Subject:	REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL on the production and marketing of plant reproductive material in the Union, amending Regulations (EU) 2016/2031, 2017/625 and 2018/848 of the European Parliament and of the Council, and repealing Council Directives 66/401/EEC, 66/402/EEC, 68/193/EEC, 2002/53/EC, 2002/54/EC, 2002/55/EC, 2002/56/EC, 2002/57/EC, 2008/72/EC and 2008/90/EC (Regulation on plant reproductive material) *- Preparation for the trilogue*

I. INTRODUCTION

1. On 5 July 2023, the Commission adopted a legislative proposal to revise and update the rules on the production and marketing of plant reproductive material (PRM) in the Union. The proposal and the accompanying impact assessment were submitted to the Council on 6 July 2023.

2. The applicable legislation in the PRM area currently consists of several Directives, some dating back to the 1960s. According to the Commission, this fragmentation in the rules results in differing implementation between Member States and a high administrative burden for the competent authorities and operators. Moreover, in view of the Commission, the current legislation is not consistent with other legislation on plant health and official controls, is outdated from a scientific and technical point of view and needs to be modified to promote new improved varieties and to adapt to the climate challenges.

3. The Commission proposal[1] introduced a new legislative approach, replacing the 10 PRM marketing directives with a single regulation. In particular, it aimed to:

   – simplify the legal framework through clarified and harmonised rules;

   – facilitate technical progress in order to foster digital and novel technologies, such as the use of bio-molecular techniques;

   – reduce the administrative burden;

   – ensure the availability of high quality PRM adapted to the changing agricultural and environmental conditions;

   – ensure food and feed security, the conservation of plant genetic resources and the protection of biodiversity;

   – improve consistency with the official controls and plant health legislation.

4. The proposal is based on Article 43(2) of the Treaty on the Functioning of the European Union (TFEU) (ordinary legislative procedure).

5. Both the European Economic and Social Committee (EESC) and the European Committee of the Regions (COR) were consulted. The EESC adopted its opinion on 13 December 2023[2]. The COR adopted its opinion on 17 April 2024[3].

6. In the European Parliament, the Committee on Agriculture and Rural Development has lead responsibility and Mr Herbert Dorfmann (EPP, Italy) has been appointed as rapporteur. The Committee on the Environment, Climate and Food Safety (ENVI) is an associated committee.

7. The European Parliament adopted its position at first reading on 24 April 2024[4].

8. On 10 December 2025, the Permanent Representatives Committee agreed on a mandate for the Council to enter into negotiations with the European Parliament[5].

II. STATE OF PLAY

9. Since the beginning of the Cyprus Presidency, two informal political trilogues (on 3 February and 21 April 2026) and 32 interinstitutional technical meetings have been held with the European Parliament and the Commission. These meetings have allowed to discuss and tentatively agree on a large number of provisions.

10. Delegations were consulted throughout the process during informal meetings of the members of the Working Party on Genetic Resources and Innovation in Agriculture (Seeds, Propagating and Planting Materials) and of the Working Party of Counsellors/Attaches (Genetic Resources and Innovation in Agriculture) held on 12 February, 5 March, 27 March, 30 April and 28 May 2026, respectively.

11. The discussions during the interinstitutional negotiations have allowed to identify eleven key issues where the positions of the institutions differed (see Annex A).

III. PROPOSAL FOR A REVISED MANDATE

12. During the interinstitutional negotiations, provisional agreements were reached on a significant number of provisions, including several of the eleven key issues referred to in point 11. The provisional agreements reached maintain the Council mandate, including on the following issues for a few of which only limited adjustements were made:

    a) List of species for which the VSCU examination is to be mandatory (Article 47(1)(a)(i) and Annex I), which would remain as proposed by the Council (vine, potato, and the genera and species of agricultural plants except for varieties used exclusively for turf grass purposes);

    b) Requirements for a variety in order to be considered of satisfactory value for sustainable cultivation and use, where the word ‘clear’ has been deleted (Article 52(1), row 719);

    c) Imports of PRM from third countries, where the Council mandate has been secured to a large extent, including on the mandatory first audit by the Commission, with some changes in the text to avoid duplication of audits and to provide for voluntary support from Member States to assist the Commission during such audits (Article 39);

PUBLIC

d) Exemption of Chapter IV (variety registration) from the scope of the OCR (Article 80(1), row 945);

e) "In kind" exchange (Article 30), where the European Parliament withdrew its amendment on allowing for monetary compensation in return for such transaction, hence the Council position that such exchange should be "in kind" was secured.

f) PRM of heterogeneous material (Article 27);

g) Intellectual property rights, where the European Parliament withdrew its amendments (AMD 116, 244 and 313);

h) Conservation of plant genetic resources, where the Council mandate was largely kept on the relevant definitions with some textual modifications being made, as well as on Articles 26 and 29. With regard to Article 29(1), it was agreed that not only the nature of such activity but also the nature of those organisations should be non-profit. In addition, the European Parliament agreed to drop its amendment on the exemption of PRM in small quantities from the scope of the Regulation (AMD 315).

All the provisionally agreed elements have been marked in green in the four-column table (see Annex B[6]).

13. In addition, on certain issues, a tentative compromise has been identified between the institutions at technical level. The Presidency considers that these elements, highlighted in yellow in the four-column table, should be acceptable to delegations based on prior consultations. These are the following issues:

a) VSCU (Article 52(1), row 720), where, as a compromise, the wording of the Commission proposal would be retained, meaning that the examination of the 7 characteristics proposed by the Commission should be mandatory;

b) Official controls (Article 80a, row 967b), where, as a compromise, Article 11 (Transparency of official controls) of the OCR would be deleted, hence it would become applicable for the PRM sector;

[6] Annex I to the draft agreement can be found in Annex C to this note

c) Derogation on PRM produced for and marketed to non-professional users (Article 28(1), row 480), where, as a compromise, the scope of this provision would be extended to all PRM with the exception of *Cannabis sativa* L., *Papaver somniferum* L, *Solanum tuberosum* L., and PRM used for turf grass purposes;

d) Entry into application of the Regulation (Article 83, row 989), where, as a compromise, 48 months would be indicated.

14. Nevertheless, based on the state of play of the negotiations, the current mandate may not provide the Presidency with a sufficient margin to negotiate with the European Parliament on four remaining contentious issues. These issues are highlighted in red in the four-column table. To be able to progress efficiently during the upcoming trilogue and with a view to reaching a political agreement, the Presidency considers that the following approach would provide a good basis for a compromise with the European Parliament:

a) **VSCU review clause (Article 82g, rows 986w-z)**, where the European Parliament proposes that the Commission does the review only after 10 years from the entry into application of the Regulation. The Commission however argues that this wording contradicts the TFEU as it takes away the Commission's right of initiative. The Presidency proposes to be flexible with the wording of the review clause, provided that it remains legally sound. Alternatively, the Council could also be open to agree to the deletion of the review clause, should the other two institutions prefer this option.

b) **Derogation on seed exchanged in kind between farmers (Article 30)**:

i) Scope (Article 30(1), row 497): the Presidency proposes to show flexibility and agree on enlarging the scope of this provision to all PRM other than PRM of *Cannabis sativa* L., *Papaver somniferum* L., *Solanum tuberosum* L., Citrus L. and Vitis L.;

ii) Locality (Article 30(2)(ba), row 504a): the Presidency proposes to defend the Council mandate. However, if there is a need to show flexibility, as a fall-back position, the it proposes to agree to an amended text to clarify the possibility of cross-border exchanges between neighbouring countries.

c) **Herbicide tolerant varieties (Article 47(1)(f), row 688)**: the Presidency proposes to accept a compromise indicating that such cultivation conditions may be determined by the competent authority for the territory of the Member State concerned. However, if there is a need to show further flexibility, as a fall-back position, it proposes to agree that in cases where cultivation conditions have not been determined by the competent authority for the territory of the Member State concerned, the user must have access to appropriate cultivation conditions proposed by the applicant.

d) **Exemption of micro-enterprises from certain requirements (Article 41, row 648a)**: the Presidency proposes to defend the Council mandate. However, if there is a need to show flexibility, as a fall-back position, it proposes to agree to exempt nano-sized professional operators, which are to be defined in the PRM Regulation, from the requirements in Article 41, (d) and (e).

IV. CONCLUSION

15. In view of the informal political trilogue on 15 June 2026, the Permanent Representatives Committee is invited to:

– endorse all the provisionally agreed elements referred to in point 12, marked in green in the four-column table set out in Annex B;

– validate the tentative agreements reached on the issues described in point 13, marked in yellow in the four-column table; and

– agree on the proposed approach as described in point 14 on the remaining four issues marked in red in the four-column table, indicating any possible strong reservations.

PUBLIC

ANNEX A

List of eleven key issues where the positions of the institutions differed

a) Examination of a variety for its value for sustainable cultivation and use (VSCU):

i) *List of species for which the VSCU examination is to be mandatory (Article 47(1)(a)(i) and Annex I),* where, as one of the main novelties of the Regulation, the Commission proposes to require mandatory VSCU examination for all species, including agricultural plant species, potato, vine, vegetable and fruit plant species, in order for a variety to be registered in a national register. The Council, on the other hand, proposes to maintain the status quo, as applicable under the current Directives, requiring mandatory VSCU examination for agricultural plant species (with the exception of varieties used exclusively for turf grass purposes), and for potato and vine. The European Parliament proposes mandatory VSCU examination for agricultural plant species, potato and vine, and in the case of vegetable and fruit species, allows that such examination be carried out on a voluntary basis requested by the operators. In addition, the European Parliament requires the Commission to evaluate the results of such voluntary system and to prepare a report in 10 years and requests a claim to be included on the label if the VSCU examination has been carried out.

ii) *Characteristics to be examined during the VSCU examination (Article 52(1)),* where the Commission proposes seven characteristics to be mandatory (3 new ones in addition to the already mandatory ones as referred to in Commission Directive 2003/90/EC), while the Council proposes them as optional. The European Parliament did not adopt any amendments in relation to the mandatory or voluntary nature of the characteristics.

PUBLIC

b) Imports of PRM from third countries (Articles 39, 40 and 40a of the Council mandate), where the Commission proposes that imports would be allowed based on equivalence granted by implementing acts based on certain criteria and audits. Such audits would be carried out when considered necessary by the Commission. Furthermore, imports would not be allowed for PRM produced under certain derogations. While both the Council and the European Parliament agree with this approach, the Council requires the Commission to systematically carry out an audit in a third country before an equivalence is granted to that country for the first time. In addition, the Council allows "seed as grown" of vegetable species to be imported without equivalence on the basis of specific criteria. The European Parliament allows imports of PRM of those categories that fall under certain derogations, if they originate from neighbouring countries.

c) Application of the Regulation on Official Controls (OCR) to PRM (Articles 80 and 80a of the Council mandate), where the Commission proposes to include the PRM Regulation under the scope of the OCR, while the Council proposes that variety registration (Chapter IV of the Regulation) be exempted from the scope of the OCR and a horizontal derogation from Articles 6, 11, 37(4), point (e) and Articles 109-113 of the OCR for the entire PRM sector is created. The European Parliament did not adopt any amendments on this issue.

d) Conservation of plant genetic resources:

i) Definitions

– *Definitions of "conservation variety" and "local variety" (Article 3(29) and 3(29a of the Council mandate))*, where the Commission proposed one single definition for "conservation variety", which includes the concept of local breeding, while the Council proposes a separate definition for "local variety". The European Parliament keeps the definition of "conservation variety" with modifications.

– *Definition of "dynamic conservation" (Article 3(35a)),* which is proposed by the European Parliament but not mentioned in either the Commission proposal or the Council mandate.

– *Definition of "gene bank" (Article 3(35a)),* which is proposed by the Council but not defined in either the Commission proposal or the European Parliament's position.

ii) *Derogation on PRM belonging to conservation varieties (Article 26),* where the Commission proposes that such PRM may be produced and marketed in the Union as standard seed or material, while the Council proposes to limit the production of such PRM to the respective region of origin unless they belong to a variety that has previously been registered in a national variety register with an official description. In addition, the Council proposes notification obligations for the professional operators towards the competent authorities. The European Parliament did not adopt any significant amendments on this article.

iii) *Derogation on PRM marketed to and between gene banks, organisations and networks (Article 29),* where the Commission proposes that such entities benefit from lighter rules in order to conserve plant genetic resources and that any of such activities are to be carried out for non-profit purposes. While the Council generally agrees with this approach, it opens the scope of this article also to the production of PRM. On the other hand, the European Parliament proposes that the production and marketing of PRM by conservation organisations and networks in small quantities (as defined in Annex VIIa) are to be exempted from the scope of the Regulation. In addition, the European Parliament proposes that the members of such organisations should be also covered by these provisions.

iv) *Exemption from the scope of PRM in small quantities (Annex VIIa),* where the European Parliament proposes an exemption from the scope of the Regulation for PRM produced by "dynamic conservation" activities under certain quantities as defined in Annex VIIa (see above).

PUBLIC

e) Derogation on PRM of heterogeneous material (Article 27), where the Commission proposes that all rules concerning the production and marketing of PRM of heterogeneous material, regardless of whether it is conventional or organic, fall under the scope of the PRM Regulation but benefit from lighter conditions. This would entail amending Regulation (EU) 2018/848[7] (Organic Regulation). The Council, on the other hand, proposes to exempt from the scope of the PRM Regulation organic heterogeneous material produced in accordance with the Organic Regulation (hence those would remain to be covered by that Regulation), and proposes not to include any rules on conventional heterogeneous material by deleting Article 27. The European Parliament proposes to maintain Article 27 but excludes PRM of fodder plants from this derogation. In addition, it excludes organic heterogenous material from the scope of the PRM Regulation.

f) Derogation on PRM marketed to final users (Article 28), where the Commission proposes that such PRM benefits from lighter rules, while the Council proposes to restrict this provision to fruit and vegetable plant species. In addition, the Council adds production to the scope of this article and proposes further labelling and notification requirements. The Council also proposes a review clause in Article 82a according to which the Commission should prepare a report in 5 years after the entry into application of the Regulation concerning the application of Article 28 (as well as of Article 30).The European Parliament did not adopt any significant amendments on this issue, apart from deleting the empowerment to the Commission for an implementing act by which detailed provisions concerning the size, form and handling requirements of small packages would be set, as they define small packages in Article 3.

[7] Regulation (EU) 2018/848 of the European Parliament and of the Council of 30 May 2018 on organic production and labelling of organic products

g) Derogation on seed exchanged in kind between farmers (Article 30), where the Commission proposes to limit this derogation only to seed and to exchange "in kind" (not involving any monetary compensation). In addition, it proposes to limit the exchange to small quantities which are to be defined at national level. While the Council agrees with this approach, it limits such exchange to local level, and proposes a review clause in Article 82a according to which the Commission should prepare a report in 5 years after the entry into application of the Regulation concerning the application of Article 30 (as well as of Article 28). The European Parliament proposes to extend the scope of this derogation to cover also vegetative PRM (e.g. cuttings and tubers) and allows the possibility of monetary compensation. In addition, instead of allowing the Member States to define the quantities, the European Parliament proposes to empower the Commission to set those by a delegated act.

h) Herbicide tolerant varieties and varieties that may have undesirable agronomic effects (Article 47(1)(f), where the Commission proposed that the registration of such varieties be subject to cultivation conditions adopted by the competent authority, while the Council opted for a voluntary approach allowing also the possibility for the competent authorities to determine the cultivation conditions for their territories. The European Parliament maintained the mandatory approach.

i) Disclosure of intellectual property rights and breeding techniques (Article 56(1)), where the European Parliament proposes that in relation to the contents of the application for registration of a variety, the existence of any intellectual property rights covering the variety, its components and characteristics, as well as the breeding techniques used for the development of the variety should be disclosed. Neither the Commission proposal, nor the Council mandate contains provisions on intellectual property rights.

j) Date of application of the Regulation (Article 83), where the Commission proposes that the Regulation should apply from 36 months from the date of the entry into force, while the Council proposes 60 months. The European Parliament did not adopt any amendments on this provision.

k) Exemption of micro-enterprises from certain requirements (Article 41), where the European Parliament proposes their exemption from certain requirements applicable for professional operators.
