FLASH Working Party Technical Harmonisation No 2

Working party on Measuring Instruments Directive Monday, 08-09-2025

Dear Colleagues,

The Danish Presidency are pleased to invite you to the second Working Party in Technical Harmonisation on the targeted amendment of the Measuring Instruments Directive on 8 September. The meeting is scheduled as a full day meeting, and will be dedicated to an exchange of views on the revised presidency text as presented in doc XXX/XX.

We would like to thank the delegations for the valuable contributions to the file both at the last meeting and subsequent written comments. The text has been adjusted on the basis of the comments and drafting suggestions received from the delegations. The revised presidency text also includes adjustments in the recitals based on the oral and written contributions during the Polish Presidency.

We would like to draw your attention to the changes to some of the last outstanding issues:

- Article 2(2) - The wording has been adjusted to clarify the legal effects of the article on certificates.
- Annex II - The definition of associated measuring instruments has been deleted and the definition and specific requirements of the devices have been updated. This is done on the basis of the written comments on a compromise regarding gas calorific value determining devices.
- Annex IV - Several delegations have submitted comments on point 4 on operating requirements and the definition of the installer. Based on these comments point 4(b) is adjusted to ensure that cables are

replaceable from the measuring system for EVSE. Requirement and definition of an installer have also been deleted from the text.

- Further in Annex IV, we have introduced putting into use requirements in point 7 based on suggestions from delegations.
- Annex VI - Definitions of 'self-service arrangement' and 'self-service device' are maintained. Point 5 on suitability has been aligned with similar wording from Annex VII on liquids other than water to justify keeping the definitions in the proposal.

We would like to invite delegations to comment on two suggestions for amendments during the meeting:

- There is a drafting suggestion to replace table 1 in Annex IV with the first part of table 1 for direct-connected meters in Annex V on active electrical energy meters in the current MID. This could enlarge the range of intensity to cover the common use of EVSE, ensure a high level of consumer protection, technological neutrality and consistency with EN-50732
- Furthermore, there are diverging views among the delegation on the usage of MPE and BMPE in Annex IV which relates to in-field testing of the EVSE and the temperature coefficient and error limits. We would like to encourage delegations to share their preferences on this topic.

We look forward to seeing you on 8 September and finalising these last outstanding issues.

With Kind regards,

DK Presidency Team
