to the

COMMUNICATION FROM THE COMMISSION TO THE EUROPEAN PARLIAMENT, THE COUNCIL, THE EUROPEAN ECONOMIC AND SOCIAL COMMITTEE AND THE COMMITTEE OF THE REGIONS

Pathway to a Healthy Planet for All EU Action Plan: 'Towards Zero Pollution for Air, Water and Soil'

{SWD(2021) 140 final} - {SWD(2021) 141 final}

ANNEX 1 - LIST OF ACTIONS

N°	ACTIONS	Timetable
	IMPROVING OUR HEALTH AND WELL-BEING	
	Reducing health inequalities through zero pollution	
Flagship 1	Regularly feed pollution monitoring and outlook data into the	as from 2022
6 °1	Cancer Inequalities Registry and the Atlas of Demographys.	
	Supporting urban zero pollution action	
	As part of the future Year of Greener Cities, in synergy with the	
	proposed Horizon Europe Mission for Climate Neutral and	as from 2022
Flagship 2	Smart Cities, the revision of the Urban Mobility Package, the	
0	Covenant of Mayors, and the New European Bauhaus initiative,	
	identify key urban greening and innovation needs to prevent	
	pollution, including indoors.	
1	Revise the Ambient Air Quality Directives	2022
2	Introduce more stringent emission limits for motor vehicles	2021
2	(Euro 7)	2021
	Reduce air and noise emissions from transport at source by	
3	updating, where relevant, EU or international regulatory	as from 2021
	frameworks	
4	Implementation Report on the Environmental Noise Directive	2022
5	Follow up of the evaluation of the Outdoor Noise Directive	2022/2023
6	Assess pathways and policy options to improve indoor air	2023
	quality, and propose legislative measure as relevant	
7	Review and, if necessary, revise the Bathing Water Directive	2021-2023
8	Support the implementation of the new Drinking Water	as from 2022
Ũ	Directive and adopt relevant implementing and delegated acts	u 5 Hom 2022
	Review and, if necessary, revise the Energy Efficiency	as from 2021
9	Directive, the Renewable Energy Directive and the eco-	
	design and energy labelling requirements for heating	
	appliances	
	LIVING WITHIN OUR PLANETARY BOUNDARIES	
	Promoting zero pollution across regions	
Flagship 3	In cooperation with the Committee of the Regions, present a	2024
01	Scoreboard of EU regions' green performance to measure, in particular, efforts to achieve pollution-relevant targets.	
	Revise the Environmental Quality Standards Directive and	
10	the Groundwater Directive	2022
	Review and, if necessary, revise the Marine Strategy	
11	Framework Directive	2021-2023
	Reduce underwater noise and marine litter through EU	
12	threshold values to be set under the Marine Strategy	2022
12	Framework Directive	
	Revise the Urban Waste Water Treatment Directive in	
13	synergy with the review of the Industrial Emissions Directive	2022
15	and the evaluation of the Sewage Sludge Directive	
14	Support the implementation of the Strategic Guidelines for a	2022-2023
	more sustainable and competitive EU aquaculture -	
	Environmental performance aspects	

	 establishing an EU priority watch list for soil contaminants and introducing a zero soil pollution module in the future LUCAS survey; investigating best practices and providing guidance for a passport for the safe, sustainable and circular use of excavated soil; facilitating and promoting awareness of public and private funding for identification, investigation, assessment and remediation of contaminated soils and groundwater. 	2024 2024
	TOWARDS ZERO POLLUTION FROM PRODUCTION AND CONSUMPTI	ON
Flagship 4	Facilitating zero pollution choices Encourage public and private sector operators to make 'zero pollution pledges' to promote best available, 'near-zerowaste' and least polluting options.	as from 2022
16	Revision of the Industrial Emissions Directive and the E- PRTR Regulation	2021/2022
17	Recommendations on the basis of a fitness check on the implementation of the polluter pays principle	2024
18	Revision of the Mercury Regulation	2022
19	Support international work on best available techniques (BAT), including new and emerging technologies, to reduce industrial emissions and on the revision of the Kiyv Protocol to improve public access to information on those emissions	as from 2021
	Ensuring stricter implementation and enforcement	
Flagship 5	Enforcing zero pollution together Bring together environmental and other enforcement authorities to kick off the exchange of best practices and encourage Member States to devise cross-sectorial compliance actions towards zero tolerance for pollution at national level and transboundary level.	as from 2022
20	Revise the Environmental Crime Directive	2021
20	Fitness check of the Environmental Liability Directive	2023
	BOOSTING CHANGE ACROSS SOCIETY FOR ZERO POLLUTION	2023
Flagship 6	Showcasing zero pollution solutions for buildings Showcase from the renovation wave strategy and New European Bauhaus initiative how building projects and the use of Local Digital Twins can contribute to zero pollution objectives.	as from 2022
Flagship 7	Living Labs for green digital solutions and smart zero pollution Launch Living Labs for green digital solutions and smart zero pollution to help develop local actions for green and digital transformation.	2021
22	Build capacity and improve knowledge on less polluting practices with national advisory services for farmers	as from 2023
23	Compile and make accessible in a digital format all main obligations on nutrient management stemming from EU law to limit the environmental footprint of farming activities	2023
	Create a zero pollution contribution to the European Green	2023

25 Create Destination Earth to develop a very high precision digital model of the Earth with Copernicus data as key building block to monitor the state of air, freshwaters, seas and soil as from 2024 25 Improved training and educational support on environmental risks including pharmaceuticals through as from 2024 26 tailored EU training modules for healthcare and other social care sector workers Guidelines for healthcare professionals on the prudent use of pharmaceuticals and support to include environmental aspects in training and professional development programmes as from 2021 26 Training and educational support for climate, environment, and health conscious professionals and economic operators. as from 2021 27 Advance international cooperation on black carbon policies to reduce climate change impacts and improve air quality as from 2021 28 Support global action on the export of end-of-life and used vehicles as from 2021 28 Support global action on the export of end-of-life and used vehicles as from 2021 29 Support global initiative to better monitor and manage international trade for waste electrical and electronic equipment (WEEE) and waste batteries as from 2021/2022 30 Support a global initiative to end informal recycling of used lead actio batteries as from 2021/2022 30 Consolidating EU's Knowledge Centres for Zero Pollution Consolidating EU's Knowledge Centres of Zero Pollution		Deal Dataspace to improve data availability	
25digital model of the Earth with Copernicus data as key building block to monitor the state of air, freshwaters, seas and soilas from 2024Improved training and educational support on environmental risks including pharmaceuticals through • tailored EU training modules for healthcare and other social care sector workers • Guidelines for healthcare professionals on the prudent use of pharmaceuticals and support to include environmental aspects in training and professional development programmes • Training and educational support for climate, environment, and health conscious professionals and economic operators.as from 2021PROMOTING WORLDWIDE CHANCE FOR ZERO POLLUTIONFlagship 8Minimising the EU's external pollution footprint Promote global zero pollution in all relevant international fora and work with the EU Member States and stakeholders.as from 202127Advance international cooperation on black carbon policies to reduce climate change impacts and improve air quality to reduce land trade for waste electrical and electronic equipment (WEEE) and waste batteriesas from 202129Support a global initiative to end informal recycling of used lead acid batteriesas from 2021/202230Support a global initiative to end informal recycling of used lead acid batteriesas from 2021/202231Zero Pollution Monitoring and Outlook Reportsas from 202132Develop a 'European Environment and Health Atlas'2023/202433Launch the Zero Pollution Stakeholder platform (including thematic hubs, e.g. on digital solutions, clean air tech, soil as from 2021as from 2021	25		
block to monitor the state of air, freshwaters, seas and soilImproved training and educational support on environmental risks including pharmaceuticals through• Guidelines for healthcare professionals on the prudent use of pharmaceuticals and support to include environment, and health conscious professionals and economic operators.• Training and educational support for climate, environment, and health conscious professionals and economic operators.• Training and educational support for climate, environment, and health conscious professionals and economic operators.• Training and educational support for climate, environment, and health conscious professionals and economic operators.• Advance international cooperation on black carbon policies to reduce climate change impacts and improve air quality28Support global action on the export of end-of-life and used vehicles30Support a global initiative to end informal recycling of used lead acid batteries30Support a global initiative to end informal recycling of used lead acid batteries31Zero Pollution Monitoring and Outlook Reports31Zero Pollution Monitoring and Outlook Reports32Develop a 'European Environment and Health Atlas'2022/20222022 bevelop a 'European Environment and Health Atlas'202333hematic hubs, e.g. on digital solutions, clean air tech, soil a sfrom 2021			as from 2024
Improved training and educational support on environmental risks including pharmaceuticals through			
 tailored EU training modules for healthcare and other social care sector workers Guidelines for healthcare professionals on the prudent use of pharmaceuticals and support to include environmental aspects in training and professional development programmes Training and educational support for climate, environment, and health conscious professionals and economic operators. PROMOTING WORLDWIDE CHANGE FOR ZERO POLLUTION PROMOTING WORLDWIDE CHANGE FOR ZERO POLLUTION Promote global zero pollution in all relevant international fora and work with the EU Member States and stakeholders. Advance international cooperation on black carbon policies to reduce climate change impacts and improve air quality Support global action on the export of end-of-life and used vehicles Support initiatives to better monitor and manage international trade for waste electrical and electronic equipment (WEEE) and waste batteries Support a global initiative to end informal recycling of used lead as from 2021/2022 TRACKING FORESS, ANTICIPATING TRENDS AND MAINSTREAMING ZERO POLLUTION Consolidating EU'S Knowledge Centres for Zero Pollution Consolidate the roles of the European Environment Agency (EA) and the Joint Research Centre (JRC) as the EU'S Knowledge Centres of Excellence for Zero Pollution. Zero Pollution Monitoring and Outlook Reports Z022 & 2024 2024 Develop a 'European Environment and Health Atlas' Z023/2024 Launch the Zero Pollution Stakeholder Platform (including thematic hubs, e.g. on digital solutions, clean air tech, soil 			
26other social care sector workers Guidelines for healthcare professionals on the prudent use of pharmaceuticals and support to include environmental aspects in training and professional development programmes • Training and educational support for climate, environment, and health conscious professionals and economic operators.as from 2021PROMOTING WORLDWIDE CHANGE FOR ZERO POLLUTIONFlagship 8Minimising the EU's external pollution footprint Promote global zero pollution in all relevant international fora and work with the EU Member States and stakeholders.as from 202127Advance international cooperation on black carbon policies to reduce climate change impacts and improve air qualityas from 202128Support global action on the export of end-of-life and used vehiclesas from 202129Support initiatives to better monitor and manage international trade for waste electrical and electronic equipment (WEEE) and waste batteriesas from 2021/202230Support a global initiative to end informal recycling of used lead acid batteriesas from 2021/2022TRACKIVE PROGRESS, ANTICIPATING TRENDS AND MAINSTREAMING ZERO FOLLUTIONFlagship 9Consolidate the roles of the European Environment Agency (EEA) and the Joint Research Centre (JRC) as the EU's Knowledge Centres of Excellence for Zero Pollution Consolidate the roles of the European Environment Agency (EEA) and the Joint Research Centre (JRC) as the EU's Knowledge Centres of Excellence for Zero Pollution.as from 202131Zero Pollution Monitoring and Outlook Reports2023/202432Develop a 'European Environment and Health Atlas'2023/2024		environmental risks including pharmaceuticals through	
 Guidelines for healthcare professionals on the prudent use of pharmaceuticals and support to include environmental aspects in training and professional development programmes Training and educational support for climate, environment, and health conscious professionals and economic operators. PROMOTING WORLDWIDE CHANGE FOR ZERO POLLUTION Flagship 8 Minimising the EU's external pollution footprint Promote global zero pollution in all relevant international fora and work with the EU Member States and stakeholders. Advance international cooperation on black carbon policies to reduce climate change impacts and improve air quality as from 2021 Support global action on the export of end-of-life and used vehicles Support a global initiative to better monitor and manage international trade for waste electrical and electronic equipment (WEEE) and waste batteries Support a global initiative to end informal recycling of used lead acid batteries Support a global initiative to end informal recycling of used lead acid batteries Support a global initiative to end informal recycling of used lead acid batteries Consolidating EU's Knowledge Centres for Zero Pollution Consolidate the roles of the European Environment Agency (EEA) and the Joint Research Centre (JRC) as the EU's Knowledge Centres of Excellence for Zero Pollution. Zero Pollution Monitoring and Outlook Reports 2022 & 2024 Develop a 'European Environment and Health Atlas' 2023/2024 Launch the Zero Pollution Stakeholder Platform (including thematic hubs, e.g. on digital solutions, clean air tech, soil as from 2021		• tailored EU training modules for healthcare and	
26use of pharmaceuticals and support to include environmental aspects in training and professional development programmes • Training and educational support for climate, environment, and health conscious professionals and economic operators.as from 2021Flagship 8Minimising the EU's external pollution footprint Promote global zero pollution in all relevant international fora and work with the EU Member States and stakeholders.as from 202127Advance international cooperation on black carbon policies to reduce climate change impacts and improve air qualityas from 202128Support global action on the export of end-of-life and used vehiclesas from 202129Support global action on the export of end-of-life and leetoronic equipment (WEEE) and waste batteriesas from 202130Support a global initiative to end informal recycling of used lead acid batteriesas from 202130Support a global initiative to end informal recycling of used lead acid batteriesas from 202130Support a global initiative to end informal recycling of used lead acid batteriesas from 202131Zero Pollution Monitoring and Outlook Reports2022 & 202432Develop a 'European Environment and Health Atlas'2023/202433taunch the Zero Pollution Stakeholder Platform (including thematic hubs, e.g. on digital solutions, clean air tech, soilas from 2021		other social care sector workers	
environmental aspects in training and professional development programmes• Training and educational support for climate, environment, and health conscious professionals and cenomic operators.• Training and educational support for climate, environment, and health conscious professionals and cenomic operators.• PROMOTING WORLDWIDE CHANGE FOR ZERO POLLUTIONFlagship 8Promote global zero pollution in all relevant international fora and work with the EU Member States and stakeholders.27Advance international cooperation on black carbon policies to reduce climate change impacts and improve air quality28Support global action on the export of end-of-life and used vehicles29Support initiatives to better monitor and manage international trade for waste electrical and electronic equipment (WEEE) and waste batteries30Support a global initiative to end informal recycling of used lead acid batteries30Support a global initiative to end informal recycling of used lead acid batteries30Consolidate the roles of the European Environment Agency (EEA) and the Joint Research Centre (JRC) as the EU's Knowledge Centres of Zero Pollution.31Zero Pollution Monitoring and Outlook Reports2022 & 202432Develop a 'European Environment and Health Atlas'2023/202433thematic hubs, e.g. on digital solutions, clean air tech, soilas from 2021		• Guidelines for healthcare professionals on the prudent	
development programmes• Training and educational support for climate, environment, and health conscious professionals and economic operators.PROMOTING WORLDWIDE CHANGE FOR ZERO POLLUTIONFlagship 8Minimising the EU's external pollution footprint Promote global zero pollution in all relevant international fora and work with the EU Member States and stakeholders.as from 202127Advance international cooperation on black carbon policies to reduce climate change impacts and improve air qualityas from 202128Support global action on the export of end-of-life and used vehiclesas from 202129Support initiatives to better monitor and manage international trade for waste electrical and electronic equipment (WEEE) and waste batteriesas from 202130Support a global initiative to end informal recycling of used lead acid batteriesas from 2021/2022TRACKING PROGRESS, ANTICIPATING TRENDS AND MAINSTREAMING ZERO POLLUTIONConsolidating EU's Knowledge Centres for Zero Pollution Consolidate the roles of the European Environment Agency (EEA) and the Joint Research Centre (JRC) as the EU's Knowledge Centres of Excellence for Zero Pollution.as from 202131Zero Pollution Monitoring and Outlook Reports2022 & 202432Develop a 'European Environment and Health Atlas'2023/202433thematic hubs, e.g. on digital solutions, clean air tech, soilas from 2021	26		as from 2021

In addition to these actions, many 'zero pollution' actions already planned under the European Green Deal and other initiatives will be essential for achieving the zero pollution ambiton¹.

¹ See in particular the lists of actions in the annexes to the following initiatives (non-exhaustive list): COM(2020) 98, COM(2020) 102, COM(2020) 299, COM(2020) 301, COM(2020) 380, COM(2020) 381, COM(2020) 562, COM(2020) 662, COM(2020) 663, COM(2020) 667, COM(2020) 696, COM(2020) 741, COM(2020) 761, COM(2020) 788, COM(2020)789, COM(2021) 44, COM(2021) 66, COM(2021) 82 and JOIN(2021) 3.

ANNEX 2

EXPLANATIONS FOR THE TARGETS SET OUT IN THE ZERO POLLUTION ACTION PLAN

Target 1: By 2030 the EU should reduce by more than 55% the health impacts (premature deaths) of air pollution

Basis: National Emission reduction Commitments Directive (EU) 2016/2284

<u>Description</u>: The reduction is projected to be achieved through fine particulate matter ($PM_{2.5}$) emissions reduction, if all Member States implement all measures announced in their first National Air Pollution Control Programmes (Article 6 of Directive (EU) 2016/2284) to reach the objectives of the Directive, and based on the full implementation of other relevant legislation (including, in particular, energy and climate policies). Reduction of emissions of air pollutants other than $PM_{2.5}$ (which are also covered by the NEC Directive) will deliver additional positive health effects.

Reference year: 2005

Evidence base: Second Clean Air Outlook² and underpinning study³

<u>Monitoring:</u> Update of the Clean Air Outlook through the Zero Pollution Monitoring and Outlook Framework⁴

Target 2: By 2030 the EU should reduce by 30% the share of people chronically disturbed by transport noise

Basis: Environmental Noise Directive 2002/49/EC

Description: The target is based on a 2021 Commission study analysing the official Member State data on noise exposure (Article 7 of the Environmental Noise Directive), national noise action plans covering the 2018-2024 period (Article 8 of the Environmental Noise Directive) and the 2020 EEA outlook on environmental noise in Europe⁵. The study quantified the reduction in noise-related health issues which can derive from implementing cost-effective measures, including solutions already available on the market. Some of those stem from specific noise limits mandatory under EU law (e.g.: on tyres⁶, on road vehicles⁷, on quiet wagons⁸), whilst others (e.g.: on quieter road surfaces, on smooth and quieter rails, on flight timeframes and procedures) require measures to be taken at national/local level under the Environmental Noise Directive in interplay with other relevant EU law⁹: the overall coordination and ambition level of the latter are left to the discretion of the relevant national/local authorities. Overall, the assessment of different scenarios integrating measures on roads, railways and airports showed that, compared to 2017, the expected reduction in noise-related health issues by 2030 ranged from 15% to 45%, with the most modest reduction stemming from the implementation of a few measures linked to the specific noise limits mandatory under EU law, and the highest reduction from a combination of the first scenario

⁴ SWD(2021) 141

⁵ https://www.eea.europa.eu/publications/environmental-noise-in-europe

⁶ https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A32009R0661

⁷ https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A32014R0540

⁸ https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A32019R0774

⁹ https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A32014R0598

together with stronger measures at local level. Thus, a reduction of 30% by 2030 is proposed as a realistic ambition, mainly achievable through a better implementation of relevant EU law and sound support to urban and regional zero-pollution actions on noise.

Reference year: 2017

Evidence base: EU study (2021) 'Assessment of potential health benefits of noise abatement measures in the EU^{10}

<u>Monitoring:</u> Update of the regular EEA assessment (latest EEA Report No 22/2019¹¹) to be included in the Zero Pollution Monitoring and Outlook Framework¹²

Target 3: By 2030 the EU should reduce by 25% the EU ecosystems where air pollution threatens biodiversity

Basis: National Emission reduction Commitments Directive (EU) 2016/2284

<u>Description:</u> The Second Clean Air Outlook and its underpinning study calculated that, based on the full implementation of all measures announced by Member States in their first National Air Pollution Control Programmes (Article 6 of Directive (EU) 2016/2284), a reduction of 20% of the ecosystem areas measured as areas above 'critical loads' of nitrogen deposition can be achieved by 2030 compared to 2005.

These estimates do not take into account the additional measures needed to achieve the 50% reduction of nutrient losses as set out in both the Farm to Fork and the Biodiversity Strategies and the nature restoration targets set out in the 2030 Biodiversity Strategy. Thus, a reduction of 25% compared to 2005 is proposed as a realistic ambition, achievable through the implementation of the measures already announced by the Member States in their first National Air Pollution Control Programmes in combination with the implementation of the additional measures needed to achieve the targets set in the Farm to Fork and Biodiversity Strategies.

Reference year: 2005

Evidence base: Second Clean Air Outlook¹³ and underpinning study (in particular Table 3.12)¹⁴

<u>Monitoring:</u> Update of the Clean Air Outlook through the Zero Pollution Monitoring and Outlook Framework¹⁵

Target 4: By 2030 the EU should reduce by 50% nutrient losses, the use and risk of chemical pesticides and the use of the more hazardous ones, and the sale of antimicrobials for farmed animals and in aquaculture

<u>Basis:</u> The Biodiversity¹⁶ and Farm to Fork¹⁷ Strategies set out the following targets:

• "50% reduction of nutrient losses by 2030. The target shall ensure that there is no deterioration in soil fertility and will lead to 20% reduction of the use of fertilisers."

¹⁵ SWD(2021) 141

¹⁶ COM(2020) 380

¹⁷ COM(2020) 381

- "By 2030, 50% reduction of the overall use and risk of chemical pesticides and 50% reduction of the use of more hazardous pesticides."
- "50% reduction of overall EU sales of antimicrobials for farmed animals and in aquaculture by 2030."

Description:

Nutrients: This target will be achieved by implementing and enforcing the relevant environmental and climate legislation in full, identifying with Member States the nutrient load reductions needed to achieve these goals, applying balanced fertilisation and sustainable nutrient management, stimulating the markets for recovered nutrients and by managing nitrogen and phosphorus better throughout their lifecycle.

Pesticides: This target will be achieved in a number of steps, in particular, the revision of the Sustainable Use of Pesticides Directive, proposals for stricter provisions on integrated pest management (IPM) and promotion of a greater use of safe alternative ways of protecting harvests from pests and diseases. The target includes 50% reduction of three aspects, the use of chemical pesticides, the use of the most hazardous pesticides and the risk that the use causes.

Antimicrobials: The new Regulations on veterinary medicinal products and medicated feed provide for a wide range of measures to help achieve this objective and promote 'one health'.

Reference year: Compared to 2012-2015 (nutrients), 2011-2017 (pesticides) and 2018 (antimicrobials)

<u>Evidence base:</u> Biodiversity and Farm to Fork Strategies, annex I to the Recommendations to the Member States as regards their Strategic Plans for the Common Agricultural Policy¹⁸

<u>Monitoring</u>: Indicators for the quantified Green Deal targets¹⁹ to be included in the Zero Pollution Monitoring and Outlook Framework²⁰

Target 5: By 2030 the EU should reduce by 50% plastic litter at sea and by 30% microplastics released into the environment

<u>Basis:</u> Directive on the reduction of the impact of certain plastic products on the environment (EU) 2019/904 ('Single Use Plastics Directive') and Marine Strategy Framework Directive 2008/56/EC, Chemicals' legislation (REACH)

Description:

Plastic litter at sea: Reaching the target of 50% reduction by 2030 would include consumption changes triggered by the sound implementation of existing (mainly the Waste Framework Directive) and new (mainly the Single Use Plastic Directive) EU law. Monitoring beach litter quantities, as required by the Marine Strategy Framework Directive, will be used as a proxy to track progress. Hence, this target will be achieved through the combination of the measures foreseen to reduce plastics use and waste and to foster a cleaner and more circular economy.

Microplastics: According to a 2018 Commission study²¹, a 30% reduction by 2035 of microplastic emissions onto surface waters is feasible, provided that a combination of measures to

¹⁸ COM(2020) 846, Annex 1

¹⁹ COM(2020) 846, Annex 1

²⁰ SWD(2021) 141

tackle them from pellets, tyres and textiles is implemented. Moreover, the European Chemicals Agency (ECHA) analysed that, if appropriate prevention measures under the REACH Regulation are applied to the use of micro-plastics intentionally put in products (e.g. cosmetics, detergents), a 60% reduction in micro-plastic emissions over the next 20 years is feasible too. Thus, a 30% reduction by 2030 is proposed as a realistic ambition, mainly achievable through a sound implementation of the 2020 Circular Economy Action Plan.

Reference year: 2016

<u>Evidence base:</u> Impact Assessment²² for the Proposal of (now) Directive (EU) 2019/904 (plastic litter) and reports from the European Chemicals Agency (microplastics)²³ as well as underpinning studies²⁴ for the impact assessment for the Single Use Plastics Directive

<u>Monitoring</u>: The Marine Strategy Framework Directive (MSFD) requires regular monitoring of beach litter quantities by the Member States. On this basis the "EU Marine Beach Litter Baselines"²⁵ was produced. MSFD monitoring (supported by EMODNET²⁶) will be included in the Zero Pollution Monitoring and Outlook Framework²⁷.

Target 6: By 2030 the EU should reduce significantly total waste generation and by 50% residual municipal waste

Basis: Circular Economy Action Plan²⁸ and Waste Framework Directive 2008/98/EC

<u>Description</u>: Aspirational target on the generation of total waste and residual municipal waste per capita within the EU which have been steadily increasing since 2014. The Commission intends to reinforce the waste hierarchy set out in Article 4 of Directive 2008/98/EC, which mandates the prioritization of waste prevention, by proposing waste reduction targets and other waste prevention measures in the context of the review of Directive 2008/98/EC, planned for 2023.

<u>Reference year:</u> To be defined

<u>Evidence base</u>: Eurostat database on waste²⁹, EEA reports on the Waste Prevention Programmes³⁰ and data on re-use provided by Member States in accordance with Article 37(3) of the Waste Framework Directive

<u>Monitoring</u>: Indicators under and Eurostat database on waste³¹ and the Circular Economy Monitoring Framework³² to be included in the Zero Pollution Monitoring and Outlook Framework³³
