Commission proposal	Drafting Suggestions	Comments
(3) The European Green Deal and the Climate law set the target for the EU to become climate neutral by 2050 in a manner that contributes to European competitiveness, growth and jobs. For a decarbonised gas markets to be set up and contribute to the energy transition, significantly higher shares of renewable energy sources in an integrated energy system with an active participation of consumers in competitive markets are needed.		
(4) This Regulation aims to facilitate the penetration of renewable and low-carbon gases into the energy system enabling a shift from fossil gas, and to allow these new gases to play an important role towards achieving the EU's 2030 climate objectives and climate neutrality in 2050. The Regulation aims also to set up a regulatory framework that enables and incentivises all market participants to take the transitional role of fossil gas into account while

Commission proposal	Drafting Suggestions	Comments
planning their activities to avoid lock-in effects and ensure gradual and timely phase-out of fossil gas notably in all relevant industrial sectors and for heating purposes.		
(5) The EU hydrogen strategy recognises that, as EU Member States have different potential for the production of renewable hydrogen, an open and competitive EU market with unhindered cross-border trade has important benefits for competition, affordability, and security of supply. Moreover, it stresses that moving towards a liquid market with commodity-based hydrogen trading would facilitate entry of new producers and be beneficial for deeper integration with other energy carriers. It would create viable price signals for investments and operational decisions. The rules laid down in this Regulation should thus be conducive for hydrogen markets and commodity-based

Commission proposal	Drafting Suggestions	Comments
(8) It is, generally, most efficient to finance infrastructure by revenues obtained from the users of that infrastructure and to avoid cross-subsidies. Moreover, such cross-subsidies would, in the case of regulated assets, be incompatible with the general principle of cost-reflective tariffs. In exceptional cases, such cross-subsidies could nonetheless bring societal benefits, in particular during earlier phases of network development where booked capacity is low compared to technical capacity and uncertainty as to when future capacity demand will materialise is significant. Cross-subsidies could therefore contribute to reasonable and predictable tariffs for early network users and de-risk investments for network operators. Cross-subsidies could thus contribute to an investment climate supportive to the Union's, decarbonisation objectives. Cross-subsidies should not be financed by network users in other

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Commission proposal	Drafting Suggestions	Comments
Member States, regardless as to whether directly or indirectly. It is thus appropriate to collect financing for cross-subsidies only from exit points to final customers within the same Member State. Moreover, as cross-subsidies are exceptional, it should be ensured that they are proportional, transparent, limited in time and set under regulatory supervision.		
↓ 715/2009 recital 8		
In calculating tariffs for access to networks, it is important to take account of the actual costs incurred, insofar as such costs correspond to those of an efficient and structurally comparable network operator, and are transparent, as well as of the need to provide appropriate return on investments and incentives to construct new infrastructure, including special regulatory treatment for new investments as provided for in Directive 2009/73/EC. In that respect, and in		

Proposal for Gas Regulation

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Commission proposal	Drafting Suggestions	Comments
particular if effective pipeline-to-pipeline competition exists, the benchmarking of tariffs by the regulatory authorities will be a relevant consideration.		
↓ 715/2009 recital 9 (adapted)		
⇒ new		
(9) The use of market-based arrangements, such as auctions, to determine tariffs has to be compatible with the provisions laid down in ☒ recast Gas Directive as proposed in COM(2021) xxx ☒ Directive 2009/73/EC ⇒ and Commission Regulation (EU) 2017/459 ⇐.		
↓ 715/2009 recital 10 (adapted)		
(10) A common minimum set of third-party access services is necessary to provide a		

Proposal for Gas Regulation

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Commission proposal	Drafting Suggestions	Comments
common minimum standard of access in practice throughout the Community ☒ Union ☒, to ensure that third-party access services are sufficiently compatible and to allow the benefits accruing from a well-functioning internal market in natural gas to be exploited.		
↓ 715/2009 recital 11 (adapted)		
At present, there are obstacles to the sale of gas on equal terms, without discrimination or disadvantage in the Community. In particular, non-discriminatory network access and an equally effective level of regulatory supervision do not yet exist in each Member State, and isolated markets persist.		
↓ new		
(11) Arrangements on third party access should be based on the principles laid down in		

Proposal for Gas Regulation

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Commission proposal	Drafting Suggestions	Comments
this Regulation. The organisation of entry-exit systems, which enable a free allocation of gas on the basis of firm capacity, was welcomed by the XXIV. Madrid Forum already in October 2013. Therefore a definition of entry-exit system should be introduced and the integration of the distribution system level in the balancing zone be ensured, which would help to achieve a level playing field for renewable and low carbon gases connected to either the transmission or distribution level. Tariff setting of distribution system operators and the organisation of capacity allocation between the transmission and distribution system should be left to the regulatory authorities on the basis of the principles enshrined in [recast Gas Directive as proposed in COM(2021) xxx].		
(12) Access to the entry-exit system should be generally based on firm capacity. Network operators should be required to cooperate in a

Commission proposal	Drafting Suggestions	Comments
way that maximises the offer of firm capacity, which in turn enables network users to freely allocate the gas entering or exiting on the basis of firm capacity to any entry or exit point in the same entry-exit system.		
(13) Conditional capacity should only be offered when network operators are not able to offer firm capacity. Network operators should define the conditions for conditional capacity on the basis of operational constraints in a transparent and clear manner. The regulatory authority should ensure that the number of conditional capacity products is limited to avoid a fragmentation of the market and to ensure compliance with the principle of providing efficient third-party access.

Commission proposal	Drafting Suggestions	Comments
⇒ new		
(18) To enhance competition through liquid wholesale markets for gas, it is vital that gas can be traded independently of its location in the system. The only way to do this is to give network users the freedom to book entry and exit capacity independently, thereby creating gas transport through zones instead of along contractual paths. ⇒ To ensure the freedom of booking capacity independently at entry and exit points, tariffs set for one entry point should therefore not be related to the tariff set for one exit point, and vice versa offered for these points separately and the tariff should not bundle the entry and exit charge in a single price. ⇐ The preference for entry exit systems to facilitate the development of competition was already expressed by most stakeholders at the 6th Madrid Forum on 30 and 31 October 2002.		

Proposal for Gas Regulation

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Commission proposal	Drafting Suggestions	Comments
Tariffs should not be dependent on the transport route. The tariff set for one or more entry points should therefore not be related to the tariff set for one or more exit points, and vice versa.		
↓ new		
(19) While Commission Regulation (EU) 312/2014 establishing a Network Code on Gas Balancing of Transmission Networks provides rules for setting up technical rules that build up a balancing regime, it leaves various design choices for each balancing regime that is applied in a specific entry-exit system. The combination of choices made lead to a specific balancing regime that is applicable in a specific entry-exit system, which are currently mostly reflecting Member States territories.		
(20) Network users are to bear the responsibility of balancing their inputs against		

Proposal for Gas Regulation

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Commission proposal	Drafting Suggestions	Comments
their off-takes with trading platforms established to better facilitate gas trade between network users. In order to better integrate renewable and low carbon gases within the entry-exit system, the balancing zone should also cover the distribution system level. The virtual trading point should be used to exchange gas between balancing accounts of network users.		
↓ 715/2019 recital 20		
(21) References to harmonised transport contracts in the context of non-discriminatory access to the network of transmission system operators do not mean that the terms and conditions of the transport contracts of a particular system operator in a Member State must be the same as those of another transmission system operator in that Member State or in another Member State, unless

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Commission proposal	Drafting Suggestions	Comments
minimum requirements are set which must be met by all transport contracts.		
↓ 715/2009 recital 21		
There is substantial contractual congestion in the gas networks. The congestion management and capacity allocation principles for new or newly negotiated contracts are therefore based on the freeing-up of unused capacity by enabling network users to sublet or resell their contracted capacities and the obligation of transmission system operators to offer unused capacity to the market, at least on a day-ahead and interruptible basis. Given the large proportion of existing contracts and the need to create a true level playing field between users of new and existing capacity, those principles should be applied to all contracted capacity, including existing contracts.		

Proposal for Gas Regulation

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Commission proposal	Drafting Suggestions	Comments
↓ 715/2019 recital 22		
Although physical congestion of networks is, at present, rarely a problem in the Community, it may become one in the future. It is important, therefore, to provide the basic principle for the allocation of congested capacity in such circumstances.		
↓ 715/2009 recital 23		
Market monitoring undertaken over recent years by the national regulatory authorities and by the Commission has shown that current transparency requirements and rules on access to infrastructure are not sufficient to secure a genuine, well-functioning, open and efficient internal market in gas.		
↓ 715/2019 recital 24

Commission proposal	Drafting Suggestions	Comments
elements, they must be adopted in accordance with the regulatory procedure with scrutiny provided for in Article 5a of Decision 1999/468/EC.		
↴ new		
(32) Member States and the Energy Community Contracting Parties should closely cooperate on all matters concerning the development of an integrated gas trading region and should take no measures that endanger the further integration of natural gas markets or the security of supply of Member States and Contracting Parties.		
(33) Transmission system operators could be allowed to reserve storages for natural gas exclusively for carrying out their functions and for the purpose of security of supply. The filling of these strategic stocks could be done by means		

Proposal for Gas Regulation

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Commission proposal	Drafting Suggestions	Comments
of joint purchasing using the trading platform as mentioned in Article 10 of Commission Regulation (EU) No 312/2014 without prejudice to Union competition rules. Withdrawal of natural gas should only be possible for the transmission system operators to carry out their functions or in case of a declared emergency situation, as mentioned in Article 11 (1) of that Regulation, in order not to interfere with the regular functioning of the market.		
(34) Where a regional markets integration is undertaken, the relevant transmission system operators and regulatory authorities should address issues having a cross-border impact such as tariff structures, balancing regime, capacities at remaining cross-border points, investment plans and the fulfilment of transmissions system operators' and regulatory authorities' tasks.

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Commission proposal	Drafting Suggestions	Comments
(35) The energy transition and the continuing integration of the gas market will require further transparency on the allowed or target revenue of the transmission system operator. A number of decisions related to natural gas networks will be based on that information. For example, the transfer of transmission assets from a natural gas network to a hydrogen network or the implementation of an inter-TSO compensation mechanism (ITC) require more transparency than currently exists. In addition, the assessments of tariff evolutions on the long term requires clarity on both natural gas demand and cost projections. Transparency on allowed revenue should enable the latter. Regulatory authorities should, in particular, provide information on the methodology used to calculate the revenues of transmission system operators, the value of their regulatory asset base and its depreciation over time, the value of operational expenditures, the cost of capital		

Proposal for Gas Regulation

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Commission proposal	Drafting Suggestions	Comments
applied to transmission system operators and the incentives and premia applied.		
(36) Transmission system operators' expenditures are predominantly fixed costs. Their business model and the current national regulatory frameworks rely on the assumption of a long-term utilisation of their networks entailing long depreciation periods (30 to 60 years). In the context of the energy transition, regulatory authorities should therefore be able to anticipate gas demand decrease to modify the regulatory arrangements in due time and prevent a situation where the cost recovery of transmission system operators through tariffs threatens the affordability for consumers due to an increasing ratio of fixed costs to gas demand. Where necessary, the depreciation profile or remuneration of transmission assets could, for example, be modified.		

Proposal for Gas Regulation

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Commission proposal	Drafting Suggestions	Comments
(37) Transparency on transmission system operators allowed or target revenue should be increased to enable benchmarking and an assessment by network users. Increased transparency should also facilitate cross-border cooperation and the setting up of ITC mechanisms between operators either for regional integration or for the implementation of tariff discounts for renewable and low carbon gases as set out in this Regulation.		
(38) In order to exploit the most economic locations for the production of renewable and low carbon gases, network users should benefit from discounts in capacity-based transmission tariffs. These should include a discount for injection from renewable and low carbon gases production facilities, a discount for tariffs at entry points from and exit points to storage facilities and a discount on the cross-border tariff and entry points from LNG facilities. In		

Proposal for Gas Regulation

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Commission proposal	Drafting Suggestions	Comments
case of a change of the value of non-cross border discounts, the regulatory authority needs to balance out the interest between networks users and network operators taking into account stable financial frameworks specifically for existing investments, in particular for renewable production facilities. Where possible, indicators or conditions for changing the discount should be provided sufficiently before any decision to change the discount is taken. This discount should not affect the general tariff setting methodology, but should be provided ex-post on the relevant tariff. In order to benefit from the discount, network users should present the required information towards the transmission system operator on the basis of a certificate which would be linked to the union database.		
(39) Revenue decreases from the application of discounts shall be treated as general revenue decreases, e.g. from reduced capacity sales and

Commission proposal	Drafting Suggestions	Comments
need to be recovered via tariffs in a timely manner, for instance by an increase of the specific tariffs following the general rules contained in Article 15 of this Regulation. The Commission should be empowered to change the discount levels via delegated acts to mitigate structural imbalances of revenues for transmission system operators.		
(40) In order to increase efficiencies in the natural gas distribution networks in the Union and to ensure close cooperation with transmission system operators and the ENTSO for Gas, an entity of distribution system operators in the Union ('EU DSO entity') should be provided for which also includes natural gas distribution system operators. The tasks of the EU DSO entity should be well-defined and its working method should ensure efficiency, transparency and representativeness among Union distribution system operators. The

Commission proposal	Drafting Suggestions	Comments
EU DSO entity should closely cooperate with the ENTSO for Gas on the preparation and implementation of the network codes where applicable and should work on providing guidance on the integration inter alia of distributed generation and other areas, which relate to the management of distribution networks.		
(41) Distribution system operators have an important role to play when it comes to the integration of renewable and low carbon gases into the system, as for example about half of the biomethane production capacity is connected to the distribution grid. In order to facilitate the participation of these gases in the wholesale market, production facilities connected to the distribution grid in all Member States should have access to the virtual trading point. Furthermore in accordance with the provisions of this Regulation distribution system operators		

Proposal for Gas Regulation

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Commission proposal	Drafting Suggestions	Comments
and transmission system operates should work together to enable reverse flows from the distribution to the transmission network or to ensure the integration of the distribution system through alternative means, equivalent in effect, to facilitate the market integration of renewable and low carbon gases.		
(42) The integration of growing volumes of renewable and low-carbon gases in the European natural gas system will change the quality of natural gas transported and consumed in Europe. To ensure unhindered cross-border flow of natural gas, maintain the interoperability of markets and enable market integration, it is necessary to increase transparency on gas quality and on the costs of its management, provide for a harmonised approach on the roles and responsibilities of regulatory authorities and system operators and reinforce cross-border coordination. While ensuring a harmonised

Commission proposal	Drafting Suggestions	Comments
approach on gas quality for cross-border interconnection points, Member States' flexibility as regards the application of gas quality standards in their domestic natural gas systems should be maintained.		
(43) The blending of hydrogen into the natural gas system is less efficient compared to using hydrogen in its pure form and diminishes the value of hydrogen. It also affects the operation of gas infrastructure, end-user applications, and the interoperability of cross-border systems. The Member States' decision on whether to apply blending hydrogen in their national natural gas systems should be preserved. At the same time, a harmonised approach on blending hydrogen into the natural gas system in the form of a Union-wide allowed cap at cross-border interconnection points between Union Member States, where transmission system operators have to accept

Commission proposal	Drafting Suggestions	Comments
provision; data exchange, and reporting on gas quality; transparency, communication, information provision and cooperation among relevant market participants.		
(47) In order to ensure optimal management of the Union hydrogen network and to allow trading and supplying hydrogen across borders in the Union, a European Network of Network Operators for Hydrogen (‘ENNOH’) should be established. The tasks of the ENNOH should be carried out in compliance with Union competition rules. The tasks of the ENNOH should be well-defined and its working method should ensure efficiency, transparency and the representative nature of the ENNOH. The network codes prepared by ENNOH should not replace the necessary national network codes for non cross-border issues.		

Proposal for Gas Regulation

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Commission proposal	Drafting Suggestions	Comments
(48) Until the ENNOH is established, a temporary platform should be set up under the lead of the Commission with the involvement of ACER and all relevant market participants, including the ENTSO for Gas, the ENTSO for Electricity and the EU DSO entity. This platform should support early work on scoping and developing issues relevant for the building up of the hydrogen network and markets without formal decision-making powers. The platform should be dissolved once ENNOH is established. Until the ENNOH is established, the ENTSO for Gas will be responsible for the development of Union-wide network development plans, including hydrogen networks.		
(49) In order to ensure transparency regarding the development of the hydrogen network in the Union, the ENNOH should establish, publish and regularly update a non-

CHAPTER II		
GENERAL RULES APPLICABLE TO THE NATURAL GAS AND HYDROGEN SYSTEMS		
Section 1		
General rules for the organisation of the markets and infrastructure access		
Article 3		
General principles		
Member States, regulatory authorities, transmission system operators, distribution system operators, storage operators, LNG operators, hydrogen system operators, and delegated operators such as market area operators or booking platform operators shall		

Proposal for Gas Regulation

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Commission proposal	Drafting Suggestions	Comments
ensure that gases markets are operated in accordance with the following principles:		
(a) prices for gases shall be formed on the basis of demand and supply;		
(b) transmission and distribution system operators shall cooperate with each other to provide network users with the freedom to book entry and exit capacity independently. Gas shall be transported through the entry-exit system instead of along contractual paths;		
(c) tariffs charged at the entry and exit points shall be structured in such a way as to contribute to market integration, enhancing security of supply and promoting the interconnection between gas networks;		

Proposal for Gas Regulation

Commission proposal	Drafting Suggestions	Comments
(d) undertakings active in the same entry-exit system shall exchange gas at the virtual trading point;		
(e) network users shall be responsible to balance their balancing portfolios in order to minimise the need for transmission system operators to undertake balancing actions;		
(f) balancing actions shall be performed on the basis of standardized products and conducted on a trading platform;		
(g) market rules shall avoid actions which prevent price formation on the basis of demand and supply for gases;		
(h) market rules shall foster the emergence and functioning of liquid trading for gases, fostering price formation and price transparency;		

Proposal for Gas Regulation

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Commission proposal	Drafting Suggestions	Comments
(i) market rules shall enable the decarbonisation of the natural gas and hydrogen systems, including by enabling the integration into the market of gases of gas from renewable energy sources and by providing incentives for energy efficiency;		
(j) market rules shall deliver appropriate investment incentives, in particular for long-term investments in a decarbonised and sustainable gas system, for energy storage, energy efficiency and demand response to meet market needs, and shall facilitate fair competition and security of supply;		
(k) barriers to cross-border gas flows, if existing, between entry-exit systems shall be removed;

Article 39		
Cross-border coordination on hydrogen quality		
1. Hydrogen network operators shall cooperate to avoid restrictions to cross-border flows of hydrogen due to hydrogen quality differences.		
2. Where a restriction to cross-border flows due to differences in hydrogen quality cannot be avoided by the concerned hydrogen network operators in their standard operations, they shall inform the concerned regulatory authorities without delay. The information shall include a description and justified reasoning for any steps already taken by the hydrogen network operators.

Penalties		
↓ new		
1. Member States shall lay down the rules on penalties applicable to infringements of this Regulation, the network codes and guidelines adopted pursuant to Articles 52 to 56 and the guidelines laid down in Annex I of this Regulation and shall take all measures necessary to ensure that they are implemented. The penalties provided for shall be effective, proportionate and dissuasive. Member States shall, without delay, notify the Commission of those rules and of those measures and shall notify it without delay of any subsequent amendment affecting them.

2. The Commission may, by decision, impose on undertakings fines not exceeding 1 % of the total turnover in the preceding business year where, intentionally or negligently, those undertakings supply incorrect, incomplete or misleading information in response to a request made pursuant to Article 58(4) or fail to supply information within the time-limit set in a decision adopted pursuant to Article 58(6), first subparagraph. In setting the amount of a fine, the Commission shall have regard to the gravity of the failure to comply with the requirements referred to in paragraph 1 of this Article.		
3. The penalties provided for pursuant to paragraph 1 and any decisions taken pursuant to paragraph 2 shall not be of a criminal law nature.

Chapter V		
Final provisions		
↴ new		
Article 60		
New natural gas and hydrogen infrastructure		
1. Major new natural gas infrastructure, that is to say interconnectors, LNG and storage facilities, may, upon request, be exempted, for a defined period of time, from the provisions of this Regulation as well as from Articles, 28, 27, 29, 54 and Article 72(7), (9) and 73(1) of

Commission proposal	Drafting Suggestions	Comments
[recast Gas Directive]. Major new hydrogen infrastructure, that is to say interconnectors, hydrogen terminals and underground hydrogen storage may, upon request, be exempted, for a defined period of time, from the provisions of Articles 62, 31, 32, 33 of [recast Gas Directive] and Article 15 of this Regulation. The following conditions apply:		
(a) the investment enhances competition in gas supply or hydrogen supply and enhance security of supply;		
(b) the investment contributes to decarbonisation;		
(c) the level of risk attached to the investment is such that the investment would not take place unless an exemption was granted;

Commission proposal	Drafting Suggestions	Comments
(d) the infrastructure is owned by a natural or legal person which is separate at least in terms of its legal form from the system operators in whose systems that infrastructure will be built;		
(e) charges are levied on users of that infrastructure; and		
(f) the exemption is not detrimental to competition in the relevant markets which are likely to be affected by the investment, to the effective functioning of the internal market in gas, to the efficient functioning of the regulated systems concerned, to decarbonisation or to security of supply in the Union.		
These conditions should be assessed taking into account the principle of energy solidarity. National authorities should take into account the situation in other affected Member State and

aspects of cross-border gas flows, including rules on common minimum requirements, planning, monitoring, reporting and crisis management.		
3. To develop this delegated act, the Commission shall work closely with the European Union Agency for the Cooperation of Energy Regulators ACER, the Cybersecurity Agency ENISA, the European Network of Transmission System Operators for Gas (ENTSOG) and a limited number of main affected stakeholders, as well as entities with existing competences in cybersecurity, within their own mandate, such as cybersecurity operation centres (SOCs), and computer security incident response teams (CSIRT), as referred to in the Directive on security of network and information systems (NIS 2.0)’		
(12) Article 9 is amended as follows:

‘3. A solidarity measure shall be a last resort measure that shall apply only if the requesting Member State has:		
(a) declared an emergency state under Article 11;		
(b) not been able to cover the deficit in gas supply to its solidarity protected customers despite the application of the measure referred to in Article 11(3);		
(c) exhausted all market-based measures (‘voluntary measures’), all non-market based measures (‘mandatory measures’) and other measures contained in its emergency plan;		
(d) notified an explicit request to the Commission and to the competent authorities of all Member States with which it is connected

either directly or pursuant to paragraph 2 via a third country, accompanied by a description of the implemented measures referred to in point (b) of this paragraph and by the explicit commitment to pay fair and prompt compensation to the Member State providing solidarity in accordance with paragraph 8.		
4. The Member States that receives a request for a solidarity measure shall make such offers on the basis of voluntary demand-side measures as much as and for as long as possible, before resorting to non-market-based measures.		
Where market-based measures prove insufficient for the Member State providing solidarity to address the deficit in gas supply to solidarity protected customers in the requesting Member State, the Member State providing solidarity may introduce non-market-based

measures in order to comply with the obligations laid down in paragraphs 1 and 2.		
5. If there is more than one Member State that could provide solidarity to a requesting Member State, the requesting Member State shall, after consulting all Member States required to provide solidarity, seek the most advantageous offer on the basis of cost, speed of delivery, reliability and diversification of supplies of gas. Should the available market based offers not be enough to cover the deficit in gas supply to the solidarity protected customers in the requesting Member State, the Member States required to provide solidarity shall be obliged to activate non-market based measures.'		
(b) In paragraph 10, the following subparagraph is added:

‘Where a solidarity measure has been provided in accordance with paragraphs 1 and 2, the final amount of the compensation that has been paid by the requesting Member State shall be subject to ex-post control by the Regulatory Authority and/or the Competition Authority of the Providing Member State, within three months of the lifting of the emergency. The Requesting Member State shall be consulted and give its opinion on the conclusion of the ex-post control. Following the consultation with the Requesting Member State, the authority which exercises this ex-post control is entitled to require a rectification of the amount of the compensation, taking into account the opinion of the Requesting Member State. The conclusions of this ex-post control shall be transmitted to the European Commission, which will take them into consideration in its report on the emergency pursuant to Article 14(3).’;

(c) paragraph 14 is replaced by the following:		
‘14. The applicability of this Article shall not be affected if Member States fail to agree or finalise their technical, legal and financial arrangements. In such a situation, where a solidarity measure is needed to guarantee the gas supply to solidarity protected customers, the arrangements contained in (new) Annex IX shall apply by default to the request and provision of the relevant gas. ’;		
(15) In Article 14(3), the first subparagraph is replaced by the following:		
‘After an emergency, the competent authority referred to in paragraph 1 shall, as soon as possible and at the latest six weeks after the lifting of the emergency, provide the Commission with a detailed assessment of the emergency and the effectiveness of the

measures implemented, including an assessment of the economic impact of the emergency, the impact on the electricity sector and the assistance provided to or received from, the Union and its Member States. Where relevant, the assessment shall include a detailed description of the circumstances that led to activating the mechanism in Article 13 and the conditions under which the missing gas supplies were received, including the price and financial compensation paid, and – where relevant – the reasons why the solidarity offers were not accepted and /or gas was not supplied. Such assessment shall be made available to the GCG and shall be reflected in the updates of the preventive action plans and the emergency plans.’
