The Fiscal Statistical Tables provide background data relevant for the assessment of the 2023 Stability or Convergence Programmes.

In detail, the following tables are provided for each Member State:

**Table 1 (Macroeconomic developments and forecasts)** shows the main macroeconomic data, including real GDP growth and its components, the output gap, employment, unemployment, labour productivity, inflation, the GDP deflator, compensation of employees, and the net borrowing/lending vis-à-vis the rest of the world. The projections from the 2023 Stability or Convergence Programmes are shown side-by-side with those of the Commission 2023 spring forecast.

**Table 2 (General government budgetary position)** shows data on the main general government revenue and expenditure variables and budgetary targets in the 2023 Stability or Convergence Programmes, in comparison with the Commission 2023 spring forecast.

**Table 3 (Main indicators for fiscal surveillance)** includes the relevant fiscal indicators that are used for fiscal surveillance at this stage. The table also details the setting of the recommended (maximum) growth rate for net nationally financed primary expenditure in 2024.

**Table 4 (General government debt developments)** shows the evolution of general government debt and provides a breakdown of the change in the debt-to-GDP ratio based on the contributions of the primary balance, the 'snow-ball effect' (reflecting the relationship between nominal GDP growth and interest expenditure), and the 'stock-flow adjustment' (that is, other factors that have an impact on general government debt, such as differences between cash and accrual recording, or the net accumulation of financial assets).

**Table 5 (Recovery and Resilience Facility – Grants)** presents data on grants from the Recovery and Resilience Facility as included in the Programmes' revenue projections, their cash disbursements, and the expenditure categories (or other costs) financed by those grants.

**Table 6 (Recovery and Resilience Facility – Loans)**, where applicable, presents data on cash disbursements and repayments of loans from/to the Recovery and Resilience Facility as included in the Programmes' projections, their cash disbursements, and the expenditure categories (or other costs) financed by those loans.

The Fiscal Statistical Tables are complemented by two thematic boxes:

**Box 1 (Fiscal surveillance indicators used in the assessment of the 2023 Stability or Convergence Programmes)** provides details on the definition of the fiscal stance and its components for fiscal surveillance purposes at this stage, and explains how the recommended fiscal adjustment for 2024 – which, in the 2023 spring economic surveillance round, is established as a growth rate of net nationally financed primary expenditure – has been set.

**Box 2 (Statistical recording of Recovery and Resilience Facility-related flows)** summarises the fundamental principles underlying the recording of these transactions.

The Fiscal Statistical Tables reproduce data from the 2023 Stability or Convergence Programmes, as publicly reported in those documents. Therefore, the accuracy and quality of the data presented in the tables is influenced by how the information was provided in those source documents.

Differences between the projections in the 2023 Stability or Convergence Programmes and the Commission 2023 spring forecast may result from different assumptions/analyses on the macroeconomic and budgetary outlook.

Given that Denmark did not submit its 2023 Convergence Programme in a timely manner, the Commission was not able to assess it. Therefore, the Fiscal Statistical Tables for Denmark are strictly based on the Commission 2023 spring forecast.

## Fiscal surveillance indicators used in the assessment of the 2023 Stability or Convergence Programmes

### Definition of fiscal stance and its components

Traditionally, the fiscal stance is defined as a measure of the annual change in the underlying budgetary position of the general government. It may serve to assess the impact of fiscal policy on an economy's aggregate demand, as well as the speed at which the underlying budgetary position converges towards medium-term budgetary targets. Using the same indicator to gauge two different concepts was appropriate under the assumption that government expenditure was funded by national revenue sources and debt-financing, without large external transfers. However, in the presence of sizeable transfers from the EU budget (such as those from the Recovery and Resilience Facility or other EU grants), conventional indicators do not capture the additional fiscal impulse provided by the EU budget, as the related expenditure is offset by matching revenue from the EU.

The fiscal stance reported in Table 3 for each Member State aims to assess the economic impulse stemming from fiscal policies, both those that are nationally financed and those that are financed by the EU budget. It measures the change in primary expenditure, net of the incremental impact of discretionary revenue measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by Recovery and Resilience Facility grants and other EU funds, relative to the medium-term (10-year) average potential GDP growth rate, in nominal terms.

$$\text{Fiscal Stance}_t = \frac{(1+Pot_t) \cdot (1+\pi_t) \cdot E_{t-1} - (E_t - \Delta RM_t)}{GDP_t}$$

Where ' $Pot_t$ ' is the medium-term (10-year) average potential GDP growth rate, ' $\pi_t$ ' is the GDP deflator, and  $E_t = G_t - I_t - U_t - one\_offs_t^G - (pandemic-related\ emergency\ temporary\ measures_t^G)$ , in a given year ' $t$ '.

The expenditure aggregate ' $E_t$ ' comprises primary expenditure (total expenditure ' $G_t$ ' less interest expenditure ' $I_t$ '), net of cyclical unemployment benefits ' $U_t$ ' and one-off expenditure ' $one\_offs_t^G$ ', in a given year ' $t$ '. In turn, ' $\Delta RM_t$ ' stands for the incremental budgetary impact of revenue measures (other than one-off revenue), in a given year ' $t$ '. In view of the exceptional circumstances created by the impact of the COVID-19 pandemic, pandemic-related temporary emergency measures are also excluded from both the expenditure aggregate ' $E_t$ ' and the incremental budgetary impact of revenue measures ' $\Delta RM_t$ '.<sup>(1)</sup>

In order to monitor compliance with the Council recommendations, the Commission also examines whether the projected evolution of net nationally financed primary expenditure is expected to be the result of continued temporary and targeted support to households and firms most vulnerable to energy price hikes and to people fleeing Ukraine. Therefore, Table 3 also presents the change in the net budgetary cost<sup>(2)</sup> of: (i) energy measures in response to high energy prices; (ii) energy support measures targeted at vulnerable households and firms; and, (iii) support to persons fleeing Ukraine.<sup>(3)</sup>

<sup>(1)</sup> COVID-19 pandemic-related emergency measures generally aimed at addressing the public health situation and compensating workers and firms for income losses due to lockdown measures and supply chain disruptions. These measures were mostly of a temporary nature, but their impact was contingent on the development of the health situation.

<sup>(2)</sup> This includes the budgetary cost of energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

Furthermore, Table 3 also monitors the growth rate of net nationally financed primary expenditure ' $\Delta NNPE_t$ '. That aggregate is very similar to the one used for the fiscal stance, but it excludes expenditure financed by the EU budget. As a rule, in a given year ' $t$ ', the net nationally financed primary expenditure aggregate ' $NNPE_t$ ' is calculated as:

$$NNPE_t = E_t - \Delta RM_t = G_t - I_t - U_t - EU_t - one_{offs_t}^G - \Delta RM_t$$

### **Setting the recommended fiscal adjustment for 2024**

When setting the recommended fiscal adjustment – which, in the 2023 spring economic surveillance round, is established as a growth rate of net nationally financed primary expenditure – the Commission started from an annual improvement in the structural balance towards the medium-term budgetary objective (MTO) of 0.5% of GDP – as a benchmark – as called for by Council Regulation (EC) No 1466/97.<sup>(4)</sup> This effort was modulated within a bandwidth of +/- 0.2 percentage points of GDP (hence, within a window of minimum 0.3 and maximum 0.7% of GDP) based on fiscal sustainability considerations. In particular, the Commission took into account the average annual increase in the structural (primary) balance needed to achieve a plausible debt reduction or ensure that government debt remains at prudent levels over the medium term.<sup>(5)</sup>

In addition, for Member States whose structural balance in 2023 is projected to reach a position at or above the MTO, no fiscal adjustment was recommended for 2024. In turn, for Member States whose structural balance is expected to be below – but close to – the MTO in 2023, the recommended fiscal adjustment for 2024 was capped to the projected distance to the MTO. Finally, where applicable, the Commission also took into consideration the need for Member States to reduce the general government deficit to below the Treaty reference value of 3% of GDP. In those cases, a minimum improvement in the structural balance of 0.5% of GDP towards the MTO was set for 2024.

The resulting fiscal adjustment for 2024 – expressed in terms of an improvement in the structural balance ' $\Delta SB_{2024}^*$ ' – was then translated into an improvement in the structural primary balance ' $\Delta SPB_{2024}^*$ ', taking into consideration interest expenditure developments ' $\Delta I_{2024}$ ' as projected based on the Commission 2023 spring forecast. Subsequently, the resulting fiscal effort was converted into a (maximum) growth rate in net nationally financed primary expenditure ' $\Delta NNPE_{2024}^*$ ', on which basis the recommendation was ultimately established:

$$\Delta NNPE_{2024}^* = (1 + Pot_{2024}) \cdot (1 + \pi_{2024}) \cdot \frac{\Delta SPB_{2024}^*}{\frac{NNPE_{2023}}{GDP_{2024}} \cdot 100} - 1$$

Where ' $NNPE_{2023}$ ' is nationally financed primary expenditure (net of one-off expenditure and cyclical unemployment expenditure), and  $SPB_{2024}^* = \Delta SB_{2024}^* + \Delta I_{2024}$ .

<sup>(3)</sup> With regard to the change in the budgetary cost of the sets of measures referred to in categories (ii) and (iii), Table 3 reports the corresponding impact on the change in net nationally financed primary current expenditure.

<sup>(4)</sup> Cf. Article 5 of Council Regulation (EC) No 1466/97, which also requires an adjustment of more than 0.5% of GDP for Member States with a government debt exceeding 60% of GDP, or with more pronounced debt sustainability risks.

<sup>(5)</sup> This estimate was based on the Commission 2022 autumn forecast. The starting point for this estimate was the projected general government deficit and debt for 2024, which assumed the withdrawal of energy support measures in 2024.

Eurostat has issued guidance on the statistical recording of flows related to the Recovery and Resilience Facility (RRF). <sup>(6)</sup> In this context, please note the following fundamental principles for the statistical recording of RRF-related flows:

- **RRF grants are recorded by matching the time of recording of revenue from the EU with the time of recording of expenditure financed by these grants.** This is irrespective of the timing of disbursements or pre-financing. This approach is by analogy to the recording of the traditional EU-fund related flows and it is often referred to as the '*principle of neutrality of EU flows*'. It ensures that timing differences - leads or lags - between disbursements and concrete spending do not have an effect on the government balance. This principle is well established, including in the ESA 2010 Regulation.
- **The government sector is the counterpart of the RRF grants.** While some RRF grants may ultimately be channelled to non-governmental entities in the form of subsidies and/or transfers, the RRF Regulation establishes that the financing applies at the level of payments from the Commission to the Member States as beneficiaries, irrespective of the further use of the RRF funds. This is somewhat different from the statistical recording of other EU fund-related flows, where the beneficiary, for national accounts purposes, can be either the government or a non-governmental entity.
- **Loans extended by the RRF to the Member States add to their government's debt.** At the same time, borrowing taken out by the Commission to finance RRF grants is considered as EU debt and, therefore, it is not attributed to the Member States.

In the Fiscal Statistical Tables, these fundamental principles underly the statistical reporting of RRF-related flows as presented in Table 2 (General government budgetary position), Table 3 (Main indicators for fiscal surveillance), Table 5 (Recovery and Resilience Facility – Grants), and, where applicable, also in Table 6 (Recovery and Resilience Facility – Loans).

10	Change in net budgetary cost of targeted energy support measures (current expenditure)	0.2		-0.1		-0.1	
11	Change in budgetary cost of support to persons fleeing Ukraine (current expenditure)	0.1		0.0		0.0	
	p.m.: Pandemic-related measures (% of GDP)						
12	Change in total budgetary cost of pandemic-related temporary emergency measures	-2.5		-0.5		0.0	
	Background structural fiscal indicators						
13	Structural balance in 2023 (% of potential GDP)					-4.9	
14	Medium-term budgetary objective (MTO)					0.75	
15	At or above MTO at the start of the year?					No	
16=14-13	Distance to MTO (pps. of potential GDP)					5.6	
	Setting the recommended fiscal adjustment for 2024						
17	Recommended (minimum) fiscal adjustment <sup>3</sup>					0.7	
18	Recommended (maximum) growth in net nationally financed primary expenditure <sup>4</sup> (% change)					2.0	
	Monitoring delivery of the recommended fiscal adjustment for 2024						
19	Growth in net nationally financed primary expenditure (% change)					2.7	
20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					-0.7	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

Table 2.3: Main indicators for fiscal surveillance

#	Variables	2022		2023		2024	
		CP	COM	CP	COM	CP	COM
	Balance-based structural fiscal indicators						
1	Change in the structural balance (pps. of potential GDP)	na.	0.7	-4.5	-1.7	1.0	-0.1
2	Change in the structural primary balance	na.	0.7	-4.4	-1.7	1.4	0.0
		COM		COM		COM	
	Net expenditure-based structural fiscal indicators						
3=4+5	Fiscal stance (including EU-financed expenditure, excluding pandemic-related temporary emergency measures) <sup>1</sup> (% of GDP) of which contribution from:	-1.2		-3.1		0.3	
4	- EU-financed expenditure (including by RRF grants and other EU funds) (pps. of GDP)	0.1		-1.1		0.0	
5=6+7+8	- Nationally financed net primary expenditure	-1.3		-2.0		0.3	
	including,						
6	- Nationally financed net primary current expenditure	-0.8		-1.9		-0.5	
7	- Nationally financed gross fixed capital formation	-0.5		-0.1		0.7	
8	- Nationally financed other capital expenditure	0.0		0.1		0.0	
	p.m.: Energy measures and support to persons fleeing Ukraine (% of GDP)						
9	Change in total net budgetary cost of energy measures <sup>2</sup>	0.9		-0.7		-0.7	
10	Change in net budgetary cost of targeted energy support measures (current expenditure)	0.0		0.0		0.0	
11	Change in budgetary cost of support to persons fleeing Ukraine (current expenditure)	0.1		0.0		0.0	
	p.m.: Pandemic-related measures (% of GDP)						
12	Change in total budgetary cost of pandemic-related temporary emergency measures	-2.7		-1.0		0.0	
	Background structural fiscal indicators						
13	Structural balance in 2023 (% of potential GDP)					-5.0	
14	Medium-term budgetary objective (MTO)					-1.0	
15	At or above MTO at the start of the year?					No	
16=14-13	Distance to MTO (pps. of potential GDP)					4.0	
	Setting the recommended fiscal adjustment for 2024						
17	Recommended (minimum) fiscal adjustment <sup>3</sup>					0.5	
18	Recommended (maximum) growth in net nationally financed primary expenditure <sup>4</sup> (% change)					4.6	
	Monitoring delivery of the recommended fiscal adjustment for 2024						
19	Growth in net nationally financed primary expenditure (% change)					5.4	
20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					-0.8	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

	p.m.: Pandemic-related measures (% of GDP)						
12	Change in total budgetary cost of pandemic-related temporary emergency measures	-1.9		-0.1		0.0	
	Background structural fiscal indicators						
13	Structural balance in 2023 (% of potential GDP)					-2.7	
14	Medium-term budgetary objective (MTO)					-0.75	
15	At or above MTO at the start of the year?					No	
16=14-13	Distance to MTO (pps. of potential GDP)					2.0	
	Setting the recommended fiscal adjustment for 2024						
17	Recommended (minimum) fiscal adjustment <sup>3</sup>					0.5	
18	Recommended (maximum) growth in net nationally financed primary expenditure <sup>4</sup> (% change)					6.0	
	Monitoring delivery of the recommended fiscal adjustment for 2024						
19	Growth in net nationally financed primary expenditure (% change)					3.0	
20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					3.0	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

	Background structural fiscal indicators						
13	Structural balance in 2023 (% of potential GDP)					-2.0	
14	Medium-term budgetary objective (MTO)					-0.5	
15	At or above MTO at the start of the year?					No	
16=14-13	Distance to MTO (pps. of potential GDP)					1.5	
	Setting the recommended fiscal adjustment for 2024						
17	Recommended (minimum) fiscal adjustment <sup>3</sup>					0.3	
18	Recommended (maximum) growth in net nationally financed primary expenditure <sup>4</sup> (% change)					2.5	
	Monitoring delivery of the recommended fiscal adjustment for 2024						
19	Growth in net nationally financed primary expenditure (% change)					2.4	
20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					0.1	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

7	- Inflation effect	-1.3	na.	-3.5	na.	-3.8	na.	-1.5	na.	na.
8	'Stock-flow' adjustment	1.2	-5.6	-0.8	-2 ¾	0.6	-2 ¾	0.0	-1 ¼	-1 ½

<sup>1</sup> End of period.

<sup>2</sup> The 'snow-ball' effect captures the impact of interest expenditure on accumulated general government debt, as well as the impact of real GDP growth and inflation on the general government debt-to-GDP ratio (through the denominator). The 'stock-flow adjustment' includes differences in cash and accrual accounting (including leads and lags in the disbursement of EU funds), accumulation of financial assets, and valuation and other residual effects.

Table 7.3: Main indicators for fiscal surveillance

#	Variables	2022		2023		2024	
		SP	COM	SP	COM	SP	COM
	Balance-based structural fiscal indicators						
1	Change in the structural balance (pps. of potential GDP)	na.	0.9	0.0	0.7	0.7	1.1
2	Change in the structural primary balance	na.	0.8	0.0	0.7	0.7	1.1
		COM		COM		COM	
	Net expenditure-based structural fiscal indicators						
3=4+5	Fiscal stance (including EU-financed expenditure, excluding pandemic-related temporary emergency measures) <sup>1</sup> (% of GDP) of which contribution from:	-0.2		0.2		1.4	
4	- EU-financed expenditure (including by RRF grants and other EU funds) (pps. of GDP)	0.1		0.0		0.0	
5=6+7+8	- Nationally financed net primary expenditure including,	-0.3		0.2		1.4	
6	- Nationally financed net primary current expenditure	-0.2		0.3		1.3	
7	- Nationally financed gross fixed capital formation	-0.1		0.0		0.1	
8	- Nationally financed other capital expenditure	0.0		-0.1		0.1	
	p.m.: Energy measures and support to persons fleeing Ukraine (% of GDP)						
9	Change in total net budgetary cost of energy measures <sup>2</sup>	0.5		-0.1		-0.3	
10	Change in net budgetary cost of targeted energy support measures (current expenditure)	0.2		-0.1		-0.1	
11	Change in budgetary cost of support to persons fleeing Ukraine (current expenditure)	0.1		0.1		-0.1	
	p.m.: Pandemic-related measures (% of GDP)						
12	Change in total budgetary cost of pandemic-related temporary emergency measures	-2.1		-0.7		0.0	
	Background structural fiscal indicators						
13	Structural balance in 2023 (% of potential GDP)					-0.1	
14	Medium-term budgetary objective (MTO)					-0.5	
15	At or above MTO at the start of the year?					Yes	
16=14-13	Distance to MTO (pps. of potential GDP)					na.	
	Setting the recommended fiscal adjustment for 2024						
17	Recommended (minimum) fiscal adjustment <sup>3</sup>					na.	
18	Recommended (maximum) growth in net nationally financed primary expenditure <sup>4</sup> (% change)					na.	
	Monitoring delivery of the recommended fiscal adjustment for 2024						
19	Growth in net nationally financed primary expenditure (% change)					1.9	
20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					na.	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

6	- Nationally financed net primary current expenditure	-0.6		0.3		1.2	
7	- Nationally financed gross fixed capital formation	-0.6		0.0		-0.3	
8	- Nationally financed other capital expenditure	0.0		-0.1		0.2	
	p.m.: Energy measures and support to persons fleeing Ukraine (% of GDP)						
9	Change in total net budgetary cost of energy measures <sup>2</sup>	2.0		-2.3		-0.2	
10	Change in net budgetary cost of targeted energy support measures (current expenditure)	0.3		-0.4		0.0	
11	Change in budgetary cost of support to persons fleeing Ukraine (current expenditure)	0.0		0.0		0.0	
	p.m.: Pandemic-related measures (% of GDP)						
12	Change in total budgetary cost of pandemic-related temporary emergency measures	-5.1		-1.5		0.0	
	Background structural fiscal indicators						
13	Structural balance in 2023 (% of potential GDP)					-1.5	
14	Medium-term budgetary objective (MTO)					0.5	
15	At or above MTO at the start of the year?					No	
16=14-13	Distance to MTO (pps. of potential GDP)					2.0	
	Setting the recommended fiscal adjustment for 2024						
17	Recommended (minimum) fiscal adjustment <sup>3</sup>					0.3	
18	Recommended (maximum) growth in net nationally financed primary expenditure <sup>4</sup> (% change)					2.6	
	Monitoring delivery of the recommended fiscal adjustment for 2024						
19	Growth in net nationally financed primary expenditure (% change)					0.7	
20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					2.0	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

2=3+4+8	Change in the ratio (pps. of GDP)	2.8	-23.3	-23.3	-8.7	-11.0	-11.8	-5.8	-8.1	-7.4
	Contributions <sup>2</sup> :									
3	Primary balance	-0.1	-0.1	-0.1	-1.1	-1.9	-2.1	-2.5	-2.3	-2.5
4=5+6+7	'Snow-ball' effect	1.4	-22.2	-22.2	-7.6	-8.3	-4.5	-4.3	-4.4	-3.0
	of which:									
5	- Interest expenditure	3.0	2.4	2.4	2.9	3.2	2.9	3.2	2.8	2.6
6	- Growth effect	-1.2	-10.0	-10.0	-3.7	-3.9	-4.7	-3.0	-4.3	-2.9
7	- Inflation effect	-0.3	-13.8	-13.8	-6.6	-7.5	-2.7	-4.4	-2.8	-2.7
8	'Stock-flow' adjustment	1.5	-0.9	-0.9	0.0	-0.8	-5.2	1.0	-1.5	-1.9

<sup>1</sup> End of period.

<sup>2</sup> The 'snow-ball' effect captures the impact of interest expenditure on accumulated general government debt, as well as the impact of real GDP growth and inflation on the general government debt-to-GDP ratio (through the denominator). The 'stock-flow adjustment' includes differences in cash and accrual accounting (including leads and lags in the disbursement of EU funds), accumulation of financial assets, and valuation and other residual effects.

	Monitoring delivery of the recommended fiscal adjustment for 2024						
19	Growth in net nationally financed primary expenditure (% change)					1.4	
20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					1.2	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

Table 11.3: Main indicators for fiscal surveillance

#	Variables	2022		2023		2024	
		SP	COM	SP	COM	SP	COM
	Balance-based structural fiscal indicators						
1	Change in the structural balance (pps. of potential GDP)	na.	1.9	-0.7	-0.3	-0.7	-0.5
2	Change in the structural primary balance	na.	1.7	-0.8	-0.5	-0.8	-0.6
		COM		COM		COM	
	Net expenditure-based structural fiscal indicators						
3=4+5	Fiscal stance (including EU-financed expenditure, excluding pandemic-related temporary emergency measures) <sup>1</sup> (% of GDP) of which contribution from:	0.2		-1.0		0.0	
4	- EU-financed expenditure (including by RRF grants and other EU funds) (pps. of GDP)	0.0		-0.4		0.4	
5=6+7+8	- Nationally financed net primary expenditure	0.3		-0.6		-0.4	
	including,						
6	- Nationally financed net primary current expenditure	0.1		-0.4		0.5	
7	- Nationally financed gross fixed capital formation	0.6		-0.7		-0.4	
8	- Nationally financed other capital expenditure	-0.5		0.5		-0.6	
	p.m.: Energy measures and support to persons fleeing Ukraine (% of GDP)						
9	Change in total net budgetary cost of energy measures <sup>2</sup>	1.6		-0.1		-1.3	
10	Change in net budgetary cost of targeted energy support measures (current expenditure)	0.3		-0.1		-0.2	
11	Change in budgetary cost of support to persons fleeing Ukraine (current expenditure)	0.1		0.0		0.0	
	p.m.: Pandemic-related measures (% of GDP)						
12	Change in total budgetary cost of pandemic-related temporary emergency measures	-1.2		-0.1		0.0	
	Background structural fiscal indicators						
13	Structural balance in 2023 (% of potential GDP)					-1.3	
14	Medium-term budgetary objective (MTO)					-1.0	
15	At or above MTO at the start of the year?					No	
16=14-13	Distance to MTO (pps. of potential GDP)					0.3	
	Setting the recommended fiscal adjustment for 2024						
17	Recommended (minimum) fiscal adjustment <sup>3</sup>					0.3	
18	Recommended (maximum) growth in net nationally financed primary expenditure <sup>4</sup> (% change)					5.1	
	Monitoring delivery of the recommended fiscal adjustment for 2024						
19	Growth in net nationally financed primary expenditure (% change)					6.8	
20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					-1.8	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

1	Gross debt ratio <sup>1</sup> (% of GDP)	77.2	68.4	68.4	62.6	63.0	59.8	61.8	57.5	55.6
2=3+4+8	Change in the ratio (pps. of GDP)	-0.3	-10.0	-10.0	-5.8	-5.4	-2.8	-1.1	-2.3	-1.9
	Contributions <sup>2</sup> :									
3	Primary balance	-0.3	-1.8	-1.8	-0.6	-0.7	0.3	0.2	-0.5	-0.7
4=5+6+7	'Snow-ball' effect	-1.1	-9.3	-9.3	-5.1	-4.6	-2.5	-2.1	-1.8	-1.3
	of which:									
5	- Interest expenditure	2.1	1.4	1.4	1.3	1.2	1.3	1.2	1.2	1.3
6	- Growth effect	-2.1	-4.3	-4.2	-1.4	-1.0	-1.6	-1.3	-1.4	-1.2
7	- Inflation effect	-1.2	-6.0	-6.1	-4.9	-4.7	-2.2	-1.9	-1.5	-1.3
8	'Stock-flow' adjustment	1.2	1.1	1.1	-0.1	-0.1	-0.5	0.8	0.0	0.0

<sup>1</sup> End of period.

<sup>2</sup> The 'snow-ball' effect captures the impact of interest expenditure on accumulated general government debt, as well as the impact of real GDP growth and inflation on the general government debt-to-GDP ratio (through the denominator). The 'stock-flow adjustment' includes differences in cash and accrual accounting (including leads and lags in the disbursement of EU funds), accumulation of financial assets, and valuation and other residual effects.

<sup>1</sup> In the table, the figures related to the Stability Programme correspond to the budgetary projections as reported by Italy. Except for the overall general government deficit and debt figures, those projections do not take into account the fiscal package announced by Italy. This package, adopted on 1 May 2023, included, among others, fiscal policy measures to reduce the labour tax wedge in 2023.

Table 12.3: Main indicators for fiscal surveillance

#	Variables	2022		2023		2024	
		SP	COM	SP	COM	SP	COM
	Balance-based structural fiscal indicators						
1	Change in the structural balance (pps. of potential GDP)	na.	-0.2	3.6	3.3	0.8	0.9
2	Change in the structural primary balance	na.	0.5	2.9	2.9	1.2	1.0
		COM		COM		COM	
	Net expenditure-based structural fiscal indicators						
3=4+5	Fiscal stance (including EU-financed expenditure, excluding pandemic-related temporary emergency measures) <sup>1</sup> (% of GDP) of which contribution from:	-3.2		2.6		1.7	
4	- EU-financed expenditure (including by RRF grants and other EU funds) (pps. of GDP)	-0.4		-0.5		0.6	
5=6+7+8	- Nationally financed net primary expenditure	-2.8		3.2		1.1	
	including,						
6	- Nationally financed net primary current expenditure	-2.4		0.9		1.3	
7	- Nationally financed gross fixed capital formation	0.0		-0.1		-0.4	
8	- Nationally financed other capital expenditure	-0.3		2.3		0.2	
	p.m.: Energy measures and support to persons fleeing Ukraine (% of GDP)						
9	Change in total net budgetary cost of energy measures <sup>2</sup>	2.2		-1.5		-1.0	
10	Change in net budgetary cost of targeted energy support measures (current expenditure)	1.2		-0.6		-0.7	
11	Change in budgetary cost of support to persons fleeing Ukraine (current expenditure)	0.1		0.0		0.0	
	p.m.: Pandemic-related measures (% of GDP)						
12	Change in total budgetary cost of pandemic-related temporary emergency measures	-2.3		-1.1		0.0	
	Background structural fiscal indicators						
13	Structural balance in 2023 (% of potential GDP)					-5.3	
14	Medium-term budgetary objective (MTO)					0.25	
15	At or above MTO at the start of the year?					No	
16=14-13	Distance to MTO (pps. of potential GDP)					5.6	
	Setting the recommended fiscal adjustment for 2024						
17	Recommended (minimum) fiscal adjustment <sup>3</sup>					0.7	
18	Recommended (maximum) growth in net nationally financed primary expenditure <sup>4</sup> (% change)					1.3	
	Monitoring delivery of the recommended fiscal adjustment for 2024						
19	Growth in net nationally financed primary expenditure (% change)					0.8	
20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					0.6	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

Table 12.4: General government debt developments

#	Variables	Average 2017-2021	2022		2023		2024		2025	2026
			SP	COM	SP	COM	SP	COM	SP	SP
1	Gross debt ratio <sup>1</sup> (% of GDP)	141.5	144.4	144.4	142.1	140.4	141.4	140.3	140.9	140.4
2=3+4+8	Change in the ratio (pps. of GDP)	3.0	-5.5	-5.5	-2.3	-4.0	-0.7	-0.1	-0.5	-0.5
	Contributions <sup>2</sup> :									
3	Primary balance	1.4	3.6	3.6	0.8	0.5	-0.3	-0.5	-1.2	-2.0
4=5+6+7	'Snow-ball' effect	2.0	-5.1	-5.2	-4.1	-5.7	-1.9	-1.0	-0.4	0.3
	of which:									
5	- Interest expenditure	3.6	4.4	4.4	3.7	4.0	4.1	4.1	4.2	4.5
6	- Growth effect	-0.2	-5.2	-5.2	-1.4	-1.6	-2.0	-1.5	-1.8	-1.5
7	- Inflation effect	-1.3	-4.2	-4.2	-6.5	-7.9	-3.8	-3.6	-2.8	-2.7
8	'Stock-flow' adjustment	-0.4	-3.9	-3.9	1.1	1.2	1.4	1.4	1.1	1.3

<sup>1</sup> End of period.

<sup>2</sup> The 'snow-ball' effect captures the impact of interest expenditure on accumulated general government debt, as well as the impact of real GDP growth and inflation on the general government debt-to-GDP ratio (through the denominator). The 'stock-flow adjustment' includes differences in cash and accrual accounting (including leads and lags in the disbursement of EU funds), accumulation of financial assets, and valuation and other residual effects.

Table 14.3: Main indicators for fiscal surveillance

#	Variables	2022		2023		2024	
		SP	COM	SP	COM	SP	COM
	Balance-based structural fiscal indicators						
1	Change in the structural balance (pps. of potential GDP)	na.	2.5	-0.4	0.8	0.0	0.9
2	Change in the structural primary balance	na.	2.5	-0.3	0.9	0.2	1.1
		COM		COM		COM	
	Net expenditure-based structural fiscal indicators						
3=4+5	Fiscal stance (including EU-financed expenditure, excluding pandemic-related temporary emergency measures) <sup>1</sup> (% of GDP) of which contribution from:	0.0		-0.9		0.6	
4	- EU-financed expenditure (including by RRF grants and other EU funds) (pps. of GDP)	0.2		-1.1		-0.7	
5=6+7+8	- Nationally financed net primary expenditure	-0.2		0.1		1.3	
	including,						
6	- Nationally financed net primary current expenditure	0.3		-0.5		1.7	
7	- Nationally financed gross fixed capital formation	1.2		-1.0		-0.4	
8	- Nationally financed other capital expenditure	-1.7		1.7		0.0	
	p.m.: Energy measures and support to persons fleeing Ukraine (% of GDP)						
9	Change in total net budgetary cost of energy measures <sup>2</sup>	1.4		-0.5		-1.0	
10	Change in net budgetary cost of targeted energy support measures (current expenditure)	0.5		-0.4		-0.1	
11	Change in budgetary cost of support to persons fleeing Ukraine (current expenditure)	0.2		0.1		0.0	
	p.m.: Pandemic-related measures (% of GDP)						
12	Change in total budgetary cost of pandemic-related temporary emergency measures	-3.8		-1.2		0.0	
	Background structural fiscal indicators						
13	Structural balance in 2023 (% of potential GDP)					-3.5	
14	Medium-term budgetary objective (MTO)					-1.0	
15	At or above MTO at the start of the year?					No	
16=14-13	Distance to MTO (pps. of potential GDP)					2.5	
	Setting the recommended fiscal adjustment for 2024						
17	Recommended (minimum) fiscal adjustment <sup>3</sup>					0.5	
18	Recommended (maximum) growth in net nationally financed primary expenditure <sup>4</sup> (% change)					3.0	
	Monitoring delivery of the recommended fiscal adjustment for 2024						
19	Growth in net nationally financed primary expenditure (% change)					1.3	
20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					1.6	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

Table 15.3: Main indicators for fiscal surveillance

#	Variables	2022		2023		2024	
		SP	COM	SP	COM	SP	COM
	Balance-based structural fiscal indicators						
1	Change in the structural balance (pps. of potential GDP)	na.	1.1	-0.4	-0.2	0.0	0.3
2	Change in the structural primary balance	na.	1.1	-0.3	-0.1	0.1	0.5
		COM		COM		COM	
	Net expenditure-based structural fiscal indicators						
3=4+5	Fiscal stance (including EU-financed expenditure, excluding pandemic-related temporary emergency measures) <sup>1</sup> (% of GDP) of which contribution from:	0.9		-0.8		1.4	
4	- EU-financed expenditure (including by RRF grants and other EU funds) (pps. of GDP)	0.2		-0.8		0.2	
5=6+7+8	- Nationally financed net primary expenditure including,	0.6		0.1		1.2	
6	- Nationally financed net primary current expenditure	0.9		0.4		1.2	
7	- Nationally financed gross fixed capital formation	0.0		-0.1		-0.1	
8	- Nationally financed other capital expenditure	-0.2		-0.2		0.2	
	p.m.: Energy measures and support to persons fleeing Ukraine (% of GDP)						
9	Change in total net budgetary cost of energy measures <sup>2</sup>	1.3		-0.7		-0.6	
10	Change in net budgetary cost of targeted energy support measures (current expenditure)	0.0		0.0		0.0	
11	Change in budgetary cost of support to persons fleeing Ukraine (current expenditure)	0.3		0.0		0.0	
	p.m.: Pandemic-related measures (% of GDP)						
12	Change in total budgetary cost of pandemic-related temporary emergency measures	-0.2		-0.4		0.0	
	Background structural fiscal indicators						
13	Structural balance in 2023 (% of potential GDP)					-0.6	
14	Medium-term budgetary objective (MTO)					-1.0	
15	At or above MTO at the start of the year?					Yes	
16=14-13	Distance to MTO (pps. of potential GDP)					na.	
	Setting the recommended fiscal adjustment for 2024						
17	Recommended (minimum) fiscal adjustment <sup>3</sup>					na.	
18	Recommended (maximum) growth in net nationally financed primary expenditure <sup>4</sup> (% change)					na.	
	Monitoring delivery of the recommended fiscal adjustment for 2024						
19	Growth in net nationally financed primary expenditure (% change)					2.7	
20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					na.	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

6	- Growth effect	-1.4	-0.7	-0.7	-0.2	-0.2	-1.1	-1.0	-1.1	-1.1
7	- Inflation effect	-1.4	-6.2	-6.2	-3.4	-3.6	-0.8	-1.1	-0.7	-0.7
8	'Stock-flow' adjustment	2.4	1.1	1.1	0.8	0.8	0.2	0.2	2.0	0.5

<sup>1</sup> End of period.

<sup>2</sup> The 'snow-ball' effect captures the impact of interest expenditure on accumulated general government debt, as well as the impact of real GDP growth and inflation on the general government debt-to-GDP ratio (through the denominator). The 'stock-flow adjustment' includes differences in cash and accrual accounting (including leads and lags in the disbursement of EU funds), accumulation of financial assets, and valuation and other residual effects.

	p.m.: Energy measures and support to persons fleeing Ukraine (% of GDP)						
9	Change in total net budgetary cost of energy measures <sup>2</sup>	0.5		0.6		-0.6	
10	Change in net budgetary cost of targeted energy support measures (current expenditure)	0.4		0.3		-0.6	
11	Change in budgetary cost of support to persons fleeing Ukraine (current expenditure)	0.1		0.0		0.0	
	p.m.: Pandemic-related measures (% of GDP)						
12	Change in total budgetary cost of pandemic-related temporary emergency measures	-0.6		-0.1		0.0	
	Background structural fiscal indicators						
13	Structural balance in 2023 (% of potential GDP)					-1.1	
14	Medium-term budgetary objective (MTO)					0.5	
15	At or above MTO at the start of the year?					No	
16=14-13	Distance to MTO (pps. of potential GDP)					1.6	
	Setting the recommended fiscal adjustment for 2024						
17	Recommended (minimum) fiscal adjustment <sup>3</sup>					0.3	
18	Recommended (maximum) growth in net nationally financed primary expenditure <sup>4</sup> (% change)					4.8	
	Monitoring delivery of the recommended fiscal adjustment for 2024						
19	Growth in net nationally financed primary expenditure (% change)					2.9	
20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					2.0	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

Table 18.3: Main indicators for fiscal surveillance

#	Variables	2022		2023		2024	
		SP	COM	SP	COM	SP	COM
	Balance-based structural fiscal indicators						
1	Change in the structural balance (pps. of potential GDP)	na.	1.6	1.1	0.9	0.8	0.7
2	Change in the structural primary balance	na.	1.5	1.4	1.2	1.0	1.0
		COM		COM		COM	
	Net expenditure-based structural fiscal indicators						
3=4+5	Fiscal stance (including EU-financed expenditure, excluding pandemic-related temporary emergency measures) <sup>1</sup> (% of GDP) of which contribution from:	-0.2		0.4		2.3	
4	- EU-financed expenditure (including by RRF grants and other EU funds) (pps. of GDP)	0.2		-0.7		0.8	
5=6+7+8	- Nationally financed net primary expenditure including,	-0.4		1.1		1.5	
6	- Nationally financed net primary current expenditure	-0.9		0.8		1.5	
7	- Nationally financed gross fixed capital formation	0.2		0.3		-0.1	
8	- Nationally financed other capital expenditure	0.3		0.0		0.1	
	p.m.: Energy measures and support to persons fleeing Ukraine (% of GDP)						
9	Change in total net budgetary cost of energy measures <sup>2</sup>	1.9		-0.8		-0.2	
10	Change in net budgetary cost of targeted energy support measures (current expenditure)	0.1		0.0		0.0	
11	Change in budgetary cost of support to persons fleeing Ukraine (current expenditure)	0.1		0.0		0.0	
	p.m.: Pandemic-related measures (% of GDP)						
12	Change in total budgetary cost of pandemic-related temporary emergency measures	-2.4		-0.8		0.0	
	Background structural fiscal indicators						
13	Structural balance in 2023 (% of potential GDP)					-4.6	
14	Medium-term budgetary objective (MTO)					0.0	
15	At or above MTO at the start of the year?					No	
16=14-13	Distance to MTO (pps. of potential GDP)					4.6	
	Setting the recommended fiscal adjustment for 2024						
17	Recommended (minimum) fiscal adjustment <sup>3</sup>					0.5	
18	Recommended (maximum) growth in net nationally financed primary expenditure <sup>4</sup> (% change)					5.9	
	Monitoring delivery of the recommended fiscal adjustment for 2024						
19	Growth in net nationally financed primary expenditure (% change)					3.6	
20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					2.2	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

Table 18.4: General government debt developments

#	Variables	Average 2017-2021	2022		2023		2024		2025	2026
			SP	COM	SP	COM	SP	COM	SP	SP
1	Gross debt ratio <sup>1</sup> (% of GDP)	48.0	53.4	53.4	54.5	54.8	55.7	56.1	56.2	56.1
2=3+4+8	Change in the ratio (pps. of GDP)	0.1	-1.7	-1.7	1.1	1.4	1.3	1.3	0.5	-0.1
	Contributions <sup>2</sup> :									
3	Primary balance	0.9	4.8	4.8	3.8	3.9	2.8	3.1	2.1	1.5
4=5+6+7	'Snow-ball' effect	-2.1	-5.1	-5.1	-3.0	-2.9	-2.4	-2.2	-2.3	-2.2
	of which:									
5	- Interest expenditure	1.4	1.0	1.0	1.2	1.2	1.5	1.5	1.5	1.4
6	- Growth effect	-2.5	-3.4	-3.4	-2.0	-1.9	-2.3	-2.1	-2.4	-2.2
7	- Inflation effect	-0.9	-2.6	-2.6	-2.1	-2.1	-1.5	-1.6	-1.3	-1.4
8	'Stock-flow' adjustment	1.2	-1.4	-1.4	0.3	0.4	0.8	0.5	0.7	0.7

<sup>1</sup> End of period.

<sup>2</sup> The 'snow-ball' effect captures the impact of interest expenditure on accumulated general government debt, as well as the impact of real GDP growth and inflation on the general government debt-to-GDP ratio (through the denominator). The 'stock-flow adjustment' includes differences in cash and accrual accounting (including leads and lags in the disbursement of EU funds), accumulation of financial assets, and valuation and other residual effects.

12	Change in total budgetary cost of pandemic-related temporary emergency measures	-1.5		-0.3		0.0	
	<b>Background structural fiscal indicators</b>						
13	Structural balance in 2023 (% of potential GDP)					-2.7	
14	Medium-term budgetary objective (MTO)					-0.75	
15	<i>At or above MTO at the start of the year?</i>					Nb	
16=14-13	Distance to MTO (pps. of potential GDP)					2.0	
	<b>Setting the recommended fiscal adjustment for 2024</b>						
17	<b>Recommended</b> (minimum) fiscal adjustment <sup>3</sup>					0.3	
18	<b>Recommended</b> (maximum) growth in net nationally financed primary expenditure <sup>4</sup> (% change)					3.5	
	<b>Monitoring delivery of the recommended fiscal adjustment for 2024</b>						
19	<b>Growth</b> in net nationally financed primary expenditure (% change)					1.7	
20=18-19	<b>Difference</b> from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					1.7	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

Table 21.3: Main indicators for fiscal surveillance

#	Variables	2022		2023		2024	
		CP	COM	CP	COM	CP	COM
	Balance-based structural fiscal indicators						
1	Change in the structural balance (pps. of potential GDP)	na.	-28	0.3	0.5	1.4	1.6
2	Change in the structural primary balance	na.	-24	0.8	1.0	1.5	1.6
		COM		COM		COM	
	Net expenditure-based structural fiscal indicators						
3=4+5	Fiscal stance (including EU-financed expenditure, excluding pandemic-related temporary emergency measures) <sup>1</sup> (% of GDP) of which contribution from:	-3.0		-0.8		1.5	
4	- EU-financed expenditure (including by RRF grants and other EU funds) (pps. of GDP)	0.3		-0.8		0.1	
5=6+7+8	- Nationally financed net primary expenditure	-3.3		0.0		1.4	
	including,						
6	- Nationally financed net primary current expenditure	-2.3		-0.8		1.5	
7	- Nationally financed gross fixed capital formation	-0.2		0.2		-0.1	
8	- Nationally financed other capital expenditure	-0.8		0.6		0.1	
	p.m.: Energy measures and support to persons fleeing Ukraine (% of GDP)						
9	Change in total net budgetary cost of energy measures <sup>2</sup>	1.9		-0.2		-1.3	
10	Change in net budgetary cost of targeted energy support measures (current expenditure)	0.1		0.1		-0.1	
11	Change in budgetary cost of support to persons fleeing Ukraine (current expenditure)	0.5		-0.2		0.0	
	p.m.: Pandemic-related measures (% of GDP)						
12	Change in total budgetary cost of pandemic-related temporary emergency measures	-1.7		-0.7		0.0	
	Background structural fiscal indicators						
13	Structural balance in 2023 (% of potential GDP)					-4.5	
14	Medium-term budgetary objective (MTO)					-1.0	
15	At or above MTO at the start of the year?					No	
16=14-13	Distance to MTO (pps. of potential GDP)					3.5	
	Setting the recommended fiscal adjustment for 2024						
17	Recommended (minimum) fiscal adjustment <sup>3</sup>					0.5	
18	Recommended (maximum) growth in net nationally financed primary expenditure <sup>4</sup> (% change)					7.8	
	Monitoring delivery of the recommended fiscal adjustment for 2024						
19	Growth in net nationally financed primary expenditure (% change)					5.6	
20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					2.2	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

Table 22.3: Main indicators for fiscal surveillance

#	Variables	2022		2023		2024	
		SP	COM	SP	COM	SP	COM
	Balance-based structural fiscal indicators						
1	Change in the structural balance (pps. of potential GDP)	na.	0.4	0.4	0.0	0.0	0.0
2	Change in the structural primary balance	na.	0.0	0.7	0.2	0.5	0.6
		COM		COM		COM	
	Net expenditure-based structural fiscal indicators						
3=4+5	Fiscal stance (including EU-financed expenditure, excluding pandemic-related temporary emergency measures) <sup>1</sup> (% of GDP) of which contribution from:	-1.5		-0.7		0.7	
4	- EU-financed expenditure (including by RRF grants and other EU funds) (pps. of GDP)	0.5		-1.0		0.2	
5=6+7+8	- Nationally financed net primary expenditure including,	-2.0		0.3		0.5	
6	- Nationally financed net primary current expenditure	-1.9		0.3		0.5	
7	- Nationally financed gross fixed capital formation	0.1		-0.3		-0.1	
8	- Nationally financed other capital expenditure	-0.2		0.3		0.1	
	p.m.: Energy measures and support to persons fleeing Ukraine (% of GDP)						
9	Change in total net budgetary cost of energy measures <sup>2</sup>	2.0		-1.1		-0.8	
10	Change in net budgetary cost of targeted energy support measures (current expenditure)	1.0		-0.7		-0.3	
11	Change in budgetary cost of support to persons fleeing Ukraine (current expenditure)	0.0		0.0		0.0	
	p.m.: Pandemic-related measures (% of GDP)						
12	Change in total budgetary cost of pandemic-related temporary emergency measures	-1.2		-0.8		0.0	
	Background structural fiscal indicators						
13	Structural balance in 2023 (% of potential GDP)					-0.8	
14	Medium-term budgetary objective (MTO)					-0.5	
15	At or above MTO at the start of the year?					No	
16=14-13	Distance to MTO (pps. of potential GDP)					0.3	
	Setting the recommended fiscal adjustment for 2024						
17	Recommended (minimum) fiscal adjustment <sup>3</sup>					0.3	
18	Recommended (maximum) growth in net nationally financed primary expenditure <sup>4</sup> (% change)					1.8	
	Monitoring delivery of the recommended fiscal adjustment for 2024						
19	Growth in net nationally financed primary expenditure (% change)					2.8	
20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					-1.0	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

	p.m.: Pandemic-related measures (% of GDP)						
12	Change in total budgetary cost of pandemic-related temporary emergency measures	-0.8		0.0		0.0	
	Background structural fiscal indicators						
13	Structural balance in 2023 (% of potential GDP)					-4.3	
14	Medium-term budgetary objective (MTO)					-1.0	
15	At or above MTO at the start of the year?					No	
16=14-13	Distance to MTO (pps. of potential GDP)					3.3	
	Setting the recommended fiscal adjustment for 2024						
17	Recommended (minimum) fiscal adjustment <sup>3</sup>					0.6	
18	Recommended (maximum) growth in net nationally financed primary expenditure <sup>4</sup> (% change)					7.5	
	Monitoring delivery of the recommended fiscal adjustment for 2024						
19	Growth in net nationally financed primary expenditure (% change)					11.0	
20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					-3.5	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

Table 25.3: Main indicators for fiscal surveillance

#	Variables	2022		2023		2024	
		SP	COM	SP	COM	SP	COM
	Balance-based structural fiscal indicators						
1	Change in the structural balance (pps. of potential GDP)	na.	3.5	-3.5	-3.8	0.0	1.3
2	Change in the structural primary balance	na.	3.4	-3.6	-3.8	0.3	1.4
		COM		COM		COM	
	Net expenditure-based structural fiscal indicators						
3=4+5	Fiscal stance (including EU-financed expenditure, excluding pandemic-related temporary emergency measures) <sup>1</sup> (% of GDP) of which contribution from:	1.3		-6.2		2.9	
4	- EU-financed expenditure (including by RRF grants and other EU funds) (pps. of GDP)	0.1		-1.6		1.2	
5=6+7+8	- Nationally financed net primary expenditure including,	1.3		-4.6		1.7	
6	- Nationally financed net primary current expenditure	1.3		-4.4		1.7	
7	- Nationally financed gross fixed capital formation	-0.2		-0.1		-0.1	
8	- Nationally financed other capital expenditure	0.1		-0.1		0.1	
	p.m.: Energy measures and support to persons fleeing Ukraine (% of GDP)						
9	Change in total net budgetary cost of energy measures <sup>2</sup>	0.2		1.8		-2.0	
10	Change in net budgetary cost of targeted energy support measures (current expenditure)	0.2		-0.2		0.0	
11	Change in budgetary cost of support to persons fleeing Ukraine (current expenditure)	0.1		-0.1		0.0	
	p.m.: Pandemic-related measures (% of GDP)						
12	Change in total budgetary cost of pandemic-related temporary emergency measures	-2.4		-0.8		0.0	
	Background structural fiscal indicators						
13	Structural balance in 2023 (% of potential GDP)					-5.8	
14	Medium-term budgetary objective (MTO)					0.25	
15	At or above MTO at the start of the year?					No	
16=14-13	Distance to MTO (pps. of potential GDP)					6.1	
	Setting the recommended fiscal adjustment for 2024						
17	Recommended (minimum) fiscal adjustment <sup>3</sup>					0.7	
18	Recommended (maximum) growth in net nationally financed primary expenditure <sup>4</sup> (% change)					5.7	
	Monitoring delivery of the recommended fiscal adjustment for 2024						
19	Growth in net nationally financed primary expenditure (% change)					3.6	
20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					2.1	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

Table 26.3: Main indicators for fiscal surveillance

#	Variables	2022		2023		2024	
		SP	COM	SP	COM	SP	COM
	Balance-based structural fiscal indicators						
1	Change in the structural balance (pps. of potential GDP)	na.	1.7	-1.1	-1.2	-0.1	-0.1
2	Change in the structural primary balance	na.	1.7	-0.8	-0.9	0.4	0.3
		COM		COM		COM	
	Net expenditure-based structural fiscal indicators						
3=4+5	Fiscal stance (including EU-financed expenditure, excluding pandemic-related temporary emergency measures) <sup>1</sup> (% of GDP) of which contribution from:	-0.1		-1.0		0.4	
4	- EU-financed expenditure (including by RRF grants and other EU funds) (pps. of GDP)	-0.1		-0.1		-0.1	
5=6+7+8	- Nationally financed net primary expenditure	0.0		-0.9		0.4	
	including,						
6	- Nationally financed net primary current expenditure	0.1		-0.6		0.2	
7	- Nationally financed gross fixed capital formation	0.0		-0.4		0.1	
8	- Nationally financed other capital expenditure	-0.2		0.0		0.1	
	p.m.: Energy measures and support to persons fleeing Ukraine (% of GDP)						
9	Change in total net budgetary cost of energy measures <sup>2</sup>	0.1		0.2		-0.3	
10	Change in net budgetary cost of targeted energy support measures (current expenditure)	0.0		0.0		-0.1	
11	Change in budgetary cost of support to persons fleeing Ukraine (current expenditure)	0.1		0.2		0.0	
	p.m.: Pandemic-related measures (% of GDP)						
12	Change in total budgetary cost of pandemic-related temporary emergency measures	-1.7		-0.2		0.0	
	Background structural fiscal indicators						
13	Structural balance in 2023 (% of potential GDP)					-1.8	
14	Medium-term budgetary objective (MTO)					-0.5	
15	At or above MTO at the start of the year?					No	
16=14-13	Distance to MTO (pps. of potential GDP)					1.3	
	Setting the recommended fiscal adjustment for 2024						
17	Recommended (minimum) fiscal adjustment <sup>3</sup>					0.3	
18	Recommended (maximum) growth in net nationally financed primary expenditure <sup>4</sup> (% change)					2.2	
	Monitoring delivery of the recommended fiscal adjustment for 2024						
19	Growth in net nationally financed primary expenditure (% change)					2.8	
20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					-0.6	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

Table 26.4: General government debt developments

#	Variables	Average 2017-2021	2022		2023		2024		2025	2026
			SP	COM	SP	COM	SP	COM	SP	SP
1	Gross debt ratio <sup>1</sup> (% of GDP)	67.7	73.0	73.0	74.4	73.9	76.9	76.2	79.0	80.7
2=3+4+8	Change in the ratio (pps. of GDP)	1.9	0.4	0.4	1.4	0.9	2.5	2.3	2.1	1.7
	Contributions <sup>2</sup> :									
3	Primary balance	1.4	0.3	0.3	1.7	1.7	1.3	1.3	1.8	1.5
4=5+6+7	'Snow-ball' effect	-1.1	-3.9	-3.8	-1.8	-2.4	-1.2	-1.5	-1.6	-1.5
	of which:									
5	- Interest expenditure	0.8	0.5	0.5	0.9	0.8	1.3	1.2	1.3	1.4
6	- Growth effect	-0.8	-1.4	-1.4	0.1	-0.1	-0.9	-1.0	-1.2	-1.2
7	- Inflation effect	-1.0	-2.9	-2.9	-2.9	-3.1	-1.6	-1.7	-1.7	-1.6
8	'Stock-flow' adjustment	1.6	4.0	3.9	1.5	1.5	2.4	2.5	1.9	1.7

<sup>1</sup> End of period.

<sup>2</sup> The 'snow-ball' effect captures the impact of interest expenditure on accumulated general government debt, as well as the impact of real GDP growth and inflation on the general government debt-to-GDP ratio (through the denominator). The 'stock-flow adjustment' includes differences in cash and accrual accounting (including leads and lags in the disbursement of EU funds), accumulation of financial assets, and valuation and other residual effects.

20=18-19	Difference from recommended growth in net nationally financed primary expenditure <sup>5</sup> (pps.)					na.	

<sup>1</sup> The fiscal stance is measured as the change in general government primary expenditure, net of the incremental budgetary impact of discretionary revenue measures and COVID-19 pandemic-related temporary emergency measures, excluding cyclical unemployment expenditure, but including the change in expenditure financed by non-repayable support (grants) from the Recovery and Resilience Facility and other EU funds, relative to the medium-term (10-year) average potential nominal GDP growth rate. A negative (positive) sign indicates an excess (a shortfall) of net primary expenditure growth over medium-term potential GDP growth, corresponding to an expansionary (a contractionary) fiscal stance. For more details, see Box 1 on page 3.

<sup>2</sup> Energy support measures less revenue from new (taxes and levies on) windfall profits by energy producers.

<sup>3</sup> Annual (minimum) improvement in the structural balance towards the medium-term budgetary objective, with a benchmark of 0.5% of GDP, and taking into account fiscal sustainability considerations, as well as, where applicable, the need to reduce the general government deficit to below the Treaty reference value of 3% of GDP. For more details, see Box 1 on page 3.

<sup>4</sup> Corresponding (maximum) growth rate of nationally financed primary expenditure, net of the incremental budgetary impact of discretionary revenue measures, and excluding cyclical unemployment expenditure, consistent with achieving the annual (minimum) improvement in the structural balance towards the medium-term budgetary objective (MTO).

<sup>5</sup> A negative (positive) sign indicates that, assuming unchanged policies, net nationally financed primary expenditure in the Commission 2023 spring forecast is projected to grow at a rate above (below) the recommended growth rate.

Table 27.4: General government debt developments

#	Variables	Average 2017-2021	2022		2023		2024		2025	2026
			CP	COM	CP	COM	CP	COM	CP	CP
1	Gross debt ratio <sup>1</sup> (% of GDP)	38.4	33.0	33.0	31.0	31.4	31.0	30.7	29.8	27.7
2=3+4+8	Change in the ratio (pps. of GDP)	-1.1	-3.5	-3.5	-2.0	-1.5	0.0	-0.7	-1.1	-2.2
	Contributions <sup>2</sup> :									
3	Primary balance	-0.4	-1.2	-1.2	-0.1	0.2	0.1	-0.1	-0.8	-2.0
4=5+6+7	'Snow-ball' effect	-1.3	-2.4	-2.4	-0.8	-0.9	-0.5	-0.3	-0.7	-0.9
	of which:									
5	- Interest expenditure	0.4	0.5	0.5	0.5	0.7	0.6	0.6	0.6	0.6
6	- Growth effect	-0.7	-0.9	-0.9	0.3	0.2	-0.4	-0.3	-0.8	-0.9
7	- Inflation effect	-0.9	-1.9	-1.9	-1.6	-1.8	-0.6	-0.5	-0.5	-0.6
8	'Stock-flow' adjustment	0.5	0.0	0.0	-1.1	-0.8	0.3	-0.4	0.4	0.8

<sup>1</sup> End of period.

<sup>2</sup> The 'snow-ball' effect captures the impact of interest expenditure on accumulated general government debt, as well as the impact of real GDP growth and inflation on the general government debt-to-GDP ratio (through the denominator). The 'stock-flow adjustment' includes differences in cash and accrual accounting (including leads and lags in the disbursement of EU funds), accumulation of financial assets, and valuation and other residual effects.
