Subject:	Proposal for a Regulation of the European Parliament and of the Council laying down measures to strengthen solidarity and capacities in the Union to detect, prepare for and respond to cybersecurity threats and incidents - Revised mandate for negotiations with the European Parliament

---

**I. INTRODUCTION**

1. On 18 April 2023, the Commission adopted the proposal for a Regulation of the European Parliament and of the Council laying down measures to strengthen solidarity and capacities in the Union to detect, prepare for and respond to cybersecurity threats and incidents, the “EU Cyber Solidarity Act”. The EU Cybersecurity Strategy adopted in December 2020 mentioned the creation of a European Cyber Shield, reinforcing the cyber threat detection and information sharing capabilities in the European Union. On 8 and 9 March 2022, Ministers of EU Member States in charge of Telecom issues met informally in Nevers and expressed the wish for the EU to fully prepare to face large-scale cyberattacks.

The Council Conclusions of May 2022 on the cyber posture highlighted the need to address gaps in terms of response and preparedness to cyber-attacks, by calling for the Commission to present a proposal on a new Emergency Response Fund for Cybersecurity.

2. The purpose of this proposal is to strengthen the competitive position of industry and service sectors and support their digital transformation. The proposal aims at increasing the resilience of citizens, businesses and entities operating in critical and highly critical sectors against the growing cybersecurity threats with societal and economic impacts. The legal basis is therefore Article 173 TFEU on industry competitiveness as well as Article 322 (1) point (a) TFEU on carry-over rules derogating from the principle of budget annuality. The latter legal basis is necessary in relation to the Cybersecurity Emergency Mechanism. Other objectives of this Regulation are: to strengthen common EU detection and situational awareness of cyber threats and incidents; to reinforce preparedness of critical entities across the EU and strengthen solidarity by developing common response capacities against significant or large-scale cybersecurity incidents, including by making incident response support available for third countries; to enhance Union resilience and contribute to effective response by reviewing and assessing significant or large-scale incidents.
3. In particular, the proposal lays down:
  - The deployment of a pan-European infrastructure of Security Operation Centers (SOCs) (European Cyber Shield) to build and enhance common detection and situational awareness capabilities.
  - The creation of a Cyber Emergency Mechanism to support Member States in preparing for, responding to and immediate recovery from significant and large-scale cybersecurity incidents.
  - The establishment of a European Cybersecurity Incident Review Mechanism to review and assess specific significant or large-scale incidents.

## II. STATE OF PLAY OF WORK WITHIN THE COUNCIL PREPARATORY BODIES

4. Under Swedish Presidency the Commission presented the text at the meeting of the Horizontal Working Party on Cyber Issues (HWPCI) on 24 April 2023, and then had thematic presentations on 24 May and 7 June 2023.
5. The Spanish Presidency organised a total of fourteen dedicated HWPCI meetings which resulted in four compromise proposals covering the whole text of the Regulation. On 5 December 2023, the Council took note of the progress made under the Spanish Presidency (15392/23).
6. On 15 December 2023 the Presidency issued a draft mandate which was discussed in the HWPCI on 18 December 2023. In general delegations welcomed this compromise and agreed to submit this proposal, with some further amendments, to the Permanent Representatives Committee in order to receive a mandate to start the negotiations with the European Parliament. On 20 December 2023 the COREPER discussed and approved the mandate to start negotiations with the European Parliament<sup>1</sup>. A first trilogue was held in the European Parliament on 13 February 2024. The Belgian Presidency and the European Parliament had 16 technical meetings until 22 February 2024.
7. In the European Parliament, the file was assigned to the Committee on Industry, Research and Energy (ITRE) and MEP Lina Gálvez Muñoz (Group of the Progressive Alliance of Socialists and Democrats, Spain) has been appointed as rapporteur. The adoption of the report in ITRE was on 7 December 2023 and the decision to start the negotiations with the Council was taken in the Plenary on 11 December 2023.

---

<sup>1</sup> 19669/23

8. The opinion on the Cyber Solidarity Act was adopted by the European Economic and Social Committee on 13 July 2023<sup>2</sup> and the European Court of Auditors on 5 October 2023<sup>3</sup>. The European Committee of the Regions (CoR) adopted its opinion on 30 November<sup>4</sup>.
9. The purpose of this note is to obtain an orientation from COREPER with a view to negotiating and reaching a political agreement with the Parliament at the upcoming trilogue. The Presidency wishes to highlight the following major issues:

a) **Budget**

Article 19 (lines 210-211 a- d, 213)

The provisions introduced by the Commission's proposal to amend the Digital Europe Programme (DEP) are not convincing to the European Parliament. For the Parliament, a more cautious approach is preferred in deciding the reallocation of funds under the programme for the purpose of financing initiatives of the Cyber Solidarity Act as well as a cap for the Cybersecurity Reserve. The Council aims at preserving the mandate on amounts and transfers as much as possible. The Presidency will defend the idea that a cap for the Reserve should not be introduced in the text given the unpredictability of the circumstances as well as not to preempt the negotiations on the future multiannual financial framework. Finally, the Presidency will show flexibility on the annuality derogation for the parts of the Cyber Emergency Mechanism that are not part of the EU Cybersecurity Reserve.

---

<sup>2</sup> 12041/23

<sup>3</sup> 13841/23

<sup>4</sup> 16649/23

**b) Implementing/delegated acts**

Article 6 (105), Article 7(2) (line 109), Article 8(3) (line 113), Article 12(8) (line 136), Article 13(7) (line 147), and Article 20a (lines 232 i-o)

The European Parliament wishes to introduce four delegated and one implementing act in this legislative proposal. As the Council mandate had only an implementing act in article 12(8) the Presidency will maintain a reticent position on adding further empowerments. In view of a compromise, it will show flexibility on the articles linked to the Cybersecurity Reserve and where it is possible to have very precise and targeted empowerments.

c) **Information sharing with the Commission in the Cybersecurity Alert System**

Article 7 (1) (line 108)

The Council mandate established that relevant information as well as early warning obtained by the Cross-Border Hubs and related to a potential or ongoing large-scale cybersecurity incident shall be provided to the CSIRTs<sup>5</sup> Network and EU-CyCLONe<sup>6</sup> without undue delay in view of their respective crisis management roles in accordance with the NIS2 Directive. The Commission would thus receive this information via EU-CyCLONe. The European Parliament supports the Commission proposal that this information should be shared not only with EU-CyCLONe and the CSIRTs network, but also directly to the Commission. This is said to be justified by the Commission's other obligations in the framework of IPCR and other emergency instruments. In general, both the Council and the European Parliament stand for the principle of non-duplication of existing structures. Moreover, it is unclear why only the Commission, and not the Member States, should receive information directly. The Presidency will therefore defend the Council mandate.

<sup>6</sup> European Cyber Crises Liaison Organisation Network

**d) Role of the Commission in operation and administration of the EU Cybersecurity**

**Reserve**

Article 12 (6) (line 134) and Article 14 (2) (be) (line 155b)

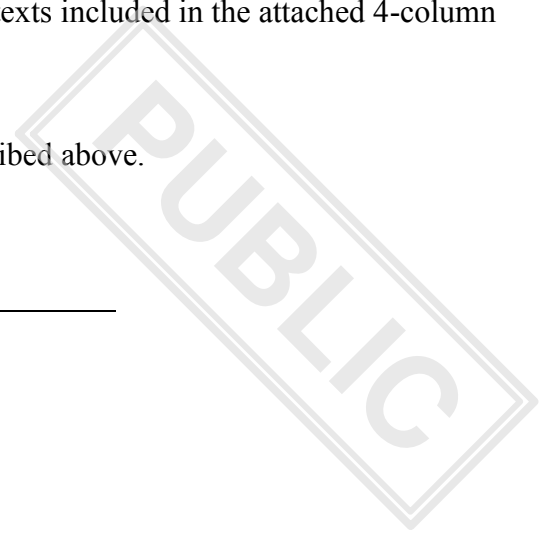

There are two issues here. First, the European Parliament and the Council agree that ENISA should be entrusted with the operational and administrative management of the Cybersecurity Reserve for users from Member States and EU institutions, bodies and agencies. The Presidency will show flexibility on the specific approach to achieve this, as long as that approach is legally sound. Second, the Commission deems it necessary to receive all requests to use the Reserve, including from Member States and EUIBAs, at the same time as ENISA. Indeed, the Commission will manage the Reserve for third-country users and will also have a role in the joint assessment in case of multiple requests. The Council mandate, however, specifies that all the requests have to be addressed to the “contracting authority”, which following entrustment will be ENISA in most cases. Those requests may include sensitive information which should be treated on a strict need-to-know basis. The Presidency will continue to defend the Council mandate, with the ambition to ensure that only relevant information for the use of the Reserve is shared and on a need-to-know basis.

10. Furthermore, the Presidency brings to the attention of Member States that a provisional agreement was reached at technical level on a number of important issues such as terminology (the Council terminology of National Cyber Hub, Cross-Border Cyber Hub and EU Cybersecurity Alert System has been accepted, in lieu of, respectively, National SOC, Cross-Border SOCs and Cyber Shield); and prioritisation.
11. The Presidency invites delegations to focus on finding compromises regarding the major topics mentioned above, as well as on a number of other issues, which are likely to be part of the final agreement.

**III. CONCLUSION**

12. The Permanent Representatives Committee is invited to:
  - approve the provisional agreement reached at technical level, as set out in the Annex (marked in green);

- give a mandate to the Presidency to continue negotiations with the European Parliament, on the basis of the compromise texts included in the attached 4-column table;
  - show flexibility regarding some issues described above.
-
