obstructed by the structure of the container or the compartment.

(c) Animals over 14 kg shall be crated individually, except in case of point b(iii).

(d) When water and feed are provided in the container or compartment, all animals shall have access to both.

~~**(d) In case two adult dogs or cats are transported in the container or compartments,the width of the container or the compartment is at least three times the width of the widest animal.**~~

~~**(e) In case puppies or kittens are transported with an adult dog or cat in the container or compartment, the area of the compartment is increased by 50 percent per each additional animal.**~~

[…]

3. Minimum […] ceiling height for transport by road, rail and in containers for large animals[2]

[2] **This point is moved here from point 6 of Chapter III of this Annex I. The marking indicates changes compared to the previous version of that point.**

~~6.1.~~ […]

3.1. **The minimum ceiling height of compartments in case of animals of the bovine species shall be~~:~~**

~~**(a) for short journeys, at least [20] cm above the withers of the tallest animal;**~~

~~**(b) for long journeys, determined in accordance with the following formula:**~~

~~***H = W (cm) x 1.17 + [10] cm***~~

~~**where H = minimum ceiling height in cm, and W = wither height of the tallest animal in the compartment in cm.**~~ **sufficient to prevent any animal from touching the ceiling with the top of their head or their horns while standing with their head in natural upright position.**

~~6.1a~~ **3.2.** **The minimum ceiling height of compartments in case of any journey of animals of the porcine species shall be at least [15] cm above the highest point of the tallest animal in a standing position in vehicles with mechanical ventilation and [30] cm in naturally ventilated vehicles.**

~~6.2.~~ **3.3.** […] **The minimum ceiling height of compartments in case of any journey of animals of the ovine and caprine species** shall be at least 15 cm **above the highest point of the tallest animal in a standing position** in vehicles with mechanical ventilation and 30 cm in naturally ventilated vehicles.

~~6.3.~~ **3.4.** […] **The minimum ceiling height of compartments in case of any journey of animals of the equine species** shall be at least 75 cm […] **above** the withers of the tallest animal.

[By way of derogation, for vehicles designed for the transport of not more than two animals of the equine species, the minimum ceiling height of compartments shall be determined in accordance with the following formula, provided that the animals are able to maintain a natural standing position without any part of the animals touching the ceiling:

H = W (cm) x 1.3

PUBLIC

where H = minimum ceiling height in cm, and W = wither height of the tallest animal in the compartment in cm.]

~~6.4.~~ **3.5.** […] **The minimum ceiling height of** containers **in case of any journey of poultry** shall be such that the comb or head does not touch the ceiling when **the** birds **are in a sitting position** ~~sit~~ with their head and neck in a natural posture […]

~~6.5~~. **3.6.** […] **The minimum ceiling height of containers in case of any journey of farmed lagomorphs** shall be sufficient to ensure that **the animals can be in a crouched position without their ears touching the ceiling when raised** […].

3.7. For other animals, sufficient space shall be provided inside the animals' compartment and at each of its levels and inside containers, to ensure that there is effective air circulation.

PUBLIC

ANNEX II[1]

Revision of the whole Annex for WP of 10-11 June 2026

PUBLIC

SPECIFIC CONDITIONS FOR THE TRANSPORT OF AQUATIC ANIMALS

As referred to in Articles 2, 12a, 17 ~~18~~, 19, 20, 21, 25, 33, 36a, 44 and 47

CHAPTER I

FITNESS FOR TRANSPORT

1. **The ability of the aquatic animals to cope with the stress of transport shall be assessed based on their species, age, size, health status, previous handling, and recent exposure to stressors.**

2. **Aquatic animals shall not be considered fit for transport in particular if they:**

(a) **show clinical signs of disease;**

(b) **present an infestation of parasites if it is likely to cause pain, suffering, or decline in health during transport;**

(c) **have injuries, including haemorrhaging~~,~~ and deep lesions exposing muscle, or are severely emaciated;**

(d) **show abnormal behaviour; ~~or appear moribund and are unable to move independently, with the exception of aquatic animals that are sedated or in a state of induced torpor due to low temperature~~;**

---

[1] **Movements of aquatic animals by a tow boat or a fishing boat and transport of eggs, embryos and larvae of aquatic animals are suggested to be excluded from the scope of this Regulation.**

(da) appear moribund;

(e) have not been fasted prior to transport for gut clearance in accordance with species-specific requirements;

(f) have been recently exposed to stressors that adversely affect behaviour or physiological state such as extreme temperatures or chemical agents;

(g) in the case of fish, show clinical signs such as:

(i) excessive scale loss affecting skin integrity;

(ii) severe eye lesions;

(iii) damage to or severe discoloration of the gills, skin or fins;

(iv) loss of equilibrium or swim bladder disorders;

(v) excessive mucus secretion.

Point (d) shall not apply to aquatic animals that are sedated in accordance of point 1.4 of Chapter III of this Annex or are in a state of induced torpor due to low temperature in accordance with point 1.5 of Chapter III of this Annex.

PUBLIC

CHAPTER II

MEANS OF TRANSPORT AND CONTAINERS FOR AQUATIC ANIMALS

1. Design and maintenance of means of transport […] and containers for aquatic animals[2]

1.1. Means of transport and containers […] **for** aquatic animals **including their fittings** shall be appropriate to the species, **age,** size, weight and number of **aquatic** animals to be transported.

1.2. Means of transport and containers **for aquatic animals including their fittings** shall be […] **designed, constructed~~,~~ and maintained ~~and operated~~ so as to**:

(a) avoid injury of the aquatic animals;

(b) ~~protect the aquatic animals from extreme temperatures~~ maintain the necessary species-specific temperature range during transport;

(c) prevent the aquatic animals from escaping or falling out;

(d) minimise exposure of the aquatic animals to noise, light and vibrations that may negatively affect their welfare ~~of the aquatic animals~~;

(e) be easi~~l~~y to clean~~ed~~ and disinfect~~ed~~.

1.3. ~~**Road vehicles**~~ Means of transport and containers **for aquatic animals including their fittings** shall ensure adequate […] oxygenation as required to meet variations in the conditions during the journey and the needs of the **aquatic** animals being transported […].

~~1.4 […].~~[3]

1.5. ~~**Road vehicles**~~ Means of transport and containers **for aquatic animals including their fittings** shall **be designed, constructed~~,~~ and maintained ~~and operated~~ so as to** allow for:

---

[2] **See new definition 21a for container for aquatic animals.**

[3] **Covered by point 1.5 of this Chapter.**

(a) […] **checking the condition of the consignment;** […]

(b) **when aquatic animals are transported in water**, monitoring of the […] **water** parameters **set out in point 3.2 of Chapter VI, and**

(c) […] **taking** corrective measures when necessary.

1.6. Containers for aquatic animals, including containers containing bags with aquatic animals, shall be clearly and visibly marked, indicating the presence of live animals and with a sign indicating the top of the container.

1.7. Means of transport shall be equipped with a fixed or portable means of lighting, sufficient for checking the condition of the consignment.

PUBLIC

PUBLIC

CHAPTER III

TRANSPORT PRACTICES

1. Handling

1.1. Aquatic animals shall **be handled gently and according to their species, age and size and they shall** not be lifted by their gills **or any appendages such as fins, legs, antennae or claws**.

1.2. The handling equipment shall be **suitable for the species, age and size of the aquatic animals being transported and shall be** designed, constructed, […] maintained **and operated so as** to […] **avoid** injuries **and unecessary stress**.

1.3. For aquatic animals transported in water, the duration of any handling outside the water shall be as short as possible.

1.4. The necessary species-specific temperature range shall be maintained during the transport.

1.5. When aquatic animals are transported in a state of induced torpor, this shall be achieved by gradually lowering the temperature of the water or, in the case of animals transported out of water, by lowering the temperature of the air. The lowered temperature of the water or of the air shall be maintained throughout the journey.

1.6. Sedatives shall not be used on aquatic animals to be transported unless it is necessary to ensure the welfare of the animals and shall only be used under the supervision of a veterinarian. The veterinarian shall provide written documentation of the use of such substances, which shall accompany the animals and shall be made immediately available to the competent authority on its request.

1.7. Injury of the aquatic animals shall be avoided.

1.8. Escaping or falling of aquatic animals from the means of transport or containers for aquatic animals shall be prevented.

1.9. Exposure of the aquatic animals to noise, light and vibrations that may negatively affect their welfare shall be minimised.

2. Loading practices

2.1. Prior to loading, the following shall be assessed:

(a) the crowding procedure with regard to duration, stocking density and observable signs of distress in the aquatic animals;

For the purpose of this point, 'crowding procedure' means the process of progressively concentrating aquatic animals in a reduced water volume or space.

(b) construction or operation of equipment to be used for loading;

(c) the need for acclimatisation of aquatic animals;

(d) homogeneity of the size of the aquatic animals being transported to prevent aggressive behaviour.

If the assessment of points (a) to (d) reveals conditions that may negatively affect the welfare of the aquatic animals to be transported, corrective measures shall be taken before loading.

2.2. During loading, measures shall be taken to avoid any injury and unnecessary stress to the aquatic animals.

2.3. The density of aquatic animals in a means of transport and/or container for aquatic animals shall be maintained within limits which meet the specific needs related to the species, age and size of the aquatic animals being transported. The duration of the journey or journeys shall be taken into account. For aquatic animals being transported in water, every aquatic animal shall be able to change its position freely.

2.4. The containers for aquatic animals shall be secured to the means of transport before the start of the journey to prevent their displacement ~~during the transport~~due to the movement of the means of transport.

PUBLIC

3. Water for aquatic animals transported in water

3.1. […] **When aquatic animals are transported in water, the** water **parameters**~~quality~~ […] **and water quantity during the journey shall be** appropriate for the species**, age and size of the aquatic animals** being transported […].

3.2. […] **T**he monitoring ~~and maintenance~~ of **at least** the following water parameters **and their maintenance during the journey** within ~~the~~ limits **meeting** ~~according to the species~~ specific needs **related to the species, age~~,~~ and size of the aquatic animals being transported, shall be ensured** […].

(a) Oxygen ~~**concentration and**~~ **saturation**;

~~(b) […]~~

~~(c) […]~~

(d) Temperature**;**

(e) pH;

(f) In case of transport in saline water, salinity.

[3.3. The monitoring referred to in point 3.2 shall be carried out at least:

(i) at the place of departure;

(ii) in the case of road transport, whenever the driver is required to take a rest or a break in accordance with Regulation (EC) No 561/2006~~,~~. In case the driver performs the function of attendant, this check shall take place immediately before the rest or the break of the driver. ~~or, i~~In case of vehicles falling outside the scope of that Regulation, the check shall take place at least every 4,5 hours from the departure of the vehicle;

(iii) whenever the vehicle stops for the purpose of replacing the water;[4]

---

[4] **The following new point is proposed to be added in Annex Va as point 1 e): "In case of transport of aquatic animals on long journeys by road include locations for replacing the water if needed".**

(iiia) upon arrival at handling facilities at ports or airports and thereafter every 4,5 hours during their stay at those facilities;

(iv) in the case of transport by well-boats, every 4,5 hours; and

(v) at the place of destination.

Points (ii), (iiia) and (iv) shall not apply to the monitoring of the parameter referred to in point 3.2(f).

3.4. ~~For long journeys t~~The values monitored in accordance with point 3.2 shall be recorded ~~in the journey log~~. [The records shall be kept for a period of 5 years and made available to the competent authority upon request.]

3.5. Where the monitoring in accordance with point 3.2 shows values that are outside limits meeting the specific needs related to the species, age~~,~~ and size of the aquatic animals being transported, corrective actions shall be implemented.~~]~~[5]

3.6. By way of derogation from point 3, in case aquatic animals are transported in bags, point 5 applies.

4. […]

5. […]

~~6.~~ […]

~~6.1. […].~~[6]

~~6.2. […].~~[7]

~~[5] Elements included in points 3.3 – 3.5. could be placed in an appropriate article of Chapter 5 (Obligation during transport) instead.~~

[6] This point is proposed to be deleted as it is covered by paragraph 1 of article 19 for transport by road and rail, the new proposed point (f) of paragraph 4a of article 19 for transport by road or rail, for which a leg of the journey includes transport by a roll-on-roll-off vessel and the new proposed amendment of point (aa) of paragraph 3 of article 21 for transport by well-boat.

[7] This point is proposed to be deleted as it is covered by points 3.1. to 3.5.

~~6.3. [...].~~[8]

~~6.4. [...].~~[9]

~~6.5. [...].~~[10]

7. Unloading practices

7.1. […] **During unloading, measures shall be taken to avoid any injury and unnecessary stress to the aquatic animals.**

7.2. […] ~~**The aquatic animals shall be unloaded without undue delay** as soon as possible after arrival at the destination~~ […].[11]

7.3. […] **Measures shall be taken** for acclimatisation of **aquatic animals** […] **prior to unloading** into water of a […] different quality such as temperature, salinity **or** pH.

7.4. […] **At the place of destination,** moribund […] ~~**and dead**~~ aquatic animals […]~~-~~**shall be removed and killed as soon as possible**, using an appropriate method suitable for the species and size of the animal**s** and preventing unnecessary suffering **and dead aquatic animals shall be removed as soon as possible**.

~~**5.**~~ **7a. Transport of aquatic animals in bags with water**

~~**5.**~~ **7a.1. Where aquatic animals are transported in bags with water, the bags shall be designed, filled and handled in such a way as to maintain appropriate water quality throughout the journey, taking into account the species being transported, the stocking density and the duration of transport.**

---

8 **This sentence is proposed to be deleted as it is covered by paragraph 2a of article 19.**

9 **This point is proposed to be deleted as it is covered by paragraph 2 of article 19 as amended for the attendants and the new amendment of point (b) of paragraph 3 of article 21 for the animal welfare officers**.

10 **This point is proposed to be deleted due to feasibility constraints for the killing of aquatic animals during transport**.

11 **This point is proposed to be deleted because Article 25(0) has been amended to cover the unloading of aquatic animals also.**

~~5.~~ 7a.2. The material of the bags shall be of sufficient thickness to withstand the weight of the water and aquatic animals, internal pressure changes and, for species with spines or sharp protrusions, shall be puncture-resistant.

~~5.~~ 7a.3. Bags shall be properly sealed, protected from damage and secured during transport so as to prevent leakage, excessive movement or exposure to adverse environmental conditions.

~~5.~~ 7a.4. The water ~~level~~ quantity shall be sufficient for all aquatic animals to be completely immersed and be able to ~~move when the bag is in its transport position~~ change their position freely.

~~5.~~ 7a.5. The bags shall be placed ~~upright~~ in a rigid, water resistant container that provides thermal insulation and maintains darkness. The bags shall be placed in a manner that they stay stable, leakages are prevented and gases are adequately exchanged between the water and the air inside the bags.

~~5.6. The outer container in which the bags are transported shall be clearly and visibly marked, indicating the presence of live animals and with a sign indicating the top of the container.~~

~~5.~~ 7a.6. When the containers referred to in point 5.5 are opened, aquatic animals shall not be exposed to intense or sudden light.

~~6~~ 7b. Transport of aquatic animals in containers for aquatic animals and not immersed in ~~out of~~ water

~~6~~ 7b.1. Aquatic animals shall only be transported in containers for aquatic animals and not immersed in ~~out of~~ water where:

(a) the species is physiologically adapted to withstand temporary air exposure;

~~(b) the duration of transport is kept as short as possible;~~[12]

[12] This point is already covered by Article 4(2)(a)

(c) the conditions under which the aquatic animals are transported, including the level of humidity in the container, ~~during transport~~ meet their specific needs related to the age, size and species ~~of the aquatic animals being transported~~.

~~6~~ 7b.2. Where ice or coolants are used, they shall be separated from the aquatic animals by a physical barrier so as to prevent thermal shock or freezing injuries resulting from direct contact or meltwater.

~~8. [...]~~

~~8.1. [...]~~[13]

~~8.2. [...]~~[14]

~~8.3. [...]~~[15]

[13] Observation at arrival will be covered by Articles 25 and 26, once the Commission uses the empowerment in the last sub-paragraph of Article 26(1).

[14] Proposed to be deleted since it is now covered by the amended second sub-paragraph of article 25(0).

[15] Once the Commission uses the empowerment in the last sub-paragraph of Article 26(1), this will be covered by requirement for organisers and transporters to document measures they put in place, in case indicators measured at arrival indicate important negative animal welfare consequences (see article 6(3)(c) for organisers and article 9(3)(b) for transporters).

- **ANNEX III**

Templates as referred to in Articles 14, 15, ~~16~~, 19, 20, 25, 32, 38 and 47

No new changes proposed at this stage

ANNEX Va

CONTINGENCY PLAN

As referred to in Articles 7, ~~and~~ 8, 18 and 47

Replacement of the whole Annex.

N.B.: As this Annex has been added to the initial Commission proposal, it should be marked as new text (= **bold**). In this version, the previous changes included in document 6013/26 INIT are marked as 'already discussed' (see the explanation on the marking on the cover page). All new changes are highlighted in yellow.

PUBLIC

1. **For each of the contingencies referred to in point 2, for each part of the journey for which the transporter is responsible, the contigency plan shall:**

   a) **designate the level of responsibility and decision making and the persons responsible for specific actions which transporters, attendants, drivers or animal welfare officers, as applicable, are to take;**

   b)~~(c)~~ describe the ways to address the contingency and to maintain or restore the welfare of the animals transported;

   c)~~d)~~ include the contact details of the persons to be contacted in case of need, for each contingency, including the emergency contact number of the transporter and of the organiser;

   d) **describe procedures for emergency killing and safe disposal of carcasses;**

   e) in case of transport of aquatic animals on long journeys by road include locations for replacing the water if needed.

2. **The contingency plan shall address at least the following contingencies:**

   a) **significant delays during the journey;**

   b) **change of the planned route;**

   c) **in case of exports to third countries, refusal of entry into the territory of the third country;**

d) delays in loading and unloading;

e) accident involving the means of transport or animals

f) breakdown or malfunctioning of the equipment or the means of transport;

g) unforeseen high or low external temperatures or temperatures in the animal compartment that are outside of the limits laid down in Article 3(10);

h) unforeseen adverse weather conditions, natural disasters or infrastructural failures;

i) animals becoming unfit for continuation of the transport;

j) outbreak of a transmissible disease in the region of the place of departure or at the place of destination or place of rest, or occurrence of such a disease in the animals transported;

k) escaped animals;

l) sudden illness of the driver, the attendant or the animal welfare officer;

m) arrangements for additional supply of feed and water on livestock vessels or container vessels in case the contingency supply is insufficient.

PUBLIC
