WORKING DOCUMENT

From:	General Secretariat of the Council
To:	Delegations
Subject:	Proposal for a Directive of the European Parliament and of the Council amending Council Directive 96/53/EC laying down for certain road vehicles circulating within the Community the maximum authorised dimensions in national and international traffic and the maximum authorised weights in international traffic - Four-column document

In view of the Land Transport working party on 5 May 2026, delegations will find, attached, an updated 4-column document. This document contains the text for those lines that have been provisionally agreed in the 6 ITM's that have taken place so far and additional presidency compromise proposals. This should allow the Presidency to prepare for a trilogue that is scheduled for 11 June 2026.

Only after the 5th and 6th ITM there were lines that were provisionally agreed.

During the 5th ITM:
- Recitals: line 21
- Articles: lines 49a, 49b, 60, 134, 155,

During the 6th ITM:
- Recitals: line 24
- Articles: lines 82, 83, 103b, 130, 131, 150, 196, 196a

The Presidency has discussed the Annex of the Directive with the EP but has not yet developed any compromise in this Annex.

To prepare for the trilogue, where it is the intention to provisionally agree on the work done so far and conclude on the issues related to permits for indivisible loads, the one-stop-shop, an EU platform, an EU label and on the use of EMS, the Presidency has prepared compromise proposals.

- **Indivisible loads, the one-stop-shops and the EU platform**

Article 4 [lines 78-80 + recital 8, line 18]: Presidency would like to present language to finalise these lines with the EP. For line 80 it is too early.

Article 4a [lines 102a-104 + recital 11, line 21]: Presidency understands that the language presented in line 103a is better articulated and can replace line102a. Other restrictions should be reported in the digital platform according to the rules under the ITS Directive and announced via the national access points. For line 103c, the general idea is to ask the Commission to create a platform that brings all the 27 one-stop-shops together.

- **EU label**

Article 10ca [lines 146c-146e + recital 16a]: Presidency is proposing a text that introduces a general obligation to display an EU label for vehicles in international traffic that are longer than 18,75m. In the recital, it would be mentioned that Member States are encouraged to consider using the same label for vehicles in national transport.

- **EMS**

Article 4 [lines 85a, 89-91, 93-94]: Presidency would like to propose a compromise, where it is suggested to limit the pre-assessment to an infrastructure check. The monitoring system for the trials would also be reinserted, with a reference to the performance indicators.

The Presidency would like to share the concept of these performance indicators:

- Road safety: Number of accidents per year (resulting in dead or seriously injured) where any HDV is involved and where EMS are involved.
- Sustainability:
    - Vkm performed by vehicles registered in a given MS (already provided and available in Eurostat)
    - Number of permits for EMS issued per year.

These two KPIs should show whether EMS reduce the number of trips.

- Modal cooperation:
    - tkm of freight transport performed by road, rail and IWW/maritime (already provided and available in Eurostat/Statistical Pocketbook)

PUBLIC

- modal shift potential: it is an indicator already elaborated by Eurostat. It relates the transport of containers over longer distances (more than 300 kilometres) to total road Intermodal Transport Unit (ITU) transport and to total road goods transport, providing information for analysis of the potential for transferring such long-distance transport of containers from road to other modes of transport (Modal shift potential of long-distance road freight in containers - tonne-kilometre).

- **Crisis situations**

Article 10k [lines 194-195a]: the Presidency has taken inspiration from recently agreed language in the Driving Licence Directive.

11	(1) Council Directive 96/53/EC[1], sets out the maximum permitted weights and dimensions of heavy-duty vehicles that can circulate on the Union's roads in order to ensure road safety and the smooth functioning of the internal market as well as foster the energy and operational efficiency of transport operations and reducing greenhouse gas emissions from those operations. The evaluation of Directive 96/53/EC has shown that it has only partially been effective in achieving its road safety, internal market and environmental objectives, and there is a need to adapt its provisions to reflect the technological developments and promote innovation, address the changing transport market challenges and contribute to the Union's policy priorities of decarbonisation of transport. _____ 1. Recital 6a				
16a		***(6a) This Directive is intended to improve the competitiveness of the road transport sector by promoting more cost-efficient and sustainable transport operations as well as encouraging intermodality. Although the new provisions will translate into a reduction in the vehicle-kilometres driven, the acute shortage of drivers in the Union is expected to persist. In order to address this shortage, it is fundamental to urgently improve the working conditions for drivers of heavy duty vehicles. The lack of quality truck parking areas in the Union adds to the deterioration of the working conditions of truck drivers, which is especially a problem during long-distance journeys. In order to address this situation and enhance the attractiveness of the sector, the increased dimensions***

25	(15) Heavy-duty vehicles with elongated cabs have started making their entrance on the market, paired with zero-emission propulsion systems. Using zero-emission propulsion systems requires, depending on the technology, extra space which should not be counted at the expense of the effective load of the vehicle, so that the zero-emission road transport sector is not penalised in economic terms. It should thus be clarified that the excess in the maximum lengths provided for the elongated cabs can be such that it provides space needed for accommodating zero-emission technology, such as batteries and hydrogen tanks, provided that the safety, efficiency and comfort features of aerodynamic cabs are not jeopardized.	(15) Heavy-duty vehicles with elongated cabs have started making their entrance on the market, paired with zero-emission propulsion systems. Using zero-emission propulsion systems requires, depending on the technology, extra space which should not be counted at the expense of the effective load of the vehicle, so that the zero-emission road transport sector is not penalised in economic terms. It should thus be clarified that the excess in the maximum lengths provided for the elongated cabs can be such that it provides space needed for accommodating zero-emission technology, such as batteries and hydrogen tanks, provided that the safety, efficiency and comfort features of aerodynamic cabs are not jeopardized, ***and that the vehicle concerned complies with the "turning circle rule"***.	(15) Heavy-duty vehicles with elongated cabs have started making their entrance on the market, paired with zero-emission propulsion systems. 26	(16) Similarly to the need for extra space, current standards are also not suitable to compensate for the extra weight of zero-emission heavy-duty vehicles, in particular in long distance transport. Additional weight and axle weight are necessary for zero-emission vehicle combinations, as well as to the most common passenger vehicles in use in the Union. Lighter technologies and better aerodynamics will render the use of zero-emission propulsion systems more efficient (for example, to allow for longer range travelled and longer battery life) by reducing their energy consumption. To provide additional incentives to the deployment of zero-emission heavy-duty vehicles, to promote technological development, as well as the equipment of vehicles with improved aerodynamics, extra weight allowances should therefore be disconnected from the weight of the zero-emission technology.	(16) Similarly to the need for extra space, current standards are also not suitable to compensate for the extra weight of zero-emission heavy-duty vehicles, in particular in long distance transport. Commission Proposal Table 1

PUBLIC

1. Maximum authorised dimensions for the vehicles referred to in Article 1(1), point (a)	
1.1 Maximum length	
— motor vehicle other than a bus	12,00 m
— trailer	12,00 m
— articulated vehicle	16,50 m
— road train	18,75 m
— articulated bus	18,75 m
— bus with two axles	13,50 m
— bus with more than two axles	15,00 m
— bus + trailer	18,75 m
1.2 Maximum width:	
(a) all vehicles except vehicles referred to in point (b)	2,55 m
(b) superstructures of conditioned vehicles or conditioned containers or swap bodies transported by vehicles	2,60 m
1.3 Maximum height	
— any vehicle	4,00 m
— vehicles or vehicle combinations carrying in intermodal transport one or more containers with a standard external height of 9’ 6’’ (high-cube containers)	4,30 m
1.4 Removable superstructures and standardised freight items such as containers are included in the dimensions specified in points 1.1, 1.2, 1.3, 1.6, 1.7, 1.8 and 4.4.	
1.4a If any removable attachments such as ski-boxes are fitted to a bus, its length, including the attachments, must not exceed the maximum length laid down in point 1.1.	
1.5 Any motor vehicle or vehicle combination which is in motion must be able to turn within a swept circle having an outer radius of 12,50 m and an inner radius of 5,30 m	
1.5a Additional requirements for buses	

With the vehicle stationary, a vertical plane tangential to the side of the vehicle and facing outwards from the circle shall be established by marking a line on the ground. In the case of an articulated vehicle, the two rigid portions shall be aligned with the plane.			
When the vehicle moves from a straight line approach into the circular area described in point 1.5, no part of it shall move outside of that vertical plane by more than 0,60 m			
1.6 Maximum distance between the axis of the fifth-wheel king pin and the rear of a semi-trailer.			12,00 m
1.7 Maximum distance measured parallel to the longitudinal axis of the road train from the foremost external point of the loading area behind the cabin to the rearmost external point of the trailer of the combination, minus the distance between the rear of the drawing vehicle and the front of the trailer.			15,65 m
1.8 Maximum distance measured parallel to the longitudinal axis of the road train from the foremost external point of the loading area behind the cabin to the rearmost external point of the trailer of the combination.			16,40 m
2. Maximum authorised vehicle weight			
2.1 Vehicles forming part of a vehicle combination			
2.1.1	Two-axle trailer		18 tonnes
2.1.2	Three-axle trailer		24 tonnes
2.2 Vehicle combinations			
2.2.1	Road trains with five or six axles		
	(a) two-axle motor vehicle with three-axle trailer		40 tonnes
	(b) three-axle motor vehicle with two or three-axle trailer		40 tonnes
2.2.2	Articulated vehicles with five or six axles		
	(a)	two-axle motor vehicle with three-axle semi-trailer	40 tonnes
	(b)	three-axle motor vehicle with two or three-axle semi-trailer	40 tonnes
	(c)	two-axle motor vehicle with three-axle semi-trailer involved in intermodal transport operations	42 tonnes
	(d)	three-axle motor vehicle with two- or three-axle semi-trailer involved in intermodal transport operations	44 tonnes
2.2.3	Road trains with four axles consisting of a two-axle motor vehicle and a two-axle trailer		36 tonnes
2.2.4	Articulated vehicles with four axles consisting of a two-axle motor vehicle and a two-axle semi-trailer, if the distance between the axles of the semi-trailer:		
	2.2.4.1	is 1,3 m or greater but not more than 1,8 m	36 tonnes

		is greater than 1,8 m	36 tonnes
	2.2.4.2	In case the maximum authorised weight (MAW) of the motor vehicle (18 tonnes) and the MAW of the tandem axle of the semi-trailer (20 tonnes) are respected and the driving axle is fitted with twin tyres and air suspension or suspension recognised as being equivalent within the Union as defined in Annex II the maximum authorised weight provided for in point 2.2.4.2 shall be increased by 2 tonnes.	
In the case of vehicle combinations including alternatively fuelled vehicles other than zero-emission vehicles, the maximum authorised weights provided for in Sub-section 2.2 shall be increased by the additional weight of the alternative fuel technology with a maximum of 1 tonne.			
In the case of vehicle combinations including zero-emission vehicles the maximum authorised weights provided for in Sub-section 2.2.1 and 2.2.2 shall be increased by 4 tonnes.			
In the case of vehicle combinations including zero-emission vehicles the maximum authorised weights provided for in in Sub-section 2.2.3 and 2.2.4 shall be increased by 2 tonnes.			
2.3 Motor vehicles			
2.3.1		Two-axle motor vehicles other than buses:	18 tonnes
2.3.2		two-axle buses:	19,5 tonnes
2.3.3		Three-axle motor vehicles:	25 tonnes
2.3.4		Three-axle motor vehicles where the driving axle is fitted with twin tyres and air suspension or suspension recognised as being equivalent within the Union as defined in Annex II, or where each driving axle is fitted with twin tyres and the maximum weight of each axle does not exceed 9,5 tonnes.	26 tonnes
2.3.5		Four-axle motor vehicles with two steering axles where the driving axle is fitted with twin tyres and air suspension or suspension recognized as being equivalent within the Union as defined in Annex II, or where each driving axle is fitted with twin tyres and the maximum weight of each axle does not exceed 9,5 tonnes	32 tonnes
2.3.6		Five-axle motor vehicles with two steering axles where the driving axle is fitted with twin tyres and air suspension or suspension recognized as being equivalent within the Union as defined in Annex II, or where each driving axle is fitted with twin tyres and the maximum weight of each axle does not exceed 9,5 tonnes.	40 tonnes
In the case of alternatively fuelled vehicles other than zero-emission vehicles, the maximum authorised weights provided for in points 2.3.1, 2.3.3 and 2.3.4 of Sub-section 2.3 shall be increased by the additional weight of the alternative fuel technology with a maximum of 1 tonne.			
In the case of zero-emission vehicles, the maximum authorised weights provided for in Sub-section 2.3 shall be increased by 2 tonnes.			
2.4 Three-axle articulated buses			28 tonnes

In the case of alternatively fuelled vehicles other than zero-emission vehicles, the maximum authorised weight of 28 tonnes provided for in Sub-section 2.4 is increased by the additional weight required for the alternative fuel technology with a maximum of 1 tonne.		
In the case of zero-emission vehicles the maximum authorised weight of 28 tonnes provided for in Sub-section 2.4 is increased by 2 tonnes		
3 Maximum authorised axle weight of the vehicles referred to in Article 1 (1), point (b)		
3.1 Single axles		
Single non-driving axle		10 tonnes
3.2 Tandem axles of trailers and semi-trailers		
The sum of the axle weights per tandem axle must not exceed, if the distance (d) between the axles is:		
3.2.1	less than 1 m (d < 1,0)	11 tonnes
3.2.2	between 1,0 m and less than 1,3 m (1,0 ≤ d < 1,3)	16 tonnes
3.2.3	between 1,3 m and less than 1,8 m (1,3 ≤ d < 1,8)	18 tonnes
3.2.4	1,8 m or more (1,8 ≤ d)	20 tonnes
3.3 Tri-axles of trailers and semi-trailers		
The sum of the axle weights per tri-axle must not exceed, if the distance (d) between the axles is:		
3.3.1	1,3 m or less (d ≤ 1,3)	21 tonnes
3.3.2	over 1,3 m and up to 1,4 m (1,3	24 tonnes
3.4 Driving axle		
3.4.1	Driving axle of the vehicles referred to in points 2.2, 2.3 and 2.4 other than zero-emission vehicles	11,5 tonnes
3.4.2	Driving axle of zero-emission vehicles referred to in points 2.2.1 and 2.2.2	12.5 tonnes
3.4.3	Zero-emission two-axle buses	12.5 tonnes
3.5 Tandem axles of motor vehicles		
The sum of the axle weights per tandem axle must not exceed, if the distance (d) between the axles is:		
3.5.1	less than 1 m (d < 1,0)	11,5 tonnes

PUBLIC

3.5.2	1,0 m or greater but less than 1,3 m (1,0 ≤ d < 1,3)	16 tonnes
3.5.3	1,3 m or greater but less than 1,8 m (1,3 ≤ d < 1,8)	18 tonnes
	Where the driving axle is fitted with twin tyres and air suspension or suspension recognised as being equivalent within the Union as defined in Annex II, or where each driving axle is fitted with twin tyres and where the maximum weight for each axle does not exceed 9,5 tonnes	19 tonnes
4. Related characteristics of the vehicles referred to in Article 1(1), point (b)		
4.1 All vehicles		
The weight borne by the driving axle or driving axles of a vehicle or vehicle combination must not be less than 25 % of the total laden weight of the vehicle or vehicle combination, when used in international traffic		
4.2 Road trains		
The distance between the rear axle of a motor vehicle and the front axle of a trailer must not be less than 3,00 m		
4.3 Maximum authorised weight depending on the wheelbase		
The maximum authorised weight in tonnes of a four-axle motor vehicle may not exceed five times the distance in metres between the axles of the foremost and rearmost axles of the vehicle		
4.4 Semi-trailers		
The distance measured horizontally between the axis of the fifth-wheel king pin and any point at the front of the semi-trailer must not exceed 2,04 m		

PUBLIC

EP Mandate Table 1

1. Maximum authorised dimensions for the vehicles referred to in Article 1(1), point (a)	
1.1 Maximum length	
— motor vehicle other than a bus	12,00 m
— trailer	12,00 m
— articulated vehicle	16,50 m
— road train	18,75 m
— articulated bus ***with three axles***	18,75 m
— articulated bus with four axles	***21,00 m***
— bus with two axles	13,50 m
— bus with more than two axles	15,00 m
— bus + trailer	18,75 m
1.2 Maximum width:	
(a) all vehicles except vehicles referred to in point (b)	2,55 m
(b) superstructures of conditioned vehicles or conditioned containers or swap bodies transported by vehicles	2,60 m
1.3 Maximum height	
— any vehicle	4,00 m
— vehicles or vehicle combinations carrying in intermodal transport one or more containers with a standard external height of 9’ 6’’ (high-cube containers)	4,30 m
1.4 Removable superstructures and standardised freight items such as containers are included in the dimensions specified in points 1.1, 1.2, 1.3, 1.6, 1.7, 1.8 and 4.4.	
1.4a If any removable attachments such as ski-boxes are fitted to a bus, its length, including the attachments, must not exceed the maximum length laid down in point 1.1.	
1.5 Any motor vehicle or vehicle combination which is in motion must be able to turn within a swept circle having an outer radius of 12,50 m and an inner radius of 5,30 m	

PUBLIC

1.5a Additional requirements for buses			
	With the vehicle stationary, a vertical plane tangential to the side of the vehicle and facing outwards from the circle shall be established by marking a line on the ground. In the case of an articulated vehicle, the two rigid portions shall be aligned with the plane.		
	When the vehicle moves from a straight line approach into the circular area described in point 1.5, no part of it shall move outside of that vertical plane by more than 0,60 m		
1.6 Maximum distance between the axis of the fifth-wheel king pin and the rear of a semi-trailer.			12,00 m
1.7 Maximum distance measured parallel to the longitudinal axis of the road train from the foremost external point of the loading area behind the cabin to the rearmost external point of the trailer of the combination, minus the distance between the rear of the drawing vehicle and the front of the trailer.			15,65 m
1.8 Maximum distance measured parallel to the longitudinal axis of the road train from the foremost external point of the loading area behind the cabin to the rearmost external point of the trailer of the combination.			16,40 m
2. Maximum authorised vehicle weight			
2.1 Vehicles forming part of a vehicle combination			
2.1.1	Two-axle trailer		18 tonnes
2.1.2	Three-axle trailer		24 tonnes
2.2 Vehicle combinations			
2.2.1	Road trains with five or six axles		
	(a) two-axle motor vehicle with three-axle trailer		40 tonnes
	(b) three-axle motor vehicle with two or three-axle trailer		40 tonnes
2.2.2	Articulated vehicles with five or six axles		
	(a)	two-axle motor vehicle with three-axle semi-trailer	40 tonnes
	(b)	three-axle motor vehicle with two or three-axle semi-trailer	40 tonnes
	(c)	two-axle motor vehicle with three-axle semi-trailer involved in intermodal transport operations	~~42~~44 tonnes
	(d)	three-axle motor vehicle with two- or three-axle semi-trailer involved in intermodal transport operations	44 tonnes
2.2.3	Road trains with four axles consisting of a two-axle motor vehicle and a two-axle trailer		36 tonnes
2.2.4	Articulated vehicles with four axles consisting of a two-axle motor vehicle and a two-axle semi-trailer, if the distance between the axles of the semi-trailer:		

PUBLIC

	2.2.4.1	is 1,3 m or greater but not more than 1,8 m	36 tonnes
	2.2.4.2	is greater than 1,8 m	36 tonnes
		In case the maximum authorised weight (MAW) of the motor vehicle (18 tonnes) and the MAW of the tandem axle of the semi-trailer (20 tonnes) are respected and the driving axle is fitted with twin tyres and air suspension or suspension recognised as being equivalent within the Union as defined in Annex II the maximum authorised weight provided for in point 2.2.4.2 shall be increased by 2 tonnes.	
In the case of vehicle combinations including alternatively fuelled ***motor*** vehicles other than zero-emission ***motor*** vehicles, the maximum authorised weights provided for in Sub-section 2.2 shall be increased by the additional weight of the alternative fuel technology with a maximum of 1 tonne.			
In the case of vehicle combinations including zero-emission ***motor*** vehicles the maximum authorised weights provided for in Sub-section 2.2.1 and 2.2.2 shall be increased by 4 tonnes.			
In the case of vehicle combinations including zero-emission ***motor*** vehicles the maximum authorised weights provided for in in Sub-section 2.2.3 and 2.2.4 shall be increased by 2 tonnes.			
In the case of vehicle combinations including trailers or semi-trailers with zero-emission technology the maximum authorised weights provided for in Sub-section 2.21, 2.2.2,2.2.3 and 2.2.4 shall be increased by 2 tonnes.			
When more than one of the increases for vehicle combinations set out above apply to a single vehicle combination, those increases shall apply cumulatively			
2.3 Motor vehicles			
2.3.1	Two-axle motor vehicles other than buses:		18 tonnes
2.3.2	two-axle buses:		19,5 tonnes
2.3.3	Three-axle motor vehicles:		25 tonnes
2.3.4	Three-axle motor vehicles where the driving axle is fitted with twin tyres and air suspension or suspension recognised as being equivalent within the Union as defined in Annex II, or where each driving axle is fitted with twin tyres and the maximum weight of each axle does not exceed 9,5 tonnes.		26 tonnes
2.3.5	Four-axle motor vehicles with two steering axles where the driving axle is fitted with twin tyres and air suspension or suspension recognized as being equivalent within the Union as defined in Annex II, or where each driving axle is fitted with twin tyres and the maximum weight of each axle does not exceed 9,5 tonnes		32 tonnes

2.3.6	Five-axle motor vehicles with two steering axles where the driving axle is fitted with twin tyres and air suspension or suspension recognized as being equivalent within the Union as defined in Annex II, or where each driving axle is fitted with twin tyres and the maximum weight of each axle does not exceed 9,5 tonnes.	40 tonnes
In the case of alternatively fuelled ***motor*** vehicles other than zero-emission ***motor*** vehicles, the maximum authorised weights provided for in points 2.3.1, 2.3.3 and 2.3.4 of Sub-section 2.3 shall be increased by the additional weight of the alternative fuel technology with a maximum of 1 tonne.		
In the case of zero-emission ***motor*** vehicles, the maximum authorised weights provided for in Sub-section 2.3 shall be increased by 2 tonnes.		
2.4 Three-axle articulated buses		28 tonnes
2.5 Four-axle articulated buses		***32 tonnes***
In the case of alternatively fuelled ***motor*** vehicles other than zero-emission ***motor*** vehicles, the maximum authorised ~~*weight of 28 tonnes*~~***weights*** provided for in ~~*Sub-section 2.4 is*~~***Sub-sections 2.4 and 2.5 are*** increased by the additional weight required for the alternative fuel technology with a maximum of 1 tonne.		
In the case of zero-emission ***motor*** vehicles the maximum authorised ~~*weight of 28 tonnes*~~ ***weights*** provided for in ~~*Sub-section 2.4 is*~~***Sub-sections 2.4 and 2.5 are*** increased by 2 tonnes		
3 Maximum authorised axle weight of the vehicles referred to in Article 1 (1), point (b)		
3.1 Single axles		
Single non-driving axle		10 tonnes
3.2 Tandem axles of trailers and semi-trailers		
The sum of the axle weights per tandem axle must not exceed, if the distance (d) between the axles is:		
3.2.1	less than 1 m (d < 1,0)	11 tonnes
3.2.2	between 1,0 m and less than 1,3 m (1,0 ≤ d < 1,3)	16 tonnes
3.2.3	between 1,3 m and less than 1,8 m (1,3 ≤ d < 1,8)	18 tonnes
3.2.4	1,8 m or more (1,8 ≤ d)	20 tonnes
3.3 Tri-axles of trailers and semi-trailers		
The sum of the axle weights per tri-axle must not exceed, if the distance (d) between the axles is:		
3.3.1	1,3 m or less (d ≤ 1,3)	21 tonnes
3.3.2	over 1,3 m and up to 1,4 m (1,3	24 tonnes
3.4 Driving axle		

3.4.1	Driving axle of the vehicles referred to in points 2.2, 2.3 and 2.4 other than zero-emission vehicles	11,5 tonnes
3.4.2	Driving axle of zero-emission vehicles referred to in points 2.2.1 and 2.2.2	12.5 tonnes
3.4.3	Zero-emission two-axle buses	12.5 tonnes
3.4.4	***Zero-emission three-axle buses***	***12.5 tonnes***
3.5 Tandem axles of motor vehicles		
The sum of the axle weights per tandem axle must not exceed, if the distance (d) between the axles is:		
3.5.1	less than 1 m (d < 1,0)	11,5 tonnes
3.5.2	1,0 m or greater but less than 1,3 m (1,0 ≤ d < 1,3)	16 tonnes
3.5.3	1,3 m or greater but less than 1,8 m (1,3 ≤ d < 1,8)	18 tonnes
	Where the driving axle is fitted with twin tyres and air suspension or suspension recognised as being equivalent within the Union as defined in Annex II, or where each driving axle is fitted with twin tyres and where the maximum weight for each axle does not exceed 9,5 tonnes***. In case of zero-emission motor vehicles, the maximum sum of the axle weights per tandem axle shall be increased by 1 tonne.***	19 tonnes
3.6 Tri-axles of motor vehicles		
The sum of the axle weights per tri-axles must not exceed, if the distance (d) between the axles is:		
3.6.1	***less than 1,3 m(d<1,3)***	***21 tonnes***
3.6.2	***1,3 m or greater but less than1,8 m (1,3 ≤ d < 1,8)***	***24 tonnes***
4. Related characteristics of the vehicles referred to in Article 1(1), point (b)		
4.1 All vehicles		
The weight borne by the driving axle or driving axles of a vehicle or vehicle combination must not be less than 25 % of the total laden weight of the vehicle or vehicle combination, when used in international traffic		
4.2 Road trains		
The distance between the rear axle of a motor vehicle and the front axle of a trailer must not be less than 3,00 m		
4.3 Maximum authorised weight depending on the wheelbase

3.5.1	less than 1 m (d < ~~1,0~~) **1)**	11,5 tonnes
3.5.2	~~1,0 m~~**equal to** or greater ~~but~~**than 1 m and** less than ~~1,3 m (1,0~~**1,30 m (1** ≤ d < ~~1,3~~**1,30**)	16 tonnes
3.5.3	~~1,3 m~~**equal to** or greater ~~but~~**than 1,30 m and** less than ~~1,8 m~~ **1,80 m** (~~1,3~~**1,30** ≤ d < ~~1,8~~**1,80**)	18 tonnes
	Where the driving axle is fitted with twin tyres and air suspension or suspension recognised as being equivalent within the Union as defined in Annex II, or where each driving axle is fitted with twin tyres and where the maximum weight for each axle does not exceed ~~9,5~~**9,50** tonnes**.**	19 tonnes
3.6 Tridem axles of motor vehicles		
The sum of the axle weights per tridem axle must not exceed, if the distance (d) between the axles is:		
3.6.1	**less than 1,30 m (d < 1,30)**	**21 tonnes**
3.6.2	**equal to or greater than 1,30 m and less than 1,40 m (1,30 ≤ d < 1,40)**	**24 tonnes**
4. Related characteristics of the vehicles referred to in Article 1(1), point (b)		
4.1 All vehicles		
The weight borne by the driving axle or driving axles of a vehicle or vehicle combination must not be less than 25 % of the total laden weight of the vehicle or vehicle combination, when used in international traffic**.**		
4.2 Road trains		
The distance between the rear axle of a motor vehicle and the front axle of a trailer must not be less than 3,00 m**.**		
4.3 Maximum authorised weight depending on the wheelbase		
The maximum authorised weight in tonnes of a four-axle motor vehicle may not exceed five times the distance in metres between the axles of the foremost and rearmost axles of the vehicle		

PUBLIC

	The maximum authorised weight in tonnes of a motor vehicle with five axles may not exceed four times the distance in metres between the axles of the foremost and rearmost axles of the vehicle, in case the weight exceeds 32 tonnes.
	If the maximum authorised weight of a vehicle combination, as specified in sub-section 2.2, exceeds 42 tonnes, it must not exceed the weight calculated using the following formula: Weight in tonnes ≤ 2,7 x A + 13,5, where A is the distance in metres between the axles of the foremost and rearmost axles of the vehicle combination.
4.4 Semi-trailers	
	The distance measured horizontally between the axis of the fifth-wheel king pin and any point at the front of the semi-trailer must not exceed 2,04 m**.**
