| <p><b>(8 bis)</b> In order to protect the environment, in particular the coastal and marine environment, and public health from being adversely affected by the discharge of insufficiently treated urban wastewater, secondary treatment should be applied to all discharges of urban wastewater from agglomerations of 1 000 p.e. and above. <b><u>Nevertheless enough time should be given to Member States to adapt their treatment infrastructures for agglomerations discharging their wastewaters into 'less sensitive areas' in coastal areas where 'appropriate treatment' is applied as defined in Council Directive 91/271/EEC. This adaptation time should be expanded in the case of Madeira due to the difficulty to install secondary treatment due to the specific geographical condition of the island.</u></b></p> | <p><b>(8 bis)</b> In order to protect the environment, in particular the coastal and marine environment, and public health from being adversely affected by the discharge of insufficiently treated urban wastewater, secondary treatment should be applied to all discharges of urban wastewater from agglomerations of 1 000 p.e. and above. <b><u>Nevertheless enough time should be given to Member States to adapt their treatment infrastructures for agglomerations discharging their wastewaters into 'less sensitive areas' in coastal areas where 'appropriate treatment' is applied as defined in Council Directive 91/271/EEC. This adaptation time should be expanded in the case of Madeira due to the difficulty to install secondary treatment due to the specific geographical condition of the island. Consideration should be given to the specific situation of the Union's outermost regions, as listed in Article 349 of the Treaty on the Functioning of the European Union (TFEU), due to its remoteness, insularity, pronounced topographical unevenness, population dispersion, lack of available territory, and to the characteristics of the open ocean into which urban wastewater from agglomerations of less than 150 000 p.e in Outermost Regions is discharged, particularly in the case of the profound and oligotrophic marine waters of the Atlantic Ocean. The most appropriate level of treatment should be applied to achieve the objectives of this Directive, considering the environmental and public health benefits, as well as technical and financial viability, duly supported by scientific studies.</u></b></p> | <p>According to proposal included in article 6.</p> |
| <p>(11) Recent scientific knowledge underpinning several Commission strategies<sup>2</sup> highlight the need to take action to address the issue of micropollutants, which are now</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                     |

|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-------------|
| <p>detected <u>usually</u> in all waters in the Union. Some of those micropollutants are hazardous for public health and the environment even in <del>small quantities</del> <b>low concentrations of micrograms per litre or below</b>. An additional treatment, i.e. quaternary treatment, should therefore be introduced in order to ensure that a large spectrum of micropollutants is removed from urban wastewater. Quaternary treatment should first focus on organic micropollutants, which represent a significant part of the pollution and for which removal technologies are already designed. The treatment should be imposed based on the precautionary approach combined with a risk-based approach. Therefore, all urban wastewater treatment plants of 100 000 p.e. and above should provide quaternary treatment, as those facilities represent a significant share of micropollutant discharges in the environment and the removal of micropollutants by urban wastewater treatment plants at such scale is cost-effective. For agglomerations of between 10 000 p.e. and 100 000 p.e., Member States should be required to apply quaternary treatment to areas identified as sensitive to pollution with micropollutants based on clear criteria, which should be specified. Such areas should include locations where treated urban wastewater discharge to water bodies result in low dilution ratios, or where the receiving water bodies are used for the production of drinking water or as bathing waters. In order to avoid the requirement of quaternary treatment for agglomerations of between 10 000 p.e. and 100 000 p.e., Member States should be required to demonstrate the absence of risks to the environment or to public health on the basis of a standardised risk assessment. In order to give Member States enough time to plan and deliver the necessary infrastructures, the requirement of quaternary treatment should progressively apply until 2040 with clear interim objectives.</p> |             |             |
| <p>(16) The evaluation has also shown that the wastewater treatment sector offers the opportunity to significantly reduce its own energy consumption and to produce renewable energy, for example by better use of the available surfaces in urban wastewater treatment plants for</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |             |             |

|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|-------------|
| <p>solar energy production or by producing biogas from sludge. The evaluation also illustrated that, without clear legal obligations, only partial progress can be expected in this sector. In this context, Member States should be required to ensure that the total annual energy used by all urban wastewater treatment plants on their national territory treating a load of 10 000 p.e. and above does not exceed the production of energy from renewable sources as defined in Article 2(1) of Directive (EU) 2018/2001 of the European Parliament and of the Council<sup>3</sup>, by those urban wastewater treatment plants. <u><b>In order to take into account the specificities of each urban wastewater treatment plant, optimise the investments needed and provide for the required flexibility to reach the abovementioned objective, while ensuring that the potential for renewable energy production and for energy savings is fully seized, the energy neutrality objective should be met at national level and not for each treatment plant. All renewable energies produced by the urban wastewater treatment plant or from the transformation of urban wastewater residues, whether on-site or off-site, such as hydraulic, solar, thermal, wind energy or biogas, should be taken into account. A maximum share of 25% of renewable energy, not directly linked to urban wastewater treatment activities, may be purchased or produced from external sources.</b></u> That objective should be progressively met with interim targets by 31 December 2040. Reaching this energy neutrality target will contribute to reduce the avoidable greenhouse gas (GHG) emissions from the sector by 46 %, while supporting the achievement of the 2050 climate neutrality objectives and related national and Union objectives, such as the objectives set out in Regulation (EU) 2018/842 of the European Parliament and of the Council<sup>4</sup>. Encouraging EU-based biogas or solar energy production while enhancing energy efficiency</p> |  |             |

<sup>3</sup> Directive (EU) 2018/2001 of the European Parliament and of the Council of 11 December 2018 on the promotion of the use of energy from renewable sources (OJ L 328, 21.12.2018, p. 82).

<sup>4</sup> Regulation (EU) 2018/842 of the European Parliament and of the Council of 30 May 2018 on binding annual greenhouse gas emission reductions by Member States from 2021 to 2030 contributing to climate action to meet commitments under the Paris Agreement and amending Regulation (EU) No 525/2013 (OJ L 156, 19.6.2018, p. 26).

| <p><b>medical facilities, etc.</b> In most instances, there is a poor understanding and knowledge of such pollution which could deteriorate the functioning of the treatment process and contribute to the pollution of the receiving waters, but also prevent the recovery of sludge and the reuse of treated wastewater. Member States should therefore regularly monitor and report on such non-domestic pollution that enters the urban wastewater treatment plants and is discharged into water bodies. To prevent pollution from non-domestic wastewater discharges at source, releases from industries or enterprises connected to collecting systems should be subject to prior authorisation. In order to ensure that collecting systems and urban wastewater treatment plants are technically capable of receiving and treating the incoming pollution, the operators who manage urban wastewater treatment plants receiving non-domestic wastewater should be consulted before those permits are issued and should be able to consult the issued permits in order to be able to adapt their treatment processes. Where non-domestic pollution is identified in the incoming waters, Member States should take appropriate measures to reduce pollution at source, by enhancing the monitoring of pollutants in collecting systems so that the pollution sources can be identified and, where necessary, by reviewing the authorisations provided to relevant, connected urban wastewater treatment plants.</p> |  |             |
| <p><del>(18)</del> <b>(19 bis)</b> The water resources of the Union are increasingly under pressure, resulting in permanent or temporary water scarcity in some areas of the Union. The Union's ability to respond to the increasing pressures on water resources could be improved through a wider reuse of treated urban wastewater, limiting freshwater abstraction from surface and groundwater bodies. Therefore, the reuse of treated urban wastewater should be encouraged and applied whenever appropriate, whilst taking into account the need to ensure that the objectives of good ecological and chemical status of the receiving bodies, as defined in Directive 2000/60/EC, are met. The reinforcement of the requirements for the treatment of urban wastewater, and the actions to better monitor, track and reduce pollution at source, will have impacts on the quality of treated urban</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                     |             |

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|---------------|
| <p>(3) 'non-domestic wastewater' means <del>any</del> wastewater, <b>other than domestic wastewater and urban runoff</b>, which is discharged into <del>collecting systems</del> from premises used for either the following:</p> <p>(a) the exercise of a trade;</p> <p>(b) <del>activities carried out by an institution;</del></p> <p>(c) <del>or</del> industrial <b>or economical</b> activities;</p> <p><u>The wastewaters from the above activities, that are only domestic wastewater (from toilets or kitchens with food preparation) are entitled as domestic wastewaters.</u></p> |               |               |
| <p>(4) 'agglomeration' means an area where the <b>population (expressed in population equivalent), combined or not with and/or economic activities</b> <del>pollution load of urban wastewater</del> is sufficiently concentrated (<b>taking as a reference 10 p.e. per hectare or above</b>) for urban wastewater to be collected and conducted to <b>one or more</b> <del>an</del> urban wastewater treatment plants or to a <b>one or more</b> final discharge points. <u>into receiving waters;</u></p>                                                                                  |               |               |
| <p>(5) 'urban runoff' means <b>precipitation</b> <del>rainwater</del> from agglomerations collected by combined or separate sewers;</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                      |               |               |
| <p>(6) '<del>sewer storm water</del> overflow' means discharge of untreated urban wastewater <b>into</b> receiving waters from <b>separate or</b> combined sewers <del>caused by rainfall;</del></p>                                                                                                                                                                                                                                                                                                                                                                                         |               |               |
| <p>(7) 'collecting system' means a system of conduits which collects and conducts urban wastewater;</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |               |               |
| <p>(8) 'combined sewer' means a <b>single</b> conduit <del>that that designed to</del> collects and conducts urban wastewater <b>including urban runoff; including urban runoff;</b></p>                                                                                                                                                                                                                                                                                                                                                                                                     |               |               |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                                                                                                    | [PT] proposal | [PT] comments |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|---------------|
| <p>(9) 'separate sewer' means a <b>system of</b> conduits that separately collects and conducts <b>either urban runoff or either of the following</b>:</p> <p><del>(a) domestic urban wastewater not including urban runoff;</del></p> <p><del>(b) non-domestic wastewater <b>non-domestic wastewater</b>;</del></p> <p><del>(c) a mixture of domestic and non-domestic wastewater;</del></p> <p><del>(d) rainwater from agglomerations;</del></p> |               |               |
| <p>(10) '1 population equivalent' or '(1 p.e.)' means <del>the unit expressing the average potential water pollution load caused by one person per day, where 1 p.e. is the organic biodegradable load</del> <b>per day</b> having a five-day biochemical oxygen demand (BOD5) of 60 g of oxygen <del>per day</del> <b>per day</b>;</p>                                                                                                            |               |               |
| <p>(10 bis) [NEW] 'primary treatment' means treatment of urban wastewater by a physical and/or chemical process involving settlement of suspended solids, or other processes in which the BOD5 of the incoming wastewater is reduced by at least 20% before discharge and the total suspended solids of the incoming wastewater are reduced by at least 50%.</p>                                                                                   |               |               |
| <p>(11) 'secondary treatment' means treatment of urban wastewater by a process generally involving biological treatment with a secondary settlement or another process <b>which reduces removes most of biodegradable organic matter in from</b> urban wastewater;</p>                                                                                                                                                                             |               |               |
| <p>(12) 'tertiary treatment' means treatment of urban wastewater by a process which <b>reduces removes most of</b> <del>by a process which removes</del> nitrogen and/or phosphorus from the urban wastewaters;</p>                                                                                                                                                                                                                                |               |               |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                                                                         | [PT] proposal | [PT] comments |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|---------------|
| (13) 'quaternary treatment' means treatment of urban wastewater by a process which <del>removes</del> <b>reduces</b> a broad spectrum of micropollutants <del>in from the</del> <b>from</b> urban wastewaters;                                                                                                                                                                                                          |               |               |
| (14) 'sludge' means <del>any solid, semisolid, or liquid waste</del> <b>organic residue and inorganic sludge-residue</b> resulting from the treatment of urban wastewater <b>in an urban wastewater treatment plant (excluding debris, grit, grease, other debris and any other screenings residues from the first pre-treatment step);</b>                                                                             |               |               |
| (15) 'eutrophication' means the enrichment of water by nutrients, especially compounds of nitrogen and/or phosphorus, causing an accelerated growth of algae and higher forms of plant life to produce an undesirable disturbance to the balance of organisms present in the water and to the quality of the water concerned;                                                                                           |               |               |
| (16) 'micropollutant' means a substance, including its breakdown products, <del>that is usually present in the environment and urban wastewaters in low concentrations below milligrams per litre and</del> which can be considered hazardous to human health or the environment based on any of the <b>relevant</b> criteria set out in Part 3 and Part 4 of Annex I to Regulation EC <b>1272/2008</b> <sup>11</sup> ; |               |               |
| (17) 'dilution ratio' means the ratio <del>of between the last five years average volume</del> of annual flow of the receiving waters at the point of discharge <b>and to the last five years average of the annual discharge</b> volume of urban wastewater <b>into surface waters; discharged from a treatment plant;</b>                                                                                             |               |               |

<sup>11</sup> Regulation EC 1272/2008 of the European Parliament and of the Council on classification, labelling and packaging of substances and mixtures (OJ L 353 31.12.2008, p 1).

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                      | [PT] proposal | [PT] comments |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|---------------|
| (18) 'producer' means any manufacturer, importer or distributor that on a professional basis places products on the market of a Member State, including by means of distance contracts as defined in Article 2(7) of Directive 2011/83/EU means;                                                                     |               |               |
| (19) 'Producer Responsibility Organisation' means an <b>nationally recognised</b> organisation established collectively by producers for the purpose of fulfilling their obligations under Article 9 <b>and 10</b> ;                                                                                                 |               |               |
| (20) 'sanitation' means facilities and services for the safe disposal of human urine, faeces, and menstrual blood;                                                                                                                                                                                                   |               |               |
| (21) 'antimicrobial resistance' means the ability of micro-organisms to survive or to grow in the presence of a concentration of an antimicrobial agent which is usually sufficient to inhibit or kill micro-organisms of the same species;                                                                          |               |               |
| (22) 'public concerned' means the public affected or likely to be affected by, or having an interest in, the decision-making procedures for the implementation of the obligations laid down in this Directive, including non-governmental organisations promoting the protection of human health or the environment; |               |               |
| (23) 'plastic biomedica' means a plastic support used for the development of the bacteria needed for the treatment of urban wastewaters;                                                                                                                                                                             |               |               |
| (24) 'placing on the market' means the first making available of a product on the market of a Member State                                                                                                                                                                                                           |               |               |
| (25) <b>'load' means the amount of organic biodegradable matter measured as BOD5 in urban wastewater, expressed in p.e., or any pollutant or nutrient in urban wastewater, expressed in p.e. or mass unit per time (usually kilogram per day or year).</b>                                                           |               |               |

## ARTICLE 3 – COLLECTING SYSTEMS AND CALCULATION OF THE LOAD EXPRESSED IN P.E

| New text proposal_Clusters1,3,5                                                                                                                                                                                          | PT proposal | PT comments |

| <p>2. Member States shall ensure that individual systems are designed, operated and maintained in a manner that <del>ensures at least</del> <b>achieves</b> the same level of <b>environmental protection</b> treatment as the secondary and tertiary treatments referred to in Articles 6 and 7. <del>Tertiary treatment for individual systems will only be required in those cases that individual systems are discharging in a sensitive area or a catchment area.</del></p> <p><del>This requirement will apply to existing individual systems six years after 2033.</del></p>                                                                                                                                                           |                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                    |
| <p>3. [NEW] Member States shall ensure that <b>individual systems that are used</b> in agglomerations of 1 000 p.e. and above, where individual systems are used are registered in a <del>public</del> <b>national, or regional or local</b> registry and that regular inspections <del>or other means of</del> <b>regular checks or control</b> of those systems, <b>on the basis of a risk-based approach</b>, are carried out by the appropriate authority <del>or other body authorised at national, or regional or local level.</del></p>                                                                                                                                                                                                |                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                    |
| <p><del>34.</del> The Commission is empowered to adopt <del>delegated implementing acts in accordance with the procedure referred to in Article 27 to supplement this Directive by that</del> <b>shall be adopted in accordance with the examination procedure referred to in Article 28(2) for establishing minimum requirements for:</b></p> <p>(a) the design, operation, and maintenance of individual system; and</p> <p>(b) <del>by specifying the requirements for the regular inspections referred to in paragraph 2 3,</del> <b>on the basis of a risk-based approach</b> <del>second subparagraph.</del></p> <p><b>The Commission will provide the requirements by {24 months from the entry into force of this Directive}.</b></p> | <p>4. ...</p> <p>(b) the regular inspections referred to in paragraph 3, <b>on the basis of a risk-based approach and considering the specific hydro-geological conditions for groundwaters.</b></p> | <p>We highlight that if the methodology developed is too complex, it may not be feasible. On the other hand, the risk of these systems is essentially for groundwater, whose specificity may justify the adoption of regional criteria. Therefore, it is suggested that this possibility is specified, in line with the Groundwater Directive.</p> |

| <p>1. For agglomerations of 2 000 p.e. and above, Member States shall ensure that <b>urban wastewater treatment plants serving agglomerations of 2 000 p.e. and above</b> <del>urban wastewater entering collecting systems is subject to meet the relevant requirements for secondary treatment or an equivalent treatment of urban wastewater, set out in accordance with Part B and Table 1 of Annex I in accordance with the methods for monitoring and evaluation of results laid down in Part D of Annex I paragraph 3 or an equivalent treatment before discharge into receiving waters.</del></p> <p><del>For agglomerations of between 2 000 p.e. and 1 000 p.e. which are discharging into coastal areas, the obligation set out in the first paragraph shall not apply until 31 December 2027 for:</del></p> <p><del>(a) For</del> For agglomerations of between 2 000 p.e. and 10 000 p.e. which are discharging into coastal areas waters as defined under Directive 2000/60/EC and which apply appropriate treatment in accordance with Article 7 of Council Directive 91/271/EEC <del>on [please insert the date = date if entry into force of this directive];</del>, the obligations set out in the first paragraph shall not apply until 31 December 2030.</p> <p><del>(b) For</del> For agglomerations discharging into less sensitive areas as referred to in Article 6(1) of Council Directive 91/271/EEC the obligations set out in the first paragraph shall apply in seven years after the <del>on [please insert the date = date if entry into force of this Directive]</del> <u>and fifteen years in the case of Madeira after the entry into force of this Directive.</u></p> | <p>(b) For agglomerations discharging into less sensitive areas as referred to in Article 6(1) of Council Directive 91/271/EEC the obligations set out in the first paragraph shall apply in <b>seven twelve years</b> after the on [please insert the date = date if entry into force of this Directive] <u>and fifteen years in the case of Madeira after the entry into force of this Directive.</u></p> | <p>In line with revised deadlines introduced along the proposal, an adequate timeframe should be given for agglomerations located in current less sensitive areas, considering the technical limitations which will imply finding technical and urban planning solutions, and adequate financing. It would therefore be important to align with the next structural funding period. The monitoring and evaluation reporting that is now carried out would continue to be guaranteed during the transition period.</p> |

| <p>1. Member States shall ensure that energy audits of urban wastewater treatment plants and collecting systems are carried out every four years. Those audits shall be carried out in accordance with Article 8 of Directive 2012/27/EU and include an identification of the potential for cost-effective <b>measures to reduce the use of energy and or enhance the</b> production of renewable energy, with a particular focus to identify and utilise the potential for biogas production, while reducing <b>greenhouse gas</b> methane emissions. The first audits shall be carried out:</p> <p>(a) by 31 December <del>2025</del> <b>2030</b> for urban wastewater treatment plants treating a load of 100 000 p.e. and above and the collecting systems connected to them;</p> <p>(b) by 31 December <del>2030</del> <b>2035</b> for urban wastewater treatment plants treating a load of between 10 000 p.e. and 100 000 p.e. and the collecting systems connected to them.</p> |             |             |

|                                                                                    |             |             |

~~1. Member States shall monitor the presence of the following public health parameters in urban wastewater:~~

~~(a) SARS-CoV-2 virus and its variants;~~

~~(b) poliovirus;~~

~~(c) influenza virus;~~

~~(d) emerging pathogens;~~

~~(e) contaminants of emerging concern;~~

~~(f) any other public health parameters that are considered relevant by the competent authorities of the Member States for monitoring.~~

21. For the purpose of paragraph 1, Member States shall set up a national system for ~~permanent~~ cooperation and coordination between competent authorities responsible for public health and competent authorities responsible for urban wastewater treatment with regard to:

(a) the identification of ~~other~~ **relevant** public health parameters ~~than the ones referred to in paragraph 1~~ that are to be monitored **at least in the inlet of** urban wastewater **treatment plants**, such as those in the following list:

**(i) SARS-CoV-2 virus and its variants of interest;**

**(ii) poliovirus;**

**(iii) influenza virus;**

**(iv) emerging pathogens;**

**(v) contaminants of emerging concern;**

**(vi) (v) any other public health parameters that are considered relevant by the competent authorities of the Member States for monitoring;**

(b) the determination of the location and the frequency of urban wastewater sampling and analysis for each public health parameter identified in accordance with paragraph 1(a), ~~taking into account~~ **thus regarding** the available health data and the needs in terms of public health data and, where relevant, the local epidemiological situations;

(c) the organisation of an appropriate and timely communication of the monitoring results to the competent authorities responsible for public health and to Union

| (28)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |             |             |
| 1. Member States shall take the necessary measures to ensure that sludge management routes are conform to the waste hierarchy provided for in Article 4 of Directive 2008/98/EC. Such routes shall maximize prevention, <b>preparing for</b> reuse, <del>and recycling and other material recovery</del> of resources and minimize the adverse effects on the environment.                                                                                                                                                                                                                                                                                                                                                                                             |             |             |
| 2. The Commission is empowered to adopt <del>delegated</del> <b>implementing</b> acts <del>in accordance with the procedure referred to in Article 27 to supplement this Directive by setting out</del> <b>promoting to set out</b> the minimum reuse and recycling rates for phosphorus <del>and nitrogen</del> from <del>wastewater and</del> sludge, <del>and from urban wastewater not reused under the derogation of Article 15(1), taking in order to take</del> into account available technologies, <b>resources, and economic viability</b> for phosphorus <del>and nitrogen</del> recovery, <del>in sludge and wastewater</del> . Those <b>implementing acts shall be adopted in accordance with the examination procedure referred to in Article 28(2).</b> |             |             |

## ARTICLE 21 – MONITORING

| <p>3. For all agglomerations of <del>above</del> 10 000 p.e. <b>and above</b>, Member States shall <b>ensure that competent authorities, appropriate bodies or the operator of the wastewater treatment plant</b> monitor, at the inlets and outlets of urban wastewater treatment plants, the concentration and loads in the urban wastewater of the following elements:</p> <p>(a) pollutants <b><u>that are expected to be found in urban wastewaters</u></b> listed in:</p> <ul style="list-style-type: none"> <li>(i) Annexes VIII and X to Directive 2000/60/EC, the Annex to Directive 2008/105/EC, Annex I to Directive 2006/118/EC and Part B of Annex II to Directive 2006/118/EC;</li> <li>(ii) the Annex to Decision 2455/2001/EC of the European Parliament and of the Council<sup>19</sup>;</li> <li>(iii) Annex II to Regulation (EC) No 166/2006 of the European Parliament and of the Council<sup>20</sup>;</li> <li>(iv) Annexes I and II to Directive 86/278/EEC.</li> </ul> <p>(b) parameters listed in Part B of Annex III to Directive (EU) 2020/2184, where urban wastewater is discharged in a catchment area referred to in Article 8 of that Directive;</p> <p>(c) the presence of microplastics.</p> <p><b><u>[NEW] Pollutants listed under points (a) and (b) may be excluded from the monitoring under this paragraph as long as it can be demonstrated, inter alia on the basis of monitoring results, that they are absent in urban wastewaters.</u></b></p> <p>For all agglomerations of above 10 000 p.e., Member States shall <b>ensure that competent authorities, appropriate bodies or the operator of the wastewater treatment plant</b> monitor the presence of micro-plastics in the sludge <b><u>when relevant and, notably, when it is reused in agriculture</u></b>.</p> <p><del>4.</del> The monitoring referred to in <del>the first and second sub</del> <b>this</b> paragraphs <b>3</b> shall be carried out with the following frequencies:</p> <p>(a) at least two samples per year, with maximum <del>6-7</del> months between the samples, for agglomerations of <del>100 000</del> <b>150.000</b> p.e. and <del>more</del> <b>above</b>;</p> | <p>“ ...</p> <p>(c) the presence of microplastics.</p> <p><b>Pollutants listed under points (a) and (b) should be selected according the results of risk assessment and may be excluded from the monitoring under this paragraph as long as it can be demonstrated, inter alia on the basis of monitoring results, that they are absent in urban wastewaters and/or when not feasible to measure. I case of metals, should always be analysed the dissolved fractions.</b></p> | <p>3.</p> <p>The list of pollutants to monitor could derive from the proposed lists but it should result from the risk assessment process, in the same way as proposed in the Directive (EU) 2020/2184 about the quality of water intended for human consumption and only in parameters that apply to “water matrix” and not biota, sediments, air, soils or wastes.</p> <p>For example, the PRTR defines “total metal”, but Directive 2000/60/EC establishes “dissolved metal”, which is much more appropriated to water to measure its bioavailability.</p> <p>For example, not all the parameters listed in the Regulation (EC) N° 166/2006 are of concern to urban wastewaters.</p> <p>On another end, the monitoring programs should be defined according the risk assessment, as already said and also taken into account other similar procedures under other directives, such as WFD and DW</p> <p>We suggest clarifying the text and not just consider the exclusion based on monitoring results.</p> |

| 3. Member States shall update their national implementation programmes at least every <del>5</del> 6 years. They shall submit them to the Commission by 31 December, except where they can demonstrate that they are in compliance with Articles 3 to 8.                                                                                                                                                                   |             |             |
|                                                                                                                                                                                                                                                                                                                                                                                                                            |             |             |
| 4. The Commission is empowered to adopt implementing acts establishing the methods and formats for submission of the national implementation programmes. Those implementing acts shall be adopted in accordance with the examination procedure referred to in Article 28(2) <b><u>no later than [OP please insert the date = the last day of the sixth month from the date of entry into force of this Directive].</u></b> |             |             |
|                                                                                                                                                                                                                                                                                                                                                                                                                            |             |             |

**5. Member States may include in their first national implementation programmes an extension of maximum six years of the following deadlines:**

**(a) the deadlines referred to in Article 3(2) and/or in Article 6(2) on the conditions that:**

**(i) less than 50 % of these agglomerations are provided with collecting systems and are not subject to secondary treatment on [OP please insert the date=day of entry into force of the Directive]; and**

**(ii) the national implementation programme includes:**

**- the number of agglomerations between 1 000 and 2 000 p.e. that lacks a collecting system and secondary treatment on [OP please insert the date=day of entry into force of the Directive]; and**

**- a plan detailing the necessary investments to reach full compliance for these agglomerations within the extended deadlines;**

**(b) the deadline for agglomerations referred to in Article 7(3) on the conditions that:**

**(i) at least 50 % of these agglomerations are not applying tertiary treatment on [OP please insert the date=day of entry into force of the Directive]; and**

**(ii) the national implementation programme includes:**

**- the number of agglomerations referred to in Article 7(3) lacking tertiary treatment on [OP please insert the date=day of entry into force of the Directive]; and**

**- a plan detailing the necessary investments to reach full compliance for these agglomerations within the extended deadlines;**

**The extensions of these deadlines shall be effective only if the above-mentioned conditions are fulfilled. The Commission shall notify the Member States if**

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |             |             |
| 1. Member States shall ensure that, where damage to human health has occurred as a result of a violation of national measures that were adopted pursuant to this Directive, the individuals affected have the right to claim and obtain compensation for that damage from the relevant natural or legal persons and, where appropriate, from the relevant competent authorities responsible for the violation.                                                                                                                        |             |             |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |             |             |
| <del>2. Member States shall ensure that, as part of the public concerned, non-governmental organisations promoting the protection of human health or the environment and meeting any requirements under national law are allowed to represent the individuals affected and bring collective actions for compensation. Member States shall ensure that a claim for a violation leading to a damage cannot be pursued twice, by the individuals affected and by the non-governmental organisations referred to in this paragraph.</del> |             |             |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |             |             |
| 3 2. Member States shall ensure that national rules and procedures relating to claims for compensation are designed and applied in such a way that they do not render impossible or excessively difficult the exercise of the right to compensation for damage caused by a violation pursuant to paragraph 1.                                                                                                                                                                                                                         |             |             |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |             |             |

| 1. The power to adopt delegated acts is conferred on the Commission subject to the conditions laid down in this Article.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |             |             |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |             |             |
| 2. The power to adopt delegated acts referred to in Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), and 24(3) shall be conferred on the Commission for a period of five years from [OP please insert the date = the date of entry into force of this Directive]. The Commission shall draw up a report in respect of the delegation of power not later than nine months before the end of the five-year period. The delegation of power shall be tacitly extended for periods of an identical duration unless the European Parliament or the Council opposes such extension not later than three months before the end of each period. |             |             |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |             |             |
| 3. The delegation of power referred to in Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), and 24(3) may be revoked at any time by the European Parliament or by the Council. A decision to revoke shall put an end to the delegation of the power specified in that decision. It shall take effect the day following the publication of the decision in the Official Journal of the European Union or at a later date specified therein. It shall not affect the validity of any delegated acts already in force.                                                                                                                      |             |             |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |             |             |
| 4. Before adopting a delegated act, the Commission shall consult experts designated by each Member State in accordance with the principles laid down in the Interinstitutional Agreement of 13 April 2016 on Better Law-Making.                                                                                                                                                                                                                                                                                                                                                                                                                   |             |             |

| 5. As soon as it adopts a delegated act, the Commission shall notify it simultaneously to the European Parliament and to the Council.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |             |             |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |             |             |
| 6. A delegated act adopted pursuant to Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), or 24(3) shall enter into force only if no objection has been expressed either by the European Parliament or by the Council within a period of two months of notification of that act to the European Parliament and the Council or if, before the expiry of that period, the European Parliament and the Council have both informed the Commission that they will not object. That period shall be extended by two months at the initiative of the European Parliament or of the Council. |             |             |

| <p>4. The treated <u>urban</u> wastewater shall be assumed to conform to the relevant parameters if, for each relevant parameter considered individually, samples of the water show that it complies with the relevant parametric value in the following way:</p> <p>(a) for the parameters specified in Table 1, a maximum number of samples which are allowed to fail the requirements, expressed in concentrations and/or percentage reductions, is specified in Table 4;</p> <p>(b) for the parameters of Table 1 expressed in concentrations, the failing samples taken under normal operating conditions must not deviate from the parametric values by more than 100 %, except for the parameter total suspended solids, for which deviations from the parametric values of up to 150 % may be accepted;</p> <p>(c) for those parameters specified in Table 2 the annual mean of the samples for each parameter shall be conform to the relevant parametric values set out in that table. One or both parameters may be applied depending on the local situation. The values for concentration or for the minimum percentage of reduction shall apply;</p> <p>(d) for the parameters specified in Table 3, each sample taken shall be conform to the parametric values set out in that table.</p> |  |             |             |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |             |             |

| 3. The measures to be taken to achieve the objectives referred to in point 2 accompanied with a clear identification of the actors involved and their responsibilities in the <del>implantation</del> <b>implementation</b> of the integrated plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |             |             |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |             |             |
| <p>4. When assessing which measures to be taken under point 3, Member States shall ensure that their competent authorities consider at least the following:</p> <p>(a) firstly, preventive measures aiming at avoiding the entry of unpolluted rain waters into collecting systems, including measures promoting natural water retention or rainwater harvesting, and measures increasing green spaces or limiting impermeable surfaces in the agglomerations;</p> <p>(b) secondly, measures to better manage and optimize the use of existing infrastructure including collecting systems, storage volumes, urban wastewater treatment plants with the aim to ensure that polluted rain waters are collected and treated, and releases of untreated urban wastewater into receiving waters are minimised;</p> <p>(c) finally, where necessary to achieve the objectives referred to in point 2, additional mitigation measures including the adaptation of the infrastructure for the collection, storage and treatment of urban wastewater or the creation of new infrastructures with a priority to green infrastructure such as vegetated ditches, treatment wetlands and storage ponds designed in order to support biodiversity. Where relevant, water reuse shall be considered in the context of the development of the integrated urban wastewater management plans referred to in Article 5.</p> |             |             |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |             |             |
| <p>(2) Directive 91/271/EEC sets the legal framework for the collection, treatment and discharge of urban wastewater and the discharge of biodegradable wastewaters from certain industrial sectors. <b><u>Urban wastewaters can be formed by different mixtures of domestic wastewaters, urban runoff and non-domestic wastewater from other origins. Wastewater from institutions such as offices, schools, kitchens with food preparation, etc. which are predominantly originated from the human metabolism, qualifies as domestic wastewaters as well.</u></b> Its objective is to protect the environment from being adversely affected by insufficiently treated urban wastewater discharges. This Directive should continue to pursue the same objective, whilst also contributing to the protection of public health, when for instance urban wastewater is discharged in bathing waters or in water bodies used for the abstraction of drinking water, or when urban wastewater is used as an indicator for parameters relevant for public health. It should also improve access to sanitation and to key information related to the governance of the urban wastewater collection and treatment activities. Finally, this Directive should contribute to the progressive <del>elimination</del> <b>reduction</b> of greenhouse gas (GHG) emissions from urban wastewater collection and treatment activities, <del>notably by further reducing nitrogen emissions</del> but also by promoting energy efficiency and production of renewable energies, and thus should contribute to the 2050 objective of Climate</p> |             |             |

| <p>impervious and leak-proof, and that monitoring and inspection of the systems are carried out at regular and fixed intervals. <b><u>Where individual systems are used to collect and treat more than 2% of the urban wastewater load at national level from agglomerations of 2 000 p.e. and above, Member States should provide the Commission with justifications for the reasons for the use of individual systems instead of collecting systems, the level of compliance of those systems with established standards under this Directive and measures taken to reduce the use of such systems. The Commission should be empowered to adopt implementing acts to establish the format of the reporting and the level of details of the information to be provided by national authorities.</u></b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |                                                                                                                                    |
| <p>(7) During rainfall, storm water overflows and urban runoff represent a sizeable remaining source of pollution discharged into the environment. Those emissions are expected to increase due to the combined effects of urbanisation and progressive change of the rain regime linked with climate change. Solutions to reduce that source of pollution should be defined at local level taking into account the specific local conditions. They should be based on an integrated quantitative and qualitative water management in urban areas. Therefore, Member States should ensure that integrated urban wastewater management plans are established at local level for all agglomerations of 100 000 p.e. and above as those agglomerations are responsible for a significant share of the pollution emitted. Furthermore, integrated urban wastewater management plans should also be put in place for agglomeration of between 10 000 p.e. and 100 000 p.e. where storm water overflows or urban runoff poses a risk for the environment or public health. <b><u>In order to ensure an adequate coverage of the integrated management plans and a comprehensive solution to storm water problems, they should be established for each urban wastewater drainage area of the concerned agglomerations.</u></b></p> |                                                                                     | <p>We suggest to use the wording “catchment area of the agglomerations” and to include this term into article 2 - definitions.</p> |

|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-------------|
| <p><b>(8 bis)</b> In order to protect the environment, in particular the coastal and marine environment, and public health from being adversely affected by the discharge of insufficiently treated urban wastewater, secondary treatment should be applied to all discharges of urban wastewater from agglomerations of 1 000 p.e. and above. <b><u>Nevertheless enough time should be given to Member States to adapt their treatment infrastructures for agglomerations discharging their wastewaters into 'less sensitive areas' in coastal areas where 'appropriate treatment' is applied as defined in Council Directive 91/271/EEC. This adaptation time should be expanded in the case of Madeira due to the difficulty to install secondary treatment due to the specific geographical condition of the island.</u></b></p>                                                                                                                                                                                                                                   |             |             |
| <p>(11) Recent scientific knowledge underpinning several Commission strategies<sup>2</sup> highlight the need to take action to address the issue of micropollutants, which are now detected <b><u>usually</u></b> in all waters in the Union. Some of those micropollutants are hazardous for public health and the environment even in <del>small quantities</del> <b><u>low concentrations of micrograms per litre or below</u></b>. An additional treatment, i.e. quaternary treatment, should therefore be introduced in order to ensure that a large spectrum of micropollutants is removed from urban wastewater. Quaternary treatment should first focus on organic micropollutants, which represent a significant part of the pollution and for which removal technologies are already designed. The treatment should be imposed based on the precautionary approach combined with a risk-based approach. Therefore, all urban wastewater treatment plants of 100 000 p.e. and above should provide quaternary treatment, as those facilities represent a</p> |             |             |

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|-------------|
| <p>significant share of micropollutant discharges in the environment and the removal of micropollutants by urban wastewater treatment plants at such scale is cost-effective. For agglomerations of between 10 000 p.e. and 100 000 p.e., Member States should be required to apply quaternary treatment to areas identified as sensitive to pollution with micropollutants based on clear criteria, which should be specified. Such areas should include locations where treated urban wastewater discharge to water bodies result in low dilution ratios, or where the receiving water bodies are used for the production of drinking water or as bathing waters. In order to avoid the requirement of quaternary treatment for agglomerations of between 10 000 p.e. and 100 000 p.e., Member States should be required to demonstrate the absence of risks to the environment or to public health on the basis of a standardised risk assessment. In order to give Member States enough time to plan and deliver the necessary infrastructures, the requirement of quaternary treatment should progressively apply until 2040 with clear interim objectives.</p> |  |             |
| <p>(16) The evaluation has also shown that the wastewater treatment sector offers the opportunity to significantly reduce its own energy consumption and to produce renewable energy, for example by better use of the available surfaces in urban wastewater treatment plants for solar energy production or by producing biogas from sludge. The evaluation also illustrated that, without clear legal obligations, only partial progress can be expected in this sector. In this context, Member States should be required to ensure that the total annual energy used by all urban wastewater treatment plants on their national territory treating a load of 10 000 p.e. and above does not exceed the production of energy from renewable sources as defined in Article 2(1) of Directive (EU) 2018/2001 of the European Parliament and of the Council<sup>3</sup>, by those urban wastewater treatment plants. <b><u>In order to take into</u></b></p>                                                                                                                                                                                                        |                                                                                     |             |

<sup>3</sup> Directive (EU) 2018/2001 of the European Parliament and of the Council of 11 December 2018 on the promotion of the use of energy from renewable sources (OJ L 328, 21.12.2018, p. 82).

|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|-------------|
| <p>also in line with Directive (EU) 2018/844 of the European Parliament and of the Council<sup>7</sup> and with Directive (EU) 2018/2001 in which urban wastewater treatment sites are qualified as 'go-to' areas for renewables, meaning a location designated as particularly suitable for the installation of plants for the production of energy from renewable sources. In order to reach the objective of energy neutrality via optimal measures for each urban wastewater treatment plant and for the collection system, Member States should ensure that energy audits are carried out in accordance with Article 8 of Directive 2012/27/EU of the European Parliament and of the Council<sup>8</sup> every four years. Those audits should include an identification of the potential for cost-effective use or production of renewable energy following the criteria set out in Annex VI to Directive 2012/27/EU.</p>                                                                                                                  |  |             |
| <p>(19) Urban wastewater treatment plants also receive non-domestic wastewater, including industrial wastewater, which can contain a range of pollutants not explicitly covered by Directive 91/271/EEC, such as heavy metals, microplastics, micropollutants and other chemicals. <b><u>This non-domestic wastewater may come from industries, or commercial establishments, or hospitals and other medical facilities, etc.</u></b> In most instances, there is a poor understanding and knowledge of such pollution which could deteriorate the functioning of the treatment process and contribute to the pollution of the receiving waters, but also prevent the recovery of sludge and the reuse of treated wastewater. Member States should therefore regularly monitor and report on such non-domestic pollution that enters the urban wastewater treatment plants and is discharged into water bodies. To prevent pollution from non-domestic wastewater discharges at source, releases from industries or enterprises connected to</p> |                                                                                     |             |

|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|-------------|
| <p>collecting systems should be subject to prior authorisation. In order to ensure that collecting systems and urban wastewater treatment plants are technically capable of receiving and treating the incoming pollution, the operators who manage urban wastewater treatment plants receiving non-domestic wastewater should be consulted before those permits are issued and should be able to consult the issued permits in order to be able to adapt their treatment processes. Where non-domestic pollution is identified in the incoming waters, Member States should take appropriate measures to reduce pollution at source, by enhancing the monitoring of pollutants in collecting systems so that the pollution sources can be identified and, where necessary, by reviewing the authorisations provided to relevant, connected urban wastewater treatment plants.</p>                                                                                                                                                                                                                                                                        |  |             |
| <p>(18) <b>(19 bis)</b> The water resources of the Union are increasingly under pressure, resulting in permanent or temporary water scarcity in some areas of the Union. The Union's ability to respond to the increasing pressures on water resources could be improved through a wider reuse of treated urban wastewater, limiting freshwater abstraction from surface and groundwater bodies. Therefore, the reuse of treated urban wastewater should be encouraged and applied whenever appropriate, whilst taking into account the need to ensure that the objectives of good ecological and chemical status of the receiving bodies, as defined in Directive 2000/60/EC, are met. The reinforcement of the requirements for the treatment of urban wastewater, and the actions to better monitor, track and reduce pollution at source, will have impacts on the quality of treated urban wastewater, and will therefore support water reuse. Where water reuse serves the purpose of agricultural irrigation, it should be carried out in accordance with Regulation (EU) 2020/741 of the European Parliament and of the Council <sup>9</sup>.</p> |                                                                                     |             |

<sup>9</sup> Regulation (EU) 2020/741 of the European Parliament and of the Council of 25 May 2020 on minimum requirements for water reuse (OJ L 177, 5.6.2020, p. 32).

|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|-------------|
| <p>(28) The evaluation concluded that sludge management could be improved to better align it with the principles of the circular economy and of the waste hierarchy as defined in Article 4 of Directive 2008/98/EC. The actions to better monitor and reduce pollution at source from non-domestic discharges will help improving the quality of the sludge produced and ensure its safe use in agriculture. In order to ensure a proper and safe recovery of nutrients, including the critical substance phosphorus, from the sludge, minimum recovery rates should be defined at Union level.<br/> <b><u>The recovered nutrients shall be used as substitutes for primary nutrients, for example, in the production of fertilizers.</u></b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |             |
| <p>(29) <del>Additional</del> <b><u>Adequate</u></b> monitoring is necessary to verify compliance with the new requirements concerning micropollutants, non-domestic pollution, energy neutrality, GHG emissions, <del>storm water</del> <b><u>sewer</u></b> overflows and <b><u>polluted</u></b> urban runoff <b><u>discharges</u></b>. <b><u>Microplastics and relevant micropollutants should be monitored, where relevant, in sewer overflow discharges with a representative sampling programme which would inform concentration adopted for water quality modelling. This monitoring should be updated on a regular basis to ensure the modelling continues to be representative of local conditions.</u></b> To verify the performance of the quaternary treatment concerning the reduction of micropollutants in urban wastewater discharges, it is sufficient to monitor a limited set of representative micropollutants. The monitoring frequencies should be aligned to the current best practices, as currently practiced in Switzerland. To remain cost-effective, those obligations should be adapted to the size of the urban wastewater treatment plants and of the agglomerations. The monitoring will also contribute to provide data for the overall Environmental Monitoring Framework as set up under the 8th Environmental Action Programme, and more specifically feed the Zero Pollution Monitoring Framework underpinning it.</p> |                                                                                     |             |

| 1. This Directive lays down rules on the collection, treatment, and discharge of urban wastewater, to protect the environment and human health while progressively <del>eliminating</del> <b>reducing</b> greenhouse gas emissions <del>to sustainable levels</del> and improving the energy balance of urban wastewater collection and treatment activities. It also lays down rules on access to sanitation, on transparency of the urban wastewater sector and on the regular surveillance of public health relevant parameters in urban wastewaters. | This Directive lays down rules on the collection, treatment, and discharge of urban wastewater, to protect the environment and human health <b>by progressive reduction of emissions to water and soil</b> while <b>contributing also to</b> progressively <del>eliminating</del> <b>reducing</b> greenhouse gas emissions <b>to sustainable levels</b> and improving the energy balance of urban wastewater collection and treatment activities. It also lays down rules <del>on access to sanitation, on transparency of the urban wastewater sector and on the regular surveillance of public health relevant parameters in urban wastewaters.</del> | <p>We miss the reference to zero-pollution objectives</p> <p>We support the idea of urban wastewater surveillance in relation to public health parameters in urban wastewater. However, this directive is not the right place to regulate such requirements.</p> <p>Although we support the overall objective on access to sanitation and SDG6, as well as surveillance of public health relevant parameters in urban wastewaters, we are of the opinion, that those requirements go beyond the scope of this Directive as they address human rights and health sector and also interfere with spatial planning and construction rules. In our opinion those requirements do</p> |

| <p>(8) 'combined sewer' means a <b>single</b> conduit <del>that that</del> <b>designed to</b> collect and conducts urban wastewater <b>including urban runoff</b>; <del>including urban runoff</del>;</p>                                                                                                                                                                                                                                          | <p>(8) 'combined sewer' means a <b>single conduit collecting system</b> <del>that that</del> <b>designed to</b> collect and conducts urban wastewater <b>including urban runoff</b>; <del>including urban runoff</del>;</p>                                                                                                                                                                                                                                          | <p>Please find below our previous comments on this point:</p> <p>Based on the proposed change we understand, that the collecting system that collects and conducts the mixture of domestic and non-domestic wastewater (no urban runoff) should be considered as 'combined sewer'. Is this interpretation correct?</p> <p>We would prefer definition of combined sewer in such a way, that it conducts such urban wastewater that always includes urban runoff. Hence, we propose:</p> <p>"combined sewer" means a collecting system that collects and conducts urban wastewater that includes urban runoff.</p> <p>With such definition it would be clear, that urban wastewater that is a mixture of domestic and non-domestic wastewater is collected and conducted through separate collecting system.</p> |
| <p>(9) 'separate sewer' means a <b>system of</b> conduits that separately collects and conducts <b>either urban runoff or either of the following</b>:</p> <p><del>(a) domestic urban wastewater not including urban runoff;</del></p> <p><del>(b) non-domestic wastewater <b>non-domestic wastewater</b>;</del></p> <p><del>(c) a mixture of domestic and non-domestic wastewater;</del></p> <p><del>(d) rainwater from agglomerations;</del></p> | <p>(9) 'separate sewer' means a <b>system of conduits collecting system</b> that separately collects and conducts <b>either urban runoff or either of the following</b>:</p> <p><del>(a) domestic urban wastewater not including urban runoff;</del></p> <p><del>(b) non-domestic wastewater <b>non-domestic wastewater</b>;</del></p> <p><del>(c) a mixture of domestic and non-domestic wastewater;</del></p> <p><del>(d) rainwater from agglomerations;</del></p> | <p>In our understanding individual "separate sewers" are connected through a "system of conduits" into a "collecting system". The same goes for combined sewer. We suggest aligning both definitions.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <p>2. <del>Unless they justify a derogation under paragraph 4 of Article 4,</del> By 31 December 2030 <del>2033</del>, Member States shall ensure that <del>all</del> agglomerations with a p.e. of between 1000 and 2000 p.e. comply with the following requirements of paragraph 1 by 31 December 2033:</p> <p><del>(a) they are provided with collecting systems;</del></p> <p><del>(b) all their sources of domestic urban wastewater are connected to a the collecting system.</del></p> <p>Member states may derogate from this deadline for maximum six years, if the conditions in Article 23(5) are met.</p> | <p>2. <del>Unless they justify a derogation under paragraph 4 of Article 4,</del> By 31 December 2030 <del>2033</del>, Member States shall ensure that <del>all</del> agglomerations with a p.e. of between 1000 and 2000 p.e. comply with the following requirements of paragraph 1 by 31 December 2033:</p> <p><del>(a) they are provided with collecting systems;</del></p> <p>(a) they are provided with collecting systems or combinaton of collecting systems and individual systems in cases where individual systems under Article 4 are justified;</p> <p><del>(b) all their sources of domestic urban wastewater are connected to a the collecting system.</del></p> <p>(b) all their sources of urban wastewater are connected to a collecting system, except in cases where individual systems under Article 4 are justified.</p> <p>Member states may derogate from this deadline for maximum six years, if the conditions in Article 23(5) are met.</p> | <p>We do not agree to a complete deletion of points a) and b). We are of the opinion that in case of smaller agglomerations (i.e. agglomerations between 1.000 and 2.000 p.e.) sufficient flexibility should be ensured for Member States to adapt the requirements to national specifics, such as geographic, orographic or other national or local conditions, or disproportionate costs. Namely, in particular circumstances a collecting system might not be the most cost-efficient solution and Member States should have sufficient flexibility to decide on the most appropriate solutions.</p> <p>Point b)</p> <p>From the same reason as explained in previous comment (geographic, orographic or other local conditions; disproportionate costs) it might not be possible for each source of domestic wastewater to be connected to the collecting system. Appropriate flexibility for Member States / possibility to allow for exemption at national or local level should be included, with appropriate reference to Article 4, where a derogation from Article 3 is already envisaged. However, the derogation in Article 4 only addresses establishment of a collection system as a whole, and does not allow for a derogation from the obligatory connection of a particular / single source of domestic wastewater where the collection system could be established or it is in place, but the connection of the source in question is for some reason not feasible.</p> <p>Derogations should be enabled in more than one 6-years cycles, not limited to one cycle, to enable prioritising the measures with a view of cost-efficiency as enabled for the Programme of Measures under the Water Framework Directive.</p> |

| <p>2. By 31 December <del>2025</del> <b>2027</b> <b>2030</b> Member States shall establish a list of agglomerations of between 10 000 p.e. and 100 000 p.e. where, considering historic data, <b>modelling</b> and state-of-the-art climate projections, one or more of the following conditions apply:</p> <p>(a) <del>sewer storm-water overflow</del> or <b><u>polluted discharges of urban runoff discharges</u></b> poses a risk to the environment or human health;</p> <p>(b) <del>sewer storm-water overflow</del> represents more than <del>1%-3%</del> of the annual collected urban wastewater load <b>of the parameters referred to in Tables 1 and, where relevant, Table 2 of Annex I</b>, calculated in dry weather <del>flow conditions</del>;</p> <p>(c) <del>sewer storm-water overflow</del> or <b><u>polluted discharges of urban runoff discharges</u></b> prevents the fulfilment of any of the following:</p> <p>(i) the requirements established under Article 5 of Directive (EU) 2020/2184;</p> <p>(ii) the requirements set out in Article 5(3) of Directive 2006/7/EC of the European Parliament and of the Council<sup>12</sup>;</p> <p>(iii) the requirements set out in Article 3 of Directive 2008/105/EC of the European Parliament and of the Council<sup>13</sup>;</p> <p>(iv) the environmental objectives set out in Article 4 of Directive 2000/60/EC.</p> <p><b>(v) the requirements established under Article 3 of Directive 2006/118/EC<sup>14</sup></b></p> <p>Member States shall review the list referred to in the first subparagraph every <del>five</del> <b>six</b> years after its establishment and update it where necessary.</p> <p><b><u>Following an update of the list, Member States shall ensure that integrated management plans are established for agglomerations within six years of their inclusion in that list.</u></b></p> | <p>2. By 31 December <del>2025</del> <b>2027</b> <b>2030</b> Member States shall establish a list of agglomerations of between 10 000 p.e. and 100 000 p.e. where, considering historic data, <b>modelling</b> and state-of-the-art climate projections, one or more of the following conditions apply:</p> <p>(a) <b><u>combined sewer storm-water overflow or polluted discharges of urban runoff discharges</u></b> poses a risk to <b>achieve the environmental objectives set in other Union legislation the environment or human health</b>;</p> <p>(b) <del>sewer storm-water overflow</del> represents more than <del>1%-3%</del> <b>of significant pressure considering</b> of the annual collected urban wastewater load <b>of the parameters referred to in Tables 1 and, where relevant, Table 2 of Annex I</b>, calculated in dry weather <del>flow conditions</del>;</p> <p>(c) <b><u>combined sewer storm-water overflow or polluted discharges of urban runoff discharges</u></b> prevents the fulfilment of any of the following:</p> <p>(i) the requirements established under Article 5 of Directive (EU) 2020/2184;</p> <p>(ii) the requirements set out in Article 5(3) of Directive 2006/7/EC of the European Parliament and of the Council<sup>15</sup>;</p> <p>(iii) the requirements set out in Article 3 of Directive 2008/105/EC of the European Parliament and of the Council<sup>16</sup>;</p> <p>(iv) the environmental objectives set out in Article 4 of Directive 2000/60/EC.</p> <p><b>(v) the requirements established under Article 3 of Directive 2006/118/EC<sup>17</sup></b></p> <p>Member States shall review the list referred to in the first subparagraph every <del>five</del> <b>six</b> years after its establishment and update it where necessary.</p> <p><b><u>Following an update of the list, Member States shall ensure that integrated management plans are established for agglomerations within six years of their inclusion in that list.</u></b></p> | <p>The expression 'historic data' should be clarified.</p> <p>Point a):</p> <p>Scrutiny</p> <p>We suggest using the term "combined sewer" as this conduct among all different conduits represents the largest risk for polluting the environment.</p> <p>We do not support using the term "polluted discharges". We consider such change as broadening of the scope.</p> <p>We would prefer linking the assessments to the existing mechanism under Water Framework Directive, which already requires to carry out risk assessment and determine significant pressures to comply with environmental objectives.</p> <p>Point b):</p> <p>We suggest to align point b) to the logic of risk assessment mechanisms under the Water Framework Directive.</p> <p>Point c):</p> <p>To our opinion this is already covered in point (a) by referring to risk, which mechanism requested under Water Framework Directive.</p> |

| <p>1. Member States shall ensure that energy audits of urban wastewater treatment plants and collecting systems are carried out every four years. Those audits shall be carried out in accordance with Article 8 of Directive 2012/27/EU and include an identification of the potential for cost-effective <b>measures to reduce the use of energy and or enhance the</b> production of renewable energy, with a particular focus to identify and utilise the potential for biogas production, while reducing <b>greenhouse gas</b> methane emissions. The first audits shall be carried out:</p> <p>(a) by 31 December <del>2025</del> <b>2030</b> for urban wastewater treatment plants treating a load of 100 000 p.e. and above and the collecting systems connected to them;</p> <p>(b) by 31 December <del>2030</del> <b>2035</b> for urban wastewater treatment plants treating a load of between 10 000 p.e. and 100 000 p.e. and the collecting systems connected to them.</p> |  |             |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                     |             |

| Member States shall ensure that the urban wastewater treatment plants built to comply with the requirements set out in Articles 6, 7, and 8 are designed, constructed, operated and maintained to ensure sufficient performance under all normal local climatic conditions. When designing the plants, seasonal variations of the load shall be taken into account. |             |             |

## ARTICLE 14 – DISCHARGES OF NON-DOMESTIC WASTEWATER

| <p><b>2.</b> The requirements referred to in paragraph 1 <b>of this Article</b> shall apply when the following conditions are fulfilled:</p> <p>(a) the wastewater originates from plants treating a load of 4 000 p.e. and above that belong to the industrial sectors listed in Annex IV and that do not carry out any of the activities listed in Annex I to Directive 2010/75/EU of the European Parliament and of the Council<sup>20</sup>;</p> <p>(b) the wastewater does not enter an urban wastewater treatment plant before it is discharged to receiving waters ('direct discharge').</p> | <p><b>2.</b> The requirements referred to in paragraph 1 <del>of this Article</del> shall apply when the following conditions are fulfilled:</p> <p>(a) the wastewater originates from plants treating a load of 4 000 p.e. and above that belong to the industrial sectors listed in Annex IV and that do not carry out any of the activities listed in Annex I to Directive 2010/75/EU of the European Parliament and of the Council<sup>21</sup>;</p> <p>(b) the wastewater does not enter an urban wastewater treatment plant before it is discharged to receiving waters ('direct <b>discharge release</b>').</p> | <p>The term 'plants' should be clarified. Does it mean industrial installations / facilities, or industrial wastewater treatment plants, or other.</p> <p>The provision should be clarified. Is the requirement applicable if the wastewater originates from one plant and it is treated in the treatment plant of (belonging to) another / separate plant?</p> <p>Considering that in water legislation direct or in-direct discharge has a specific meaning, we propose to align the wording with the IED and use 'direct release' instead.</p> |

20 Directive 2010/75/EU of the European Parliament and of the Council of 24 November 2010 on industrial emissions (integrated pollution prevention and control) (OJ L 334 17.12.2010, p. 17).

21 Directive 2010/75/EU of the European Parliament and of the Council of 24 November 2010 on industrial emissions (integrated pollution prevention and control) (OJ L 334 17.12.2010, p. 17).

## ARTICLE 17 – URBAN WASTEWATER SURVEILLANCE

|                                                                                    |             | <p>Scrutiny reservation.</p> <p>Although we support the overall objective on surveillance of public health relevant parameters in urban wastewaters, we are of the opinion, that those requirements go beyond the scope of this Directive as they address health sector. Therefore, those requirements do not fit in environmental legislation and should be addressed elsewhere. Any monitoring or surveillance that is primarily devoted to the protection of public health or enabling early warning in relation to public health should be included in the public health legislation.</p> |

| (28)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |             |                                                                                                                                                                                                                                                  |
| 1. Member States shall take the necessary measures to ensure that sludge management routes are conform to the waste hierarchy provided for in Article 4 of Directive 2008/98/EC. Such routes shall maximize prevention, <b>preparing for reuse, and recycling and other material recovery</b> of resources and minimize the adverse effects on the environment.                                                                                                                                                                                                                                                                                                                                                                                                        |             |                                                                                                                                                                                                                                                  |
| 2. The Commission is empowered to adopt <del>delegated</del> <b>implementing</b> acts <del>in accordance with the procedure referred to in Article 27 to supplement this Directive by setting out</del> <b>promoting to set out</b> the minimum reuse and recycling rates for phosphorus <del>and nitrogen</del> from <del>wastewater and</del> sludge, <del>and from urban wastewater not reused under the derogation of Article 15(1), taking in order to take into account available technologies,</del> <b>resources, and economic viability</b> for phosphorus <del>and nitrogen</del> recovery, <del>in sludge and wastewater</del> . Those <b>implementing acts shall be adopted in accordance with the examination procedure referred to in Article 28(2).</b> |             | <p>We do not support empowerment for that implementing act. We consider adoption of reuse and recycling rates as essential elements of the directive.</p> <p>It could be included as a revision clause followed by, if appropriate, the OLP.</p> |

## ARTICLE 21 – MONITORING

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |             |             |
| <p>2. For all agglomerations of 10 000 p.e. and above, Member States shall ensure that competent authorities, <b>appropriate bodies or operators of the collecting system</b> <del>monitor</del> <b>carry out sufficient representative monitoring of sewer</b> <del>the concentration and loads of pollutants from storm water overflows and</del> <b>polluted discharges of</b> urban runoff <del>discharged</del> into water bodies in order to be able to model the concentration and loads of the parameters listed in Table 1 and 2 of Annex I as well as the content of microplastics and relevant micropollutants in these discharges.</p> |             |             |

3. For all agglomerations of ~~above~~ 10 000 p.e. **and above**, Member States shall **ensure that competent authorities, appropriate bodies or the operator of the wastewater treatment plant** monitor, at the inlets and outlets of urban wastewater treatment plants, the concentration and loads in the urban wastewater of the following elements:

(a) pollutants **that are expected to be found in urban wastewaters** listed in:

(i) Annexes VIII and X to Directive 2000/60/EC, the Annex to Directive 2008/105/EC, Annex I to Directive 2006/118/EC and Part B of Annex II to Directive 2006/118/EC;

(ii) the Annex to Decision 2455/2001/EC of the European Parliament and of the Council<sup>24</sup>;

(iii) Annex II to Regulation (EC) No 166/2006 of the European Parliament and of the Council<sup>25</sup>;

(iv) Annexes I and II to Directive 86/278/EEC.

(b) parameters listed in Part B of Annex III to Directive (EU) 2020/2184, where urban wastewater is discharged in a catchment area referred to in Article 8 of that Directive;

(c) the presence of microplastics.

**[NEW] Pollutants listed under points (a) and (b) may be excluded from the monitoring under this paragraph as long as it can be demonstrated, inter alia on the basis of monitoring results, that they are absent in urban wastewaters.**

For all agglomerations of above 10 000 p.e., Member States shall **ensure that competent authorities, appropriate bodies or the operator of the wastewater treatment plant** monitor the presence of micro-plastics in the sludge **when relevant and, notably, when it is reused in agriculture.**

~~4. The monitoring referred to in the first and second sub~~  
**this** paragraphs **3** shall be carried out with the following frequencies:

(a) at least two samples per year, with maximum ~~6–7~~ months between the samples, for agglomerations of ~~100 000~~ **150.000** p.e. and ~~more~~ **above**;

(b) at least one sample every ~~2~~ **two** years for agglomerations of between 10 000 p.e. and 100 000 p.e.

**[NEW] The This monitoring frequency established in this paragraph may be halved in subsequent years if the monitoring results for the pollutants referred to in this paragraph 3 are below standards applicable**

Point i):

Does this provision include the lists of parameters for assessment of the chemical or ecological status, or also parameters from the watch lists?

Point b):

Does this provision include the lists of parameters for assessment of drinking water quality, or also parameters from the watch list?

#### **Paragraph (4):**

Special scrutiny on frequencies.

The requirement is too burdensome and disproportionate.

We suggest the approach from the Water framework directive.

The monitoring frequencies should follow the principle of 6-years cycles as it is the case for monitoring of water bodies under the Directive 2000/60/ES (WFD). That way, results of both monitoring would be comparable to follow the principle of combined approach.

The text marked with **[NEW]** is still too burdensome - special scrutiny.

| <p>1. Member States shall ensure that, in accordance with the relevant national legal system, members of the public concerned have access to a review procedure before a court of law, or another independent and impartial body established by law to challenge the substantive or procedural legality of decisions or acts or omissions subject to Articles 6, 7 or 8 of this Directive when at least one of the following conditions is met:</p> <p>(a) they have a sufficient interest;</p> <p>(b) they maintain the impairment of a right, where administrative procedural law of a Member State requires this as a precondition.</p> <p><b>Standing in the review procedure shall not be conditional on the role that the concerned member of the public played during a participatory phase of the decision-making procedures under this Directive.</b></p> <p>The review procedure shall be fair, equitable, timely and not prohibitively expensive, and shall provide for adequate and effective redress mechanisms, including injunctive relief as appropriate.</p> | <p><del>1. Member States shall ensure that, in accordance with the relevant national legal system, members of the public concerned have access to a review procedure before a court of law, or another independent and impartial body established by law to challenge the substantive or procedural legality of decisions or acts or omissions subject to Articles 6, 7 or 8 of this Directive when at least one of the following conditions is met:</del></p> <p><del>(a) they have a sufficient interest;</del></p> <p><del>(b) they maintain the impairment of a right, where administrative procedural law of a Member State requires this as a precondition.</del></p> <p><del>Standing in the review procedure shall not be conditional on the role that the concerned member of the public played during a participatory phase of the decision-making procedures under this Directive.</del></p> <p><del>The review procedure shall be fair, equitable, timely and not prohibitively expensive, and shall provide for adequate and effective redress mechanisms, including injunctive relief as appropriate.</del></p> | <p>Although we support the overall objective on access to justice, we have reservation regarding inclusion of this article. In our opinion a recital referring to the Aarhus convention would be sufficient.</p> |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                  |

| (35)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1. The power to adopt delegated acts is conferred on the Commission subject to the conditions laid down in this Article.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |             | <p>We are hesitant regarding numerous delegated acts that are envisaged. The proposed empowerments of the Commission to adopt several delegated acts should be further discussed since they might touch upon essential elements of the directive.</p> <p>The deadline for objection by the European Parliament or by the Council in paragraph 6 should be extended from 2 to 3 months, with the possibility to be extended by additional 3 months, as it is already the case in some other legislative acts.</p> |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2. The power to adopt delegated acts referred to in Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), and 24(3) shall be conferred on the Commission for a period of five years from [OP please insert the date = the date of entry into force of this Directive]. The Commission shall draw up a report in respect of the delegation of power not later than nine months before the end of the five-year period. The delegation of power shall be tacitly extended for periods of an identical duration unless the European Parliament or the Council opposes such extension not later than three months before the end of each period. |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <p>3. The delegation of power referred to in Articles 4(3), <del>6(3)</del>, 7(4), 8(5), 14(3), 20(2), and 24(3) may be revoked at any time by the European Parliament or by the Council. A decision to revoke shall put an end to the delegation of the power specified in that decision. It shall take effect the day following the publication of the decision in the Official Journal of the European Union or at a later date specified therein. It shall not affect the validity of any delegated acts already in force.</p>                                                                 |             |             |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |             |             |
| <p>4. Before adopting a delegated act, the Commission shall consult experts designated by each Member State in accordance with the principles laid down in the Interinstitutional Agreement of 13 April 2016 on Better Law-Making.</p>                                                                                                                                                                                                                                                                                                                                                             |             |             |

| Every five years, the Commission shall present a report to the European Parliament and the Council on the implementation of this Directive, accompanied, where the Commission finds it appropriate, by relevant legislative proposals. | Every <del>five</del> <b>six</b> years, the Commission shall present a report to the European Parliament and the Council on the implementation of this Directive, accompanied, where the Commission finds it appropriate, by relevant legislative proposals. | It would be reasonable to change these cycles to 6 years as it is the case for other revisions, that are requested, and in line with the WFD. |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                   |                     |
| <p>(2) Directive 91/271/EEC sets the legal framework for the collection, treatment and discharge of urban wastewater and the discharge of biodegradable wastewaters from certain industrial sectors. <b><u>Urban wastewaters can be formed by different mixtures of domestic wastewaters, urban runoff and non-domestic wastewater from other origins. Wastewater from institutions such as offices, schools, kitchens with food preparation, etc. which are predominantly originated from the human metabolism, qualifies as domestic wastewaters as well.</u></b> Its objective is to protect the environment from being adversely affected by insufficiently treated urban wastewater discharges. This Directive should continue to pursue the same objective, whilst also contributing to the protection of public health, when for instance urban wastewater is discharged in bathing waters or in water bodies used for the abstraction of drinking water, or when urban wastewater is used as an indicator for parameters relevant for public health. It should also improve access to sanitation and to key information related to the governance of the urban wastewater collection and treatment activities. Finally, this Directive should contribute to the progressive <del>elimination</del> <b>reduction</b> of greenhouse gas (GHG) emissions from urban wastewater collection and treatment activities, <del>notably by further reducing nitrogen emissions</del> but also by promoting energy efficiency and production of renewable energies, and thus should contribute to the 2050 objective of Climate</p> |                   | Adaptation welcomed |

| Neutrality established under Regulation (EU) 2021/1119 of the European Parliament and of the Council <sup>1</sup> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                   |                                                                                                                                                                        |
| (5) In order to ensure effective treatment of urban wastewater before discharge into the environment, all urban wastewaters from agglomerations of 1 000 p.e. and above should be collected in centralised collecting systems, <b><u>unless they justify a derogation for the use of individual systems under paragraph 1 of Article 4.</u></b> <b><u>When delineating their agglomerations, Member States should take into account the indicative reference threshold of 10 to 25 p.e. per hectare above which the population, possibly combined with economic activities, located in a specific area are considered sufficiently concentrated.</u></b> Where <del>centralised collecting</del> <del>such</del> systems are already in place, Member States should ensure that all sources of urban wastewater are connected to them.                                                                                                                                                                                 |                   | Adaptation welcomed                                                                                                                                                    |
| (6) <del>Exceptionally, where</del> <b><u>Where</u></b> it can be demonstrated that the establishment of a centralised urban wastewater collecting system would produce no environmental benefit, <b><u>would not be technically feasible,</u></b> or <b><u>would</u></b> involve excessive costs, Member States should be allowed to use individual systems to <b><u>collect and</u></b> treat urban wastewater, as long as they ensure the same level of <b><u>protection of the environment</u></b> <del>treatment as secondary and tertiary treatment</del> . For this purpose, Member States should establish national registers to identify individual systems used on their territory and take all necessary measures to ensure that the design of such systems is adequate, that the systems are properly maintained and that they are subject to a regular compliance control. In particular, Member States should ensure that individual systems used for the collection and storage of urban wastewater are |                   | Adaptation welcomed.<br><br>Remark. In Art. 4(3new) – a reference is made to “national, regional or local register”. It should be considered to clarify in the Recital |

|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|----------------------------------------------------|
| <p>impervious and leak-proof, and that monitoring and inspection of the systems are carried out at regular and fixed intervals. <b><u>Where individual systems are used to collect and treat more than 2% of the urban wastewater load at national level from agglomerations of 2 000 p.e. and above, Member States should provide the Commission with justifications for the reasons for the use of individual systems instead of collecting systems, the level of compliance of those systems with established standards under this Directive and measures taken to reduce the use of such systems. The Commission should be empowered to adopt implementing acts to establish the format of the reporting and the level of details of the information to be provided by national authorities.</u></b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |                                                    |
| <p>(7) During rainfall, storm water overflows and urban runoff represent a sizeable remaining source of pollution discharged into the environment. Those emissions are expected to increase due to the combined effects of urbanisation and progressive change of the rain regime linked with climate change. Solutions to reduce that source of pollution should be defined at local level taking into account the specific local conditions. They should be based on an integrated quantitative and qualitative water management in urban areas. Therefore, Member States should ensure that integrated urban wastewater management plans are established at local level for all agglomerations of 100 000 p.e. and above as those agglomerations are responsible for a significant share of the pollution emitted. Furthermore, integrated urban wastewater management plans should also be put in place for agglomeration of between 10 000 p.e. and 100 000 p.e. where storm water overflows or urban runoff poses a risk for the environment or public health. <b><u>In order to ensure an adequate coverage of the integrated management plans and a comprehensive solution to storm water problems, they should be established for each urban wastewater drainage area of the concerned agglomerations.</u></b></p> |                                                                                     | <p>Remark. Drainage area is not in definitions</p> |

|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|-------------------|
| <p><b>(8 bis)</b> In order to protect the environment, in particular the coastal and marine environment, and public health from being adversely affected by the discharge of insufficiently treated urban wastewater, secondary treatment should be applied to all discharges of urban wastewater from agglomerations of 1 000 p.e. and above. <b><u>Nevertheless enough time should be given to Member States to adapt their treatment infrastructures for agglomerations discharging their wastewaters into 'less sensitive areas' in coastal areas where 'appropriate treatment' is applied as defined in Council Directive 91/271/EEC. This adaptation time should be expanded in the case of Madeira due to the difficulty to install secondary treatment due to the specific geographical condition of the island.</u></b></p>                                                                                                                                                                                                                        |                   |                   |
| <p>(11) Recent scientific knowledge underpinning several Commission strategies<sup>2</sup> highlight the need to take action to address the issue of micropollutants, which are now detected <b><u>usually</u></b> in all waters in the Union. Some of those micropollutants are hazardous for public health and the environment even in <b><u>small quantities low concentrations of micrograms per litre or below</u></b>. An additional treatment, i.e. quaternary treatment, should therefore be introduced in order to ensure that a large spectrum of micropollutants is removed from urban wastewater. Quaternary treatment should first focus on organic micropollutants, which represent a significant part of the pollution and for which removal technologies are already designed. The treatment should be imposed based on the precautionary approach combined with a risk-based approach. Therefore, all urban wastewater treatment plants of 100 000 p.e. and above should provide quaternary treatment, as those facilities represent a</p> |                   |                   |

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>significant share of micropollutant discharges in the environment and the removal of micropollutants by urban wastewater treatment plants at such scale is cost-effective. For agglomerations of between 10 000 p.e. and 100 000 p.e., Member States should be required to apply quaternary treatment to areas identified as sensitive to pollution with micropollutants based on clear criteria, which should be specified. Such areas should include locations where treated urban wastewater discharge to water bodies result in low dilution ratios, or where the receiving water bodies are used for the production of drinking water or as bathing waters. In order to avoid the requirement of quaternary treatment for agglomerations of between 10 000 p.e. and 100 000 p.e., Member States should be required to demonstrate the absence of risks to the environment or to public health on the basis of a standardised risk assessment. In order to give Member States enough time to plan and deliver the necessary infrastructures, the requirement of quaternary treatment should progressively apply until 2040 with clear interim objectives.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <p>(16) The evaluation has also shown that the wastewater treatment sector offers the opportunity to significantly reduce its own energy consumption and to produce renewable energy, for example by better use of the available surfaces in urban wastewater treatment plants for solar energy production or by producing biogas from sludge. The evaluation also illustrated that, without clear legal obligations, only partial progress can be expected in this sector. In this context, Member States should be required to ensure that the total annual energy used by all urban wastewater treatment plants on their national territory treating a load of 10 000 p.e. and above does not exceed the production of energy from renewable sources as defined in Article 2(1) of Directive (EU) 2018/2001 of the European Parliament and of the Council<sup>3</sup>, by those urban wastewater treatment plants. <b>In order to take into</b></p>                                                                                                                                                                                                               | <p><b>In order to take into account the specificities of each urban wastewater treatment plant, optimise the investments needed and provide for the required flexibility, objective is that energy produced by urban wastewater treatment plant is utilized in order to reduce external energy consumption. <del>to reach the abovementioned objective, while ensuring that the potential for renewable energy production and for energy savings is fully seized, the energy neutrality</del></b></p> | <p>Remark: it is clear that stricter treatment criteria will represent enormous energy and material consumption. In overall. It is expected that demand for energy in this segment of economy (WWT) will increase significantly over the next 10-15 years.</p> <p>Slovakia does not support any requirements of energy neutrality of WWTP. The directive addresses the urban waste water treatment. Indeed, each WWTP should target energy efficiency, WWTP is constructed to treat wastewater. The long term objective should be that all energy that WWT produces is utilized.</p> |

<sup>3</sup> Directive (EU) 2018/2001 of the European Parliament and of the Council of 11 December 2018 on the promotion of the use of energy from renewable sources (OJ L 328, 21.12.2018, p. 82).

|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| <p><u>account the specificities of each urban wastewater treatment plant, optimise the investments needed and provide for the required flexibility to reach the abovementioned objective, while ensuring that the potential for renewable energy production and for energy savings is fully seized, the energy neutrality objective should be met at national level and not for each treatment plant. All renewable energies produced by the urban wastewater treatment plant or from the transformation of urban wastewater residues, whether on-site or off-site, such as hydraulic, solar, thermal, wind energy or biogas, should be taken into account. A maximum share of 25% of renewable energy, not directly linked to urban wastewater treatment activities, may be purchased or produced from external sources.</u> That objective should be progressively met with interim targets by 31 December 2040. Reaching this energy neutrality target will contribute to reduce the avoidable greenhouse gas (GHG) emissions from the sector by 46 %, while supporting the achievement of the 2050 climate neutrality objectives and related national and Union objectives, such as the objectives set out in Regulation (EU) 2018/842 of the European Parliament and of the Council<sup>4</sup>. Encouraging EU-based biogas or solar energy production while enhancing energy efficiency measures in line with the Energy Efficiency First principle<sup>5</sup>, which means taking utmost account of cost-efficient energy efficiency measures in shaping energy policy and making relevant investment decisions, will also help reduce the Union energy dependence, one of the objectives expressed in the Commission "Repower EU" Plan<sup>6</sup>. It is also in line with Directive (EU) 2018/844 of the European</p> | <p><del>objective should be met at national level and not for each treatment plant. | <p>to ensure that collecting systems and urban wastewater treatment plants are technically capable of receiving and treating the incoming pollution, the operators who manage urban wastewater treatment plants receiving non-domestic wastewater should be consulted before those permits are issued and should be able to consult the issued permits in order to be able to adapt their treatment processes. Where non-domestic pollution is identified in the incoming waters, Member States should take appropriate measures to reduce pollution at source, by enhancing the monitoring of pollutants in collecting systems so that the pollution sources can be identified and, where necessary, by reviewing the authorisations provided to relevant, connected urban wastewater treatment plants.</p>                                                                                                                                                                                                                                                                                                                                                         |                   |                   |
| <p><del>(18)</del> <b>(19 bis)</b> The water resources of the Union are increasingly under pressure, resulting in permanent or temporary water scarcity in some areas of the Union. The Union's ability to respond to the increasing pressures on water resources could be improved through a wider reuse of treated urban wastewater, limiting freshwater abstraction from surface and groundwater bodies. Therefore, the reuse of treated urban wastewater should be encouraged and applied whenever appropriate, whilst taking into account the need to ensure that the objectives of good ecological and chemical status of the receiving bodies, as defined in Directive 2000/60/EC, are met. The reinforcement of the requirements for the treatment of urban wastewater, and the actions to better monitor, track and reduce pollution at source, will have impacts on the quality of treated urban wastewater, and will therefore support water reuse. Where water reuse serves the purpose of agricultural irrigation, it should be carried out in accordance with Regulation (EU) 2020/741 of the European Parliament and of the Council <sup>9</sup>.</p> |                   |                   |
| <p>(28) The evaluation concluded that sludge management could be improved to better align it with the principles of the</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                   |                   |

<sup>9</sup> Regulation (EU) 2020/741 of the European Parliament and of the Council of 25 May 2020 on minimum requirements for water reuse (OJ L 177, 5.6.2020, p. 32).

| <p>circular economy and of the waste hierarchy as defined in Article 4 of Directive 2008/98/EC. The actions to better monitor and reduce pollution at source from non-domestic discharges will help improving the quality of the sludge produced and ensure its safe use in agriculture. In order to ensure a proper and safe recovery of nutrients, including the critical substance phosphorus, from the sludge, minimum recovery rates should be defined at Union level.</p> <p><b><u>The recovered nutrients shall be used as substitutes for primary nutrients, for example, in the production of fertilizers.</u></b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                   |                     |
| <p>(29) <del>Additional</del> <b><u>Adequate</u></b> monitoring is necessary to verify compliance with the new requirements concerning micropollutants, non-domestic pollution, energy neutrality, GHG emissions, <del>storm-water</del> <b><u>sewer</u></b> overflows and <b><u>polluted</u></b> urban runoff <b><u>discharges</u></b>. <b><u>Microplastics and relevant micropollutants should be monitored, where relevant, in sewer overflow discharges with a representative sampling programme which would inform concentration adopted for water quality modelling. This monitoring should be updated on a regular basis to ensure the modelling continues to be representative of local conditions.</u></b> To verify the performance of the quaternary treatment concerning the reduction of micropollutants in urban wastewater discharges, it is sufficient to monitor a limited set of representative micropollutants. The monitoring frequencies should be aligned to the current best practices, as currently practiced in Switzerland. To remain cost-effective, those obligations should be adapted to the size of the urban wastewater treatment plants and of the agglomerations. The monitoring will also contribute to provide data for the overall Environmental Monitoring Framework as set up under the 8th Environmental Action Programme, and more specifically feed the Zero Pollution Monitoring Framework underpinning it.</p> |                   | Adaptation welcomed |
| <p>(36) In order to ensure uniform conditions for the implementation of this Directive, implementing powers should be conferred on the Commission for the adoption of standards for the design of individual systems, for the</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                   |                     |

|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| (4) 'agglomeration' means an area where the <b>population (expressed in population equivalent), combined or not with and/or economic activities</b> <del>pollution load of urban wastewater is sufficiently concentrated (taking as a reference 10 p.e. per hectare or above)</del> for urban wastewater to be collected and conducted to <b>one or more</b> <del>an</del> urban wastewater treatment plants or to a <b>one or more</b> final discharge points, <u>into receiving waters</u> ; |                   | Adaptation welcomed<br><br>Remark. In the definition, it should be specified that the directive covers agglomerations of 1,000 pe and more. |
| (5) 'urban runoff' means <b>precipitation rainwater</b> from agglomerations collected by combined or separate sewers;                                                                                                                                                                                                                                                                                                                                                                          |                   |                                                                                                                                             |
| (6) ' <del>sewer storm water</del> overflow' means discharge of untreated urban wastewater <del>into</del> receiving waters from <b>separate or</b> combined sewers <del>caused by rainfall</del> ;                                                                                                                                                                                                                                                                                            |                   |                                                                                                                                             |
| (7) 'collecting system' means a system of conduits which collects and conducts urban wastewater;                                                                                                                                                                                                                                                                                                                                                                                               |                   |                                                                                                                                             |
| (8) 'combined sewer' means a <b>single</b> conduit <del>that that designed to</del> collects and conducts urban wastewater <u>including urban runoff</u> ; <del>including urban runoff</del> ;                                                                                                                                                                                                                                                                                                 |                   |                                                                                                                                             |
| (9) 'separate sewer' means a <b>system of</b> conduits that separately collects and conducts <b>either urban runoff or</b> <del>either of the following</del> :<br><br>(a) <del>domestic</del> <b>urban</b> wastewater <b>not including urban runoff</b> ;<br><br>(b) <del>non-domestic wastewater</del> <b>non-domestic wastewater</b> ;<br><br>(c) <del>a mixture of domestic and non-domestic wastewater</del> ;<br><br>(d) <del>rainwater from agglomerations</del> ;                      |                   |                                                                                                                                             |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                  | Slovakia proposal | Slovakia comments                                                                                                                                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| (10) <del>'1 population equivalent' or '(1 p.e.)' means the unit expressing the average potential water pollution load caused by one person per day, where 1 p.e. is the organic biodegradable load per day having a five-day biochemical oxygen demand (BOD5) of 60 g of oxygen per day per day;</del>                                                          |                   | Remark: keep "per day" as it was (the organic biodegradable load per day). It might confuse translations.                                                                                                    |
| <b>(10 bis) [NEW] 'primary treatment' means treatment of urban wastewater by a physical and/or chemical process involving settlement of suspended solids, or other processes in which the BOD5 of the incoming wastewater is reduced by at least 20% before discharge and the total suspended solids of the incoming wastewater are reduced by at least 50%.</b> |                   | Remark. The ambition of the directive is to have secondary treatment as the basic requirement. What are the cases that "primary treatment" would be used? Primary treatment is not addressed in any article. |
| (11) 'secondary treatment' means treatment of urban wastewater by a process generally involving biological treatment with a secondary settlement or another process <del>which reduces removes most of biodegradable organic matter in from</del> <b>urban wastewater;</b>                                                                                       |                   |                                                                                                                                                                                                              |
| (12) 'tertiary treatment' means treatment of urban wastewater by a process which <del>reduces removes most of by a process which removes</del> <b>nitrogen and/or phosphorus from the urban wastewaters;</b>                                                                                                                                                     |                   | Adaptation welcomed                                                                                                                                                                                          |
| (13) 'quaternary treatment' means treatment of urban wastewater by a process which <del>removes reduces</del> <b>a broad spectrum of micropollutants in from the from</b> urban wastewaters;                                                                                                                                                                     |                   | Adaptation welcomed                                                                                                                                                                                          |
| (14) 'sludge' means <del>any solid, semisolid, or liquid waste organic residue and inorganic sludge-residue</del> <b>resulting from the treatment of urban wastewater in an urban wastewater treatment plant (excluding debris, grit, grease, other debris and any other screenings residues from the first pre-treatment step);</b>                             |                   | Adaptation welcomed                                                                                                                                                                                          |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                                                                         | Slovakia proposal | Slovakia comments |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|-------------------|
| (15) 'eutrophication' means the enrichment of water by nutrients, especially compounds of nitrogen and/or phosphorus, causing an accelerated growth of algae and higher forms of plant life to produce an undesirable disturbance to the balance of organisms present in the water and to the quality of the water concerned;                                                                                           |                   |                   |
| (16) 'micropollutant' means a substance, including its breakdown products, <del>that is usually present in the environment and urban wastewaters in low concentrations below milligrams per litre and</del> which can be considered hazardous to human health or the environment based on any of the <b>relevant</b> criteria set out in Part 3 and Part 4 of Annex I to Regulation EC <b>1272/2008</b> <sup>11</sup> ; |                   |                   |
| (17) 'dilution ratio' means the ratio <del>of between the last five years average volume</del> of annual flow of the receiving waters at the point of discharge <del>and to the last five years average of the annual discharge volume of urban wastewater into surface waters; discharged from a treatment plant;</del>                                                                                                |                   |                   |
| (18) 'producer' means any manufacturer, importer or distributor that on a professional basis places products on the market of a Member State, including by means of distance contracts as defined in Article 2(7) of Directive 2011/83/EU means;                                                                                                                                                                        |                   |                   |
| (19) 'Producer Responsibility Organisation' means <del>an</del> <b>nationally recognised</b> organisation established collectively by producers for the purpose of fulfilling their obligations under Article 9 <b>and 10</b> ;                                                                                                                                                                                         |                   |                   |
| (20) 'sanitation' means facilities and services for the safe disposal of human urine, faeces, and menstrual blood;                                                                                                                                                                                                                                                                                                      |                   |                   |

<sup>11</sup> Regulation EC 1272/2008 of the European Parliament and of the Council on classification, labelling and packaging of substances and mixtures (OJ L 353 31.12.2008, p 1).

| <p>1. Member States shall ensure that energy audits of urban wastewater treatment plants and collecting systems are carried out every four years. Those audits shall be carried out in accordance with Article 8 of Directive 2012/27/EU and include an identification of the potential for cost-effective <b>measures to reduce the use of energy</b> and or <b>enhance the</b> production of renewable energy, with a particular focus to identify and utilise the potential for biogas production, while reducing <b>greenhouse gas</b> methane emissions. The first audits shall be carried out:</p> <p>(a) by 31 December <del>2025</del> <b>2030</b> for urban wastewater treatment plants treating a load of 100 000 p.e. and above and the collecting systems connected to them;</p> <p>(b) by 31 December <del>2030</del> <b>2035</b> for urban wastewater treatment plants treating a load of between 10 000 p.e. and 100 000 p.e. and the collecting systems connected to them.</p> |  | <p>Remark. Many WWTPs of 10,000 – 100,000 will be under re-construction/modernization in period 2025 - 2040 to meet stricter limits. What would be a value of the “audit” prescribed for 2030 and 2035?</p> |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                     |                                                                                                                                                                                                             |

| 3. Member States shall update their national implementation programmes at least every <del>5</del> <b>6</b> years. They shall submit them to the Commission by 31 December, except where they can demonstrate that they are in compliance with Articles 3 to 8.                                                                                                                                                            |                   |                   |
|                                                                                                                                                                                                                                                                                                                                                                                                                            |                   |                   |
| 4. The Commission is empowered to adopt implementing acts establishing the methods and formats for submission of the national implementation programmes. Those implementing acts shall be adopted in accordance with the examination procedure referred to in Article 28(2) <b><u>no later than [OP please insert the date = the last day of the sixth month from the date of entry into force of this Directive].</u></b> |                   |                   |
|                                                                                                                                                                                                                                                                                                                                                                                                                            |                   |                   |

**5. Member States may include in their first national implementation programmes an extension of maximum six years of the following deadlines:**

**(a) the deadlines referred to in Article 3(2) and/or in Article 6(2) on the conditions that:**

**(i) less than 50 % of these agglomerations are provided with collecting systems and are not subject to secondary treatment on [OP please insert the date=day of entry into force of the Directive]; and**

**(ii) the national implementation programme includes:**

**- the number of agglomerations between 1 000 and 2 000 p.e. that lacks a collecting system and secondary treatment on [OP please insert the date=day of entry into force of the Directive]; and**

**- a plan detailing the necessary investments to reach full compliance for these agglomerations within the extended deadlines;**

**(b) the deadline for agglomerations referred to in Article 7(3) on the conditions that:**

**(i) at least 50 % of these agglomerations are not applying tertiary treatment on [OP please insert the date=day of entry into force of the Directive]; and**

**(ii) the national implementation programme includes:**

**- the number of agglomerations referred to in Article 7(3) lacking tertiary treatment on [OP please insert the date=day of entry into force of the Directive]; and**

**- a plan detailing the necessary investments to reach full compliance for these agglomerations within the extended deadlines;**

**The extensions of these deadlines shall be effective only if the above-mentioned conditions are fulfilled. The Commission shall notify the Member States if**

| 1. The power to adopt delegated acts is conferred on the Commission subject to the conditions laid down in this Article.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |                           |
| 2. The power to adopt delegated acts referred to in Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), and 24(3) shall be conferred on the Commission for a period of five years from [OP please insert the date = the date of entry into force of this Directive]. The Commission shall draw up a report in respect of the delegation of power not later than nine months before the end of the five-year period. The delegation of power shall be tacitly extended for periods of an identical duration unless the European Parliament or the Council opposes such extension not later than three months before the end of each period. |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |                           |
| 3. The delegation of power referred to in Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), and 24(3) may be revoked at any time by the European Parliament or by the Council. A decision to revoke shall put an end to the delegation of the power specified in that decision. It shall take effect the day following the publication of the decision in the Official Journal of the European Union or at a later date specified therein. It shall not affect the validity of any delegated acts already in force.                                                                                                                      |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |                           |
| 4. Before adopting a delegated act, the Commission shall consult experts designated by each Member State in accordance with the principles laid down in the Interinstitutional Agreement of 13 April 2016 on Better Law-Making.                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |                           |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | [Insert MS name] proposal | [Insert MS name] comments |

| 5. As soon as it adopts a delegated act, the Commission shall notify it simultaneously to the European Parliament and to the Council.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |                           |
| 6. A delegated act adopted pursuant to Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), or 24(3) shall enter into force only if no objection has been expressed either by the European Parliament or by the Council within a period of two months of notification of that act to the European Parliament and the Council or if, before the expiry of that period, the European Parliament and the Council have both informed the Commission that they will not object. That period shall be extended by two months at the initiative of the European Parliament or of the Council. |                           |                           |

| <p>1. By 31 December 2030 and by 31 December 2040, the Commission shall carry out an evaluation of this Directive based in particular on the following elements:</p> <p>(a) the experience gained through the implementation of this Directive;</p> <p>(b) the data sets referred to in Article 22(1);</p> <p>(c) relevant scientific, analytical and epidemiological data, including results from research projects funded by the Union;</p> <p>(d) WHO recommendations, where available;</p> <p>(e) an analyse of the possible need to adapt the list of products to be covered by extended producer responsibility to the evolution of the range of products placed on the market, improved knowledge on the presence of micropollutants in wastewaters and their impacts on public health and the environment, and data resulting from the new monitoring obligations on micropollutants in the inlets and outlets of the urban wastewater treatment plants.</p> <p>The Commission shall present a report on the main findings of the evaluation referred to in the first subparagraph to the European Parliament, the Council, the European Economic and Social Committee, and the Committee of the Regions.</p> |                   | <p>This represents a significant burden on administration.</p> <p>Also, it is too early to carry out an evaluation in 2030 - many requirements are just to be applied and some requirements will be applied in horizon 2035-2045. We can support the "preliminary" evaluation in 2030, in case if the evaluation report will be produced purely from information reported by member states in line with Art. 21, 23 and 33 and no additional data will be requested.</p> |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |                           |                           |
| <p>4. The treated <u>urban</u> wastewater shall be assumed to conform to the relevant parameters if, for each relevant parameter considered individually, samples of the water show that it complies with the relevant parametric value in the following way:</p> <p>(a) for the parameters specified in Table 1, a maximum number of samples which are allowed to fail the requirements, expressed in concentrations and/or percentage reductions, is specified in Table 4;</p> <p>(b) for the parameters of Table 1 expressed in concentrations, the failing samples taken under normal operating conditions must not deviate from the parametric values by more than 100 %, except for the parameter total suspended solids, for which deviations from the parametric values of up to 150 % may be accepted;</p> <p>(c) for those parameters specified in Table 2 the annual mean of the samples for each parameter shall be conform to the relevant parametric values set out in that table. One or both parameters may be applied depending on the local situation. The values for concentration or for the minimum percentage of reduction shall apply;</p> <p>(d) for the parameters specified in Table 3, each sample taken shall be conform to the parametric values set out in that table.</p> |  |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |                           |                           |

| 3. The measures to be taken to achieve the objectives referred to in point 2 accompanied with a clear identification of the actors involved and their responsibilities in the <del>implantation</del> <b>implementation</b> of the integrated plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                           |                           |
| <p>4. When assessing which measures to be taken under point 3, Member States shall ensure that their competent authorities consider at least the following:</p> <p>(a) firstly, preventive measures aiming at avoiding the entry of unpolluted rain waters into collecting systems, including measures promoting natural water retention or rainwater harvesting, and measures increasing green spaces or limiting impermeable surfaces in the agglomerations;</p> <p>(b) secondly, measures to better manage and optimize the use of existing infrastructure including collecting systems, storage volumes, urban wastewater treatment plants with the aim to ensure that polluted rain waters are collected and treated, and releases of untreated urban wastewater into receiving waters are minimised;</p> <p>(c) finally, where necessary to achieve the objectives referred to in point 2, additional mitigation measures including the adaptation of the infrastructure for the collection, storage and treatment of urban wastewater or the creation of new infrastructures with a priority to green infrastructure such as vegetated ditches, treatment wetlands and storage ponds designed in order to support biodiversity. Where relevant, water reuse shall be considered in the context of the development of the integrated urban wastewater management plans referred to in Article 5.</p> |                           |                           |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                  |                  |
| <p>(2) Directive 91/271/EEC sets the legal framework for the collection, treatment and discharge of urban wastewater and the discharge of biodegradable wastewaters from certain industrial sectors. <b><u>Urban wastewaters can be formed by different mixtures of domestic wastewaters, urban runoff and non-domestic wastewater from other origins. Wastewater from institutions such as offices, schools, kitchens with food preparation, etc. which are predominantly originated from the human metabolism, qualifies as domestic wastewaters as well.</u></b> Its objective is to protect the environment from being adversely affected by insufficiently treated urban wastewater discharges. This Directive should continue to pursue the same objective, whilst also contributing to the protection of public health, when for instance urban wastewater is discharged in bathing waters or in water bodies used for the abstraction of drinking water, or when urban wastewater is used as an indicator for parameters relevant for public health. It should also improve access to sanitation and to key information related to the governance of the urban wastewater collection and treatment activities. Finally, this Directive should contribute to the progressive <del>elimination</del> <b>reduction</b> of greenhouse gas (GHG) emissions from urban wastewater collection and treatment activities, <del>notably by further reducing nitrogen emissions</del> but also by promoting energy efficiency and production of renewable energies, and thus should contribute to the 2050 objective of Climate</p> |                  |                  |

| <p>impervious and leak-proof, and that monitoring and inspection of the systems are carried out at regular and fixed intervals. <b><u>Where individual systems are used to collect and treat more than 2% of the urban wastewater load at national level from agglomerations of 2 000 p.e. and above, Member States should provide the Commission with justifications for the reasons for the use of individual systems instead of collecting systems, the level of compliance of those systems with established standards under this Directive and measures taken to reduce the use of such systems. The Commission should be empowered to adopt implementing acts to establish the format of the reporting and the level of details of the information to be provided by national authorities.</u></b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |                  |
| <p>(7) During rainfall, storm water overflows and urban runoff represent a sizeable remaining source of pollution discharged into the environment. Those emissions are expected to increase due to the combined effects of urbanisation and progressive change of the rain regime linked with climate change. Solutions to reduce that source of pollution should be defined at local level taking into account the specific local conditions. They should be based on an integrated quantitative and qualitative water management in urban areas. Therefore, Member States should ensure that integrated urban wastewater management plans are established at local level for all agglomerations of 100 000 p.e. and above as those agglomerations are responsible for a significant share of the pollution emitted. Furthermore, integrated urban wastewater management plans should also be put in place for agglomeration of between 10 000 p.e. and 100 000 p.e. where storm water overflows or urban runoff poses a risk for the environment or public health. <b><u>In order to ensure an adequate coverage of the integrated management plans and a comprehensive solution to storm water problems, they should be established for each urban wastewater drainage area of the concerned agglomerations.</u></b></p> |                                                                                     |                  |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Finland proposal | Finland comments |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|------------------|
| <p><b>(8 bis)</b> In order to protect the environment, in particular the coastal and marine environment, and public health from being adversely affected by the discharge of insufficiently treated urban wastewater, secondary treatment should be applied to all discharges of urban wastewater from agglomerations of 1 000 p.e. and above. <b><u>Nevertheless enough time should be given to Member States to adapt their treatment infrastructures for agglomerations discharging their wastewaters into 'less sensitive areas' in coastal areas where 'appropriate treatment' is applied as defined in Council Directive 91/271/EEC. This adaptation time should be expanded in the case of Madeira due to the difficulty to install secondary treatment due to the specific geographical condition of the island.</u></b></p>                                                                                                                                                                                                                        |                  |                  |
| <p>(11) Recent scientific knowledge underpinning several Commission strategies<sup>2</sup> highlight the need to take action to address the issue of micropollutants, which are now detected <b><u>usually</u></b> in all waters in the Union. Some of those micropollutants are hazardous for public health and the environment even in <b><u>small quantities low concentrations of micrograms per litre or below</u></b>. An additional treatment, i.e. quaternary treatment, should therefore be introduced in order to ensure that a large spectrum of micropollutants is removed from urban wastewater. Quaternary treatment should first focus on organic micropollutants, which represent a significant part of the pollution and for which removal technologies are already designed. The treatment should be imposed based on the precautionary approach combined with a risk-based approach. Therefore, all urban wastewater treatment plants of 100 000 p.e. and above should provide quaternary treatment, as those facilities represent a</p> |                  |                  |

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|------------------|
| <p>significant share of micropollutant discharges in the environment and the removal of micropollutants by urban wastewater treatment plants at such scale is cost-effective. For agglomerations of between 10 000 p.e. and 100 000 p.e., Member States should be required to apply quaternary treatment to areas identified as sensitive to pollution with micropollutants based on clear criteria, which should be specified. Such areas should include locations where treated urban wastewater discharge to water bodies result in low dilution ratios, or where the receiving water bodies are used for the production of drinking water or as bathing waters. In order to avoid the requirement of quaternary treatment for agglomerations of between 10 000 p.e. and 100 000 p.e., Member States should be required to demonstrate the absence of risks to the environment or to public health on the basis of a standardised risk assessment. In order to give Member States enough time to plan and deliver the necessary infrastructures, the requirement of quaternary treatment should progressively apply until 2040 with clear interim objectives.</p> |                  |                  |
| <p>(16) The evaluation has also shown that the wastewater treatment sector offers the opportunity to significantly reduce its own energy consumption and to produce renewable energy, for example by better use of the available surfaces in urban wastewater treatment plants for solar energy production or by producing biogas from sludge. The evaluation also illustrated that, without clear legal obligations, only partial progress can be expected in this sector. In this context, Member States should be required to ensure that the total annual energy used by all urban wastewater treatment plants on their national territory treating a load of 10 000 p.e. and above does not exceed the production of energy from renewable sources as defined in Article 2(1) of Directive (EU) 2018/2001 of the European Parliament and of the Council<sup>3</sup>, by those urban wastewater treatment plants. <b><u>In order to take into</u></b></p>                                                                                                                                                                                                        |                  |                  |

<sup>3</sup> Directive (EU) 2018/2001 of the European Parliament and of the Council of 11 December 2018 on the promotion of the use of energy from renewable sources (OJ L 328, 21.12.2018, p. 82).

<sup>5</sup> Commission Recommendation (EU) 2021/1749 of 28 September 2021 on Energy Efficiency First: from principles to practice — Guidelines and examples for its implementation in decision-making in the energy sector and beyond.

<sup>6</sup> Communication from the Commission to the European Parliament, the European Council, the Council, the European Economic and Social Committee and the Committee of the Regions: REPowerEU Plan (COM/2022/230 final).

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Finland proposal | Finland comments |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|------------------|
| <p>Parliament and of the Council<sup>7</sup> and with Directive (EU) 2018/2001 in which urban wastewater treatment sites are qualified as 'go-to' areas for renewables, meaning a location designated as particularly suitable for the installation of plants for the production of energy from renewable sources. In order to reach the objective of energy neutrality via optimal measures for each urban wastewater treatment plant and for the collection system, Member States should ensure that energy audits are carried out in accordance with Article 8 of Directive 2012/27/EU of the European Parliament and of the Council<sup>8</sup> every four years. Those audits should include an identification of the potential for cost-effective use or production of renewable energy following the criteria set out in Annex VI to Directive 2012/27/EU.</p>                                                                                                                                                                                                                                                  |                  |                  |
| <p>(19) Urban wastewater treatment plants also receive non-domestic wastewater, including industrial wastewater, which can contain a range of pollutants not explicitly covered by Directive 91/271/EEC, such as heavy metals, microplastics, micropollutants and other chemicals. <b><u>This non-domestic wastewater may come from industries, or commercial establishments, or hospitals and other medical facilities, etc.</u></b> In most instances, there is a poor understanding and knowledge of such pollution which could deteriorate the functioning of the treatment process and contribute to the pollution of the receiving waters, but also prevent the recovery of sludge and the reuse of treated wastewater. Member States should therefore regularly monitor and report on such non-domestic pollution that enters the urban wastewater treatment plants and is discharged into water bodies. To prevent pollution from non-domestic wastewater discharges at source, releases from industries or enterprises connected to collecting systems should be subject to prior authorisation. In order</p> |                  |                  |

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|------------------|
| <p>to ensure that collecting systems and urban wastewater treatment plants are technically capable of receiving and treating the incoming pollution, the operators who manage urban wastewater treatment plants receiving non-domestic wastewater should be consulted before those permits are issued and should be able to consult the issued permits in order to be able to adapt their treatment processes. Where non-domestic pollution is identified in the incoming waters, Member States should take appropriate measures to reduce pollution at source, by enhancing the monitoring of pollutants in collecting systems so that the pollution sources can be identified and, where necessary, by reviewing the authorisations provided to relevant, connected urban wastewater treatment plants.</p>                                                                                                                                                                                                                                                                                                                                                         |  |                  |
| <p><del>(18)</del> <b>(19 bis)</b> The water resources of the Union are increasingly under pressure, resulting in permanent or temporary water scarcity in some areas of the Union. The Union's ability to respond to the increasing pressures on water resources could be improved through a wider reuse of treated urban wastewater, limiting freshwater abstraction from surface and groundwater bodies. Therefore, the reuse of treated urban wastewater should be encouraged and applied whenever appropriate, whilst taking into account the need to ensure that the objectives of good ecological and chemical status of the receiving bodies, as defined in Directive 2000/60/EC, are met. The reinforcement of the requirements for the treatment of urban wastewater, and the actions to better monitor, track and reduce pollution at source, will have impacts on the quality of treated urban wastewater, and will therefore support water reuse. Where water reuse serves the purpose of agricultural irrigation, it should be carried out in accordance with Regulation (EU) 2020/741 of the European Parliament and of the Council <sup>9</sup>.</p> |                                                                                     |                  |
| <p>(28) The evaluation concluded that sludge management could be improved to better align it with the principles of the</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                     |                  |

<sup>9</sup> Regulation (EU) 2020/741 of the European Parliament and of the Council of 25 May 2020 on minimum requirements for water reuse (OJ L 177, 5.6.2020, p. 32).

| <p>circular economy and of the waste hierarchy as defined in Article 4 of Directive 2008/98/EC. The actions to better monitor and reduce pollution at source from non-domestic discharges will help improving the quality of the sludge produced and ensure its safe use in agriculture. In order to ensure a proper and safe recovery of nutrients, including the critical substance phosphorus, from the sludge, minimum recovery rates should be defined at Union level.</p> <p><b><u>The recovered nutrients shall be used as substitutes for primary nutrients, for example, in the production of fertilizers.</u></b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |                  |
| <p>(29) <del>Additional</del> <b><u>Adequate</u></b> monitoring is necessary to verify compliance with the new requirements concerning micropollutants, non-domestic pollution, energy neutrality, GHG emissions, <del>storm-water</del> <b><u>sewer</u></b> overflows and <b><u>polluted</u></b> urban runoff <b><u>discharges</u></b>. <b><u>Microplastics and relevant micropollutants should be monitored, where relevant, in sewer overflow discharges with a representative sampling programme which would inform concentration adopted for water quality modelling. This monitoring should be updated on a regular basis to ensure the modelling continues to be representative of local conditions.</u></b> To verify the performance of the quaternary treatment concerning the reduction of micropollutants in urban wastewater discharges, it is sufficient to monitor a limited set of representative micropollutants. The monitoring frequencies should be aligned to the current best practices, as currently practiced in Switzerland. To remain cost-effective, those obligations should be adapted to the size of the urban wastewater treatment plants and of the agglomerations. The monitoring will also contribute to provide data for the overall Environmental Monitoring Framework as set up under the 8th Environmental Action Programme, and more specifically feed the Zero Pollution Monitoring Framework underpinning it.</p> |                                                                                     |                  |
| <p>(36) In order to ensure uniform conditions for the implementation of this Directive, implementing powers should be conferred on the Commission for the adoption of standards for the design of individual systems, for the</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                     |                  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                  |                  |
| 1. This Directive lays down rules on the collection, treatment, and discharge of urban wastewater, to protect the environment and human health while progressively <del>eliminating</del> <b>reducing</b> greenhouse gas emissions <u>to sustainable levels</u> and improving the energy balance of urban wastewater collection and treatment activities. It also lays down rules on access to sanitation, on transparency of the urban wastewater sector and on the regular surveillance of public health relevant parameters in urban wastewaters. |                  |                  |

## ARTICLE 2 - DEFINITIONS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                  |                  |
| For the purpose of this Directive, the following definitions apply:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                  |                  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                  |                  |
| (1) 'urban wastewater' means domestic wastewater <del>or, the mixture of domestic wastewater</del> <b>mixed with and either</b> non-domestic wastewater <del>and/or the mixture of domestic wastewater and</del> <b>with and</b> urban runoff, <b>or both of them</b> ;                                                                                                                                                                                                                                                                                                                        |                  |                  |
| (2) 'domestic wastewater' means wastewater from residential settlements, <del>and services</del> <b>and institutions</b> which originates predominantly from the human metabolism and/or from household activities;                                                                                                                                                                                                                                                                                                                                                                            |                  |                  |
| (3) ' non-domestic wastewater' means <del>any</del> wastewater, <b>other than domestic wastewater and urban runoff</b> , which is discharged <del>into collecting systems</del> from premises used for <del>either the following</del> :<br><del>(a) the exercise of a trade;</del><br><del>(b) activities carried out by an institution;</del><br><del>(c) or industrial or economical activities;</del><br><u><b>The wastewaters from the above activities, that are only domestic wastewater (from toilets or kitchens with food preparation) are entitled as domestic wastewaters.</b></u> |                  |                  |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Finland proposal | Finland comments |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|------------------|
| (4) 'agglomeration' means an area where the <b>population (expressed in population equivalent), combined or not with and/or economic activities</b> <del>pollution load of urban wastewater is sufficiently concentrated (taking as a reference 10 p.e. per hectare or above)</del> for urban wastewater to be collected and conducted to <b>one or more</b> <del>an</del> urban wastewater treatment plants or to a <b>one or more</b> final discharge points, <u>into receiving waters</u> ; |                  |                  |
| (5) 'urban runoff' means <b>precipitation</b> <del>rainwater</del> from agglomerations collected by combined or separate sewers;                                                                                                                                                                                                                                                                                                                                                               |                  |                  |
| (6) ' <del>sewer storm water</del> overflow' means discharge of untreated urban wastewater <del>into</del> receiving waters from <b>separate or</b> combined sewers <del>caused by rainfall</del> ;                                                                                                                                                                                                                                                                                            |                  |                  |
| (7) 'collecting system' means a system of conduits which collects and conducts urban wastewater;                                                                                                                                                                                                                                                                                                                                                                                               |                  |                  |
| (8) 'combined sewer' means a <b>single</b> conduit <del>that that designed to</del> collects and conducts urban wastewater <u>including urban runoff</u> ; <del>including urban runoff</del> ;                                                                                                                                                                                                                                                                                                 |                  |                  |
| (9) 'separate sewer' means a <b>system of</b> conduits that separately collects and conducts <b>either urban runoff or</b> <del>either of the following</del> :<br>(a) <del>domestic</del> <b>urban</b> wastewater <b>not including urban runoff</b> ;<br>(b) <del>non-domestic</del> wastewater <b>non-domestic wastewater</b> ;<br>(c) <del>a mixture of domestic and non-domestic wastewater</del> ;<br>(d) <del>rainwater from agglomerations</del> ;                                      |                  |                  |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                   | Finland proposal | Finland comments |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|------------------|
| (10) <del>'1 population equivalent' or '(1 p.e.)' means the unit expressing the average potential water pollution load caused by one person per day, where 1 p.e. is the organic biodegradable load <del>per day</del> having a five-day biochemical oxygen demand (BOD5) of 60 g of oxygen <del>per day per day</del>;</del>                                     |                  |                  |
| (10 bis) [NEW] 'primary treatment' means treatment of urban wastewater by a physical and/or chemical process involving settlement of suspended solids, or other processes in which the BOD5 of the incoming wastewater is reduced by at least 20% before discharge and the total suspended solids of the incoming wastewater are reduced by at least 50%.         |                  |                  |
| (11) 'secondary treatment' means treatment of urban wastewater by a process generally involving biological treatment with a secondary settlement or another process <del>which reduces removes most of biodegradable organic matter in from</del> urban wastewater;                                                                                               |                  |                  |
| (12) 'tertiary treatment' means treatment of urban wastewater by a process which <del>reduces removes most of</del> <u>by a process which removes</u> nitrogen and/or phosphorus from the urban wastewaters;                                                                                                                                                      |                  |                  |
| (13) 'quaternary treatment' means treatment of urban wastewater by a process which <del>removes</del> <u>reduces</u> a broad spectrum of micropollutants <del>in from the from</del> urban wastewaters;                                                                                                                                                           |                  |                  |
| (14) 'sludge' means <del>any solid, semisolid, or liquid waste</del> <u>organic residue and inorganic sludge-residue</u> resulting from the treatment of urban wastewater in an urban wastewater treatment plant (excluding <del>debris, grit, grease, other debris</del> and any other screenings residues from the <del>first</del> <u>pre-treatment</u> step); |                  |                  |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                                                                         | Finland proposal | Finland comments |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|------------------|
| (15) 'eutrophication' means the enrichment of water by nutrients, especially compounds of nitrogen and/or phosphorus, causing an accelerated growth of algae and higher forms of plant life to produce an undesirable disturbance to the balance of organisms present in the water and to the quality of the water concerned;                                                                                           |                  |                  |
| (16) 'micropollutant' means a substance, including its breakdown products, <del>that is usually present in the environment and urban wastewaters in low concentrations below milligrams per litre and</del> which can be considered hazardous to human health or the environment based on any of the <b>relevant</b> criteria set out in Part 3 and Part 4 of Annex I to Regulation EC <b>1272/2008</b> <sup>11</sup> ; |                  |                  |
| (17) 'dilution ratio' means the ratio <del>of between the last five years average volume of annual flow of the receiving waters at the point of discharge and to the last five years average of the annual discharge volume of urban wastewater into surface waters; discharged from a treatment plant;</del>                                                                                                           |                  |                  |
| (18) 'producer' means any manufacturer, importer or distributor that on a professional basis places products on the market of a Member State, including by means of distance contracts as defined in Article 2(7) of Directive 2011/83/EU means;                                                                                                                                                                        |                  |                  |
| (19) 'Producer Responsibility Organisation' means <del>an</del> <b>nationally recognised</b> organisation established collectively by producers for the purpose of fulfilling their obligations under Article 9 <b>and 10</b> ;                                                                                                                                                                                         |                  |                  |
| (20) 'sanitation' means facilities and services for the safe disposal of human urine, faeces, and menstrual blood;                                                                                                                                                                                                                                                                                                      |                  |                  |

<sup>11</sup> Regulation EC 1272/2008 of the European Parliament and of the Council on classification, labelling and packaging of substances and mixtures (OJ L 353 31.12.2008, p 1).

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                      | Finland proposal | Finland comments |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|------------------|
| (21) 'antimicrobial resistance' means the ability of micro-organisms to survive or to grow in the presence of a concentration of an antimicrobial agent which is usually sufficient to inhibit or kill micro-organisms of the same species;                                                                          |                  |                  |
| (22) 'public concerned' means the public affected or likely to be affected by, or having an interest in, the decision-making procedures for the implementation of the obligations laid down in this Directive, including non-governmental organisations promoting the protection of human health or the environment; |                  |                  |
| (23) 'plastic biomedica' means a plastic support used for the development of the bacteria needed for the treatment of urban wastewaters;                                                                                                                                                                             |                  |                  |
| (24) 'placing on the market' means the first making available of a product on the market of a Member State                                                                                                                                                                                                           |                  |                  |
| (25) <b>'load' means the amount of organic biodegradable matter measured as BOD5 in urban wastewater, expressed in p.e., or any pollutant or nutrient in urban wastewater, expressed in p.e. or mass unit per time (usually kilogram per day or year).</b>                                                           |                  |                  |

### ARTICLE 3 – COLLECTING SYSTEMS AND CALCULATION OF THE LOAD EXPRESSED IN P.E

| <p>1. Member States shall ensure that energy audits of urban wastewater treatment plants and collecting systems are carried out every four years. Those audits shall be carried out in accordance with Article 8 of Directive 2012/27/EU and include an identification of the potential for cost-effective <b>measures to reduce the use of energy and or enhance the</b> production of renewable energy, with a particular focus to identify and utilise the potential for biogas production, while reducing <b>greenhouse gas</b> methane emissions. The first audits shall be carried out:</p> <p>(a) by 31 December <del>2025</del> <b>2030</b> for urban wastewater treatment plants treating a load of 100 000 p.e. and above and the collecting systems connected to them;</p> <p>(b) by 31 December <del>2030</del> <b>2035</b> for urban wastewater treatment plants treating a load of between 10 000 p.e. and 100 000 p.e. and the collecting systems connected to them.</p> |                  |                  |

| <p>3. The <del>general binding rules regulations and</del> specific authorisations referred to in paragraph 1 <del>of this Article</del> shall fulfil the requirements set out in Part C of Annex I. The Commission is empowered to adopt delegated acts in accordance with the procedure referred to in Article 27 to amend Part C of Annex I in order to adapt it to technical and scientific progress in the field of environmental protection.</p>                                                                                                                                                                                                                                                                                                                                                                          | <p>3. The <del>general binding rules regulations and</del> specific authorisations referred to in paragraph 1 <del>of this Article</del> shall fulfil the requirements set out in Part C of Annex I. The Commission is empowered to adopt <del>delegated implementing</del> acts in accordance with the procedure referred to in Article 28<del>7</del> to amend Part C of Annex I in order to adapt it to technical and scientific progress in the field of environmental protection.</p> | <p>As a compromise the delegated act should be changed to implemented act because the procedure would then stay as comitology procedure as it is in the current directive (91/271/ETY). The EC has justified that the same delegated power is also in the directive 91/271/ETY but according to FI understanding this 18 § in the directive 91/271/ETY refers actually to comitology procedure, where the MSs have a representative. It is very important that the procedure will remain as it is.</p> |
| <p>4. The specific authorisations referred to in paragraph 1 shall be reviewed and, where necessary, adapted at least every <del>6</del> <b>ten</b> years.</p> <p><b>The <del>general binding rules regulations</del> referred to in paragraph 1 shall be reviewed at regular intervals and, where necessary, adapted.</b></p> <p><b>If the characteristics of the non-domestic wastewater, the urban wastewater treatment plant or the receiving water body change significantly, the provisions of the specific authorisations shall be reviewed and adapted to these changes <del>updated in the cases where the characteristics of the non-domestic wastewater, of the urban wastewater treatment plant or of the receiving water body change significantly to ensure that those conditions remain fulfilled.</del></b></p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

## ARTICLE 16 – BIODEGRADABLE NON-DOMESTIC WASTEWATER

|                                                                                    |                  |                  |

~~1. Member States shall monitor the presence of the following public health parameters in urban wastewater:~~

~~(a) SARS-CoV-2 virus and its variants;~~

~~(b) poliovirus;~~

~~(c) influenza virus;~~

~~(d) emerging pathogens;~~

~~(e) contaminants of emerging concern;~~

~~(f) any other public health parameters that are considered relevant by the competent authorities of the Member States for monitoring.~~

21. For the purpose of paragraph 1, Member States shall set up a national system for ~~permanent~~ cooperation and coordination between competent authorities responsible for public health and competent authorities responsible for urban wastewater treatment with regard to:

(a) the identification of ~~other~~ **relevant** public health parameters ~~than the ones referred to in paragraph 1~~ that are to be monitored **at least in the inlet of** urban wastewater **treatment plants**, such as those in the following list:

**(i) SARS-CoV-2 virus and its variants of interest;**

**(ii) poliovirus;**

**(iii) influenza virus;**

**(iv) emerging pathogens;**

**(v) contaminants of emerging concern;**

**(vi) (v) any other public health parameters that are considered relevant by the competent authorities of the Member States for monitoring;**

(b) the determination of the location and the frequency of urban wastewater sampling and analysis for each public health parameter identified in accordance with paragraph 1(a), ~~taking into account~~ **thus regarding** the available health data and the needs in terms of public health data and, where relevant, the local epidemiological situations;

(c) the organisation of an appropriate and timely communication of the monitoring results to the competent authorities responsible for public health and to Union

| <p>2. For all agglomerations of 10 000 p.e. and above, Member States shall ensure that competent authorities, <b>appropriate bodies or operators of the collecting system</b> <del>monitor</del> <b>carry out sufficient representative monitoring of sewer</b> <del>the concentration and loads of pollutants from storm water overflows and</del> <b>polluted discharges of</b> urban runoff <del>discharged</del> into water bodies <b>in order to be able to model the concentration and loads of the parameters listed in Table 1 and 2 of Annex I as well as the content of microplastics and relevant micropollutants in these discharges.</b></p> |  |                  |

3. For all agglomerations of ~~above~~ 10 000 p.e. **and above**, Member States shall **ensure that competent authorities, appropriate bodies or the operator of the wastewater treatment plant** monitor, at the inlets and outlets of urban wastewater treatment plants, the concentration and loads in the urban wastewater of the following elements:

(a) pollutants **that are expected to be found in urban wastewaters** listed in:

(i) Annexes VIII and X to Directive 2000/60/EC, the Annex to Directive 2008/105/EC, Annex I to Directive 2006/118/EC and Part B of Annex II to Directive 2006/118/EC;

(ii) the Annex to Decision 2455/2001/EC of the European Parliament and of the Council<sup>19</sup>;

(iii) Annex II to Regulation (EC) No 166/2006 of the European Parliament and of the Council<sup>20</sup>;

(iv) Annexes I and II to Directive 86/278/EEC.

(b) parameters listed in Part B of Annex III to Directive (EU) 2020/2184, where urban wastewater is discharged in a catchment area referred to in Article 8 of that Directive;

(c) the presence of microplastics.

**[NEW] Pollutants listed under points (a) and (b) may be excluded from the monitoring under this paragraph as long as it can be demonstrated, inter alia on the basis of monitoring results, that they are absent in urban wastewaters.**

For all agglomerations of above 10 000 p.e., Member States shall **ensure that competent authorities, appropriate bodies or the operator of the wastewater treatment plant** monitor the presence of micro-plastics in the sludge **when relevant and, notably, when it is reused in agriculture**.

**4.** The monitoring referred to in ~~the first and second sub~~ **this** paragraphs **3** shall be carried out with the following frequencies:

(a) at least two samples per year, with maximum ~~6-7~~ months between the samples, for agglomerations of ~~100 000~~ **150.000** p.e. and ~~more above~~;

| 3. Member States shall update their national implementation programmes at least every <del>5</del> 6 years. They shall submit them to the Commission by 31 December, except where they can demonstrate that they are in compliance with Articles 3 to 8.                                                                                                                                                                   |                  |                  |
|                                                                                                                                                                                                                                                                                                                                                                                                                            |                  |                  |
| 4. The Commission is empowered to adopt implementing acts establishing the methods and formats for submission of the national implementation programmes. Those implementing acts shall be adopted in accordance with the examination procedure referred to in Article 28(2) <b><u>no later than [OP please insert the date = the last day of the sixth month from the date of entry into force of this Directive].</u></b> |                  |                  |
|                                                                                                                                                                                                                                                                                                                                                                                                                            |                  |                  |

**5. Member States may include in their first national implementation programmes an extension of maximum six years of the following deadlines:**

**(a) the deadlines referred to in Article 3(2) and/or in Article 6(2) on the conditions that:**

**(i) less than 50 % of these agglomerations are provided with collecting systems and are not subject to secondary treatment on [OP please insert the date=day of entry into force of the Directive]; and**

**(ii) the national implementation programme includes:**

**- the number of agglomerations between 1 000 and 2 000 p.e. that lacks a collecting system and secondary treatment on [OP please insert the date=day of entry into force of the Directive]; and**

**- a plan detailing the necessary investments to reach full compliance for these agglomerations within the extended deadlines;**

**(b) the deadline for agglomerations referred to in Article 7(3) on the conditions that:**

**(i) at least 50 % of these agglomerations are not applying tertiary treatment on [OP please insert the date=day of entry into force of the Directive]; and**

**(ii) the national implementation programme includes:**

**- the number of agglomerations referred to in Article 7(3) lacking tertiary treatment on [OP please insert the date=day of entry into force of the Directive]; and**

**- a plan detailing the necessary investments to reach full compliance for these agglomerations within the extended deadlines;**

**The extensions of these deadlines shall be effective only if the above-mentioned conditions are fulfilled. The Commission shall notify the Member States if**

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                  |                  |
| 1. Member States shall ensure that, where damage to human health has occurred as a result of a violation of national measures that were adopted pursuant to this Directive, the individuals affected have the right to claim and obtain compensation for that damage from the relevant natural or legal persons and, where appropriate, from the relevant competent authorities responsible for the violation.                                                                                                                        |                  |                  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                  |                  |
| <del>2. Member States shall ensure that, as part of the public concerned, non-governmental organisations promoting the protection of human health or the environment and meeting any requirements under national law are allowed to represent the individuals affected and bring collective actions for compensation. Member States shall ensure that a claim for a violation leading to a damage cannot be pursued twice, by the individuals affected and by the non-governmental organisations referred to in this paragraph.</del> |                  |                  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                  |                  |
| 3 2. Member States shall ensure that national rules and procedures relating to claims for compensation are designed and applied in such a way that they do not render impossible or excessively difficult the exercise of the right to compensation for damage caused by a violation pursuant to paragraph 1.                                                                                                                                                                                                                         |                  |                  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                  |                  |

| 1. The power to adopt delegated acts is conferred on the Commission subject to the conditions laid down in this Article.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                  |                  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                  |                  |
| 2. The power to adopt delegated acts referred to in Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), and 24(3) shall be conferred on the Commission for a period of five years from [OP please insert the date = the date of entry into force of this Directive]. The Commission shall draw up a report in respect of the delegation of power not later than nine months before the end of the five-year period. The delegation of power shall be tacitly extended for periods of an identical duration unless the European Parliament or the Council opposes such extension not later than three months before the end of each period. |                  |                  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                  |                  |
| 3. The delegation of power referred to in Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), and 24(3) may be revoked at any time by the European Parliament or by the Council. A decision to revoke shall put an end to the delegation of the power specified in that decision. It shall take effect the day following the publication of the decision in the Official Journal of the European Union or at a later date specified therein. It shall not affect the validity of any delegated acts already in force.                                                                                                                      |                  |                  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                  |                  |
| 4. Before adopting a delegated act, the Commission shall consult experts designated by each Member State in accordance with the principles laid down in the Interinstitutional Agreement of 13 April 2016 on Better Law-Making.                                                                                                                                                                                                                                                                                                                                                                                                                   |                  |                  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                  |                  |

| 5. As soon as it adopts a delegated act, the Commission shall notify it simultaneously to the European Parliament and to the Council.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                  |                  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                  |                  |
| 6. A delegated act adopted pursuant to Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), or 24(3) shall enter into force only if no objection has been expressed either by the European Parliament or by the Council within a period of two months of notification of that act to the European Parliament and the Council or if, before the expiry of that period, the European Parliament and the Council have both informed the Commission that they will not object. That period shall be extended by two months at the initiative of the European Parliament or of the Council. |                  |                  |

| 3. The measures to be taken to achieve the objectives referred to in point 2 accompanied with a clear identification of the actors involved and their responsibilities in the <del>implantation</del> <b>implementation</b> of the integrated plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                  |                  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                  |                  |
| <p>4. When assessing which measures to be taken under point 3, Member States shall ensure that their competent authorities consider at least the following:</p> <p>(a) firstly, preventive measures aiming at avoiding the entry of unpolluted rain waters into collecting systems, including measures promoting natural water retention or rainwater harvesting, and measures increasing green spaces or limiting impermeable surfaces in the agglomerations;</p> <p>(b) secondly, measures to better manage and optimize the use of existing infrastructure including collecting systems, storage volumes, urban wastewater treatment plants with the aim to ensure that polluted rain waters are collected and treated, and releases of untreated urban wastewater into receiving waters are minimised;</p> <p>(c) finally, where necessary to achieve the objectives referred to in point 2, additional mitigation measures including the adaptation of the infrastructure for the collection, storage and treatment of urban wastewater or the creation of new infrastructures with a priority to green infrastructure such as vegetated ditches, treatment wetlands and storage ponds designed in order to support biodiversity. Where relevant, water reuse shall be considered in the context of the development of the integrated urban wastewater management plans referred to in Article 5.</p> |                  |                  |

| <i>Recitals amended:</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |             |             |
| <p>(2) Directive 91/271/EEC sets the legal framework for the collection, treatment and discharge of urban wastewater and the discharge of biodegradable wastewaters from certain industrial sectors. <b><u>Urban wastewaters can be formed by different mixtures of domestic wastewaters, urban runoff and non-domestic wastewater from other origins. Wastewater from institutions such as offices, schools, kitchens with food preparation, etc. which are predominantly originated from the human metabolism, qualifies as domestic wastewaters as well.</u></b> Its objective is to protect the environment from being adversely affected by insufficiently treated urban wastewater discharges. This Directive should continue to pursue the same objective, whilst also contributing to the protection of public health, when for instance urban wastewater is discharged in bathing waters or in water bodies used for the abstraction of drinking water, or when urban wastewater is used as an indicator for parameters relevant for public health. It should also improve access to sanitation and to key information related to the governance of the urban wastewater collection and treatment activities. Finally, this Directive should contribute to the progressive <b>elimination</b> reduction of greenhouse gas (GHG) emissions from urban wastewater collection and treatment activities, notably by further reducing nitrogen emissions but also by promoting energy efficiency and production of renewable energies, and thus should contribute to the 2050 objective of Climate Neutrality established under Regulation (EU) 2021/1119 of the European Parliament and of the Council<sup>3</sup>.</p> |             |             |
| <p>(4) Small agglomerations constitute a significant pressure on 11 % of the surface water bodies in the Union. To better tackle the pollution from such agglomerations, and to prevent discharges of untreated urban wastewater into the environment, the scope of this Directive should include all agglomerations of 1 000 population equivalent (p.e.) and above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |             |             |

| <p>(5). In order to ensure effective treatment of urban wastewater before discharge into the environment, all urban wastewaters from agglomerations of 1 000 p.e. and above should be collected in centralised collecting systems, <u>unless they justify a derogation for the use of individual systems under paragraph 1 of Article 4.</u> When delineating their agglomerations, Member States should take into account the <u>indicative</u> reference threshold of <u>10-25 p.e. per hectare above which the population, possibly combined with economic activities, located in a specific area are considered sufficiently concentrated.</u> Where collecting systems are already in place, Member States should ensure that all sources of urban wastewater are connected to them.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                    |
| <p>(6) <del>Exceptionally, where</del> <u>Where</u> it can be demonstrated that the establishment of a centralised urban wastewater collecting system would produce no environmental benefit, <b>would not be technically feasible</b>, or <b>would</b> involve excessive costs, Member States should be allowed to use individual systems to treat urban wastewater, as long as they ensure the same level of <b>protection of the environment</b> <del>treatment as secondary and tertiary treatment</del>. For this purpose, Member States should establish national registers to identify individual systems used on their territory and take all necessary measures to ensure that the design of such systems is adequate, that the systems are properly maintained and that they are subject to a regular compliance control. In particular, Member States should ensure that individual systems used for the collection and storage of urban wastewater are impervious and leak-proof, and that monitoring and inspection of the systems are carried out at regular and fixed intervals. <b>Where individual systems are used to collect and treat more than 2% of the urban wastewater load at national level from agglomerations of 2 000 p.e. and above, Member States should provide the Commission with justifications for the reasons for the use of individual systems instead of collecting systems, the level of compliance of those systems with established standards under this Directive and measures taken to reduce the use of such systems. The Commission should be empowered to adopt implementing acts to establish the format of the reporting and the level of details of the information to be provided by national authorities.</b></p> | <p>(6) Where it can be demonstrated that the establishment of <b>or the connection to an centralised</b> urban wastewater collecting system would produce no environmental benefit, would not be technically feasible, or would involve excessive costs, Member States should be allowed to use individual systems to treat urban wastewater, as long as they ensure the same level of protection of the environment. For this purpose, Member States should establish <b>national</b> registers to identify individual systems used on their territory and take all necessary measures to ensure that the design of such systems is adequate, that the systems are properly maintained and that they are subject to a regular compliance control. The Commission should be empowered to adopt implementing acts to establish the format of the reporting and the level of details of the information to be provided by national authorities.</p> | <p>SE suggests including “or the connection to” to harmonise the language with article 4.1. We also suggest deleting the word “national” since article 4.3 allows all administrative levels for the registers.</p> |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                     |                                          |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|------------------------------------------|
| <p>(29) <del>Additional Adequate</del> monitoring is necessary to verify compliance with the new requirements concerning micropollutants, non-domestic pollution, energy neutrality, GHG emissions, <del>storm water</del> sewer overflows and <del>polluted</del> urban runoff <del>discharges</del>. <b><u>Microplastics and relevant micropollutants should be monitored, where relevant, in sewer overflow discharges with a representative sampling programme which would inform concentration adopted for water quality modelling. This monitoring should be updated on a regular basis to ensure the modelling continues to be representative of local conditions.</u></b> To verify the performance of the quaternary treatment concerning the reduction of micropollutants in urban wastewater discharges, it is sufficient to monitor a limited set of representative micro-pollutants. The monitoring frequencies should be aligned to the current best practices, as currently practiced in Switzerland. To remain cost-effective, those obligations should be adapted to the size of the urban wastewater treatment plants and of the agglomerations. The monitoring will also contribute to provide data for the overall Environmental Monitoring Framework as set up under the 8th Environmental Action Programme, and more specifically feed the Zero Pollution Monitoring Framework underpinning it.</p> |  | <p>SE support the suggested changes.</p> |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |             |             |
| 1. This Directive lays down rules on the collection, treatment, and discharge of urban wastewater, to protect the environment and human health while progressively <del>eliminating</del> <b>reducing</b> greenhouse gas emissions <del>to</del> <b>sustainable levels</b> and improving the energy balance of urban wastewater collection and treatment activities. It also lays down rules on access to sanitation, on transparency of the urban wastewater sector and on the regular surveillance of public health relevant parameters in urban wastewaters. |             |             |

## ARTICLE 2 - DEFINITIONS

| <p>(9) 'separate sewer' means a <b>system of</b> conduits that separately collects and conducts <b>either urban runoff or</b> <del>either of the following:</del></p> <p>(a) <del>domestic</del> <b>urban wastewater not including urban runoff;</b></p> <p>(b) <del>non-domestic wastewater;</del></p> <p>(c) <del>a mixture of domestic and non-domestic wastewater;</del></p> <p>(d) <del>rainwater from agglomerations;</del></p> | <p>'separate sewer' means a <del>system of</del> conduit that separately collects and conducts either urban runoff or urban wastewater not including urban runoff;</p>                                                                                                     | <p>SE do not support including "system of" since the definition is for a sewer and not a "collecting system".</p> <p>SE support to keep this definition as simple as possible.</p>                                                                                                                                                                                                                                                                                                                        |
| <p>(10) '1 population equivalent' or '(1 p.e.)' means <del>the unit expressing the average potential water pollution load caused by one person per day, where 1 p.e. is the organic biodegradable load</del> <b>per day</b> having a five-day biochemical oxygen demand (BOD5) of 60 g of oxygen <del>per day</del> <b>per day</b>;</p>                                                                                               | <p>'1 population equivalent' or '(1 p.e.)' means the <b>daily</b> organic biodegradable load <del>per day</del> having a five-day biochemical oxygen demand (BOD5) of 60 g of oxygen <b>or a seven-day biochemical oxygen demand (BOD7) of 70 g of oxygen-per day</b>.</p> | <p>SE would like to keep "per day" directly after "organic load" since it refers to the daily organic load and not the daily oxygen consumption during analysis.</p> <p>An alternative way of reaching the same outcome could be to include the word "daily" before "organic biodegradable load". SE further suggest to also include the corresponding definition using BOD7, since that is the standard method of analysis in SE.</p> <p>Another option is to change "daily" to "24-hour-sample of".</p> |
| <p>(10 bis) [NEW] 'primary treatment' means treatment of urban wastewater by a physical and/or chemical process involving settlement of suspended solids, or other processes in which the BOD5 of the incoming wastewater is reduced by at least 20% before discharge and the total suspended solids of the incoming wastewater are reduced by at least 50%.</p>                                                                      | <p>Delete</p>                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                        | SE proposal | SE comments |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-------------|
| (11) 'secondary treatment' means treatment of urban wastewater by a process generally involving biological treatment with a secondary settlement or <del>another</del> process <b>which <u>reduces</u> <del>removes most of</del> biodegradable organic matter <u>in from</u> urban wastewater;</b>                                                                    |             |             |
| (12) 'tertiary treatment' means treatment of urban wastewater by a process which <b><u>reduces</u> <del>removes most of</del> nitrogen and/or phosphorus from the urban wastewaters;</b>                                                                                                                                                                               |             |             |
| (13) 'quaternary treatment' means treatment of urban wastewater by a process which <del>removes</del> <b><u>reduces</u></b> a broad spectrum of micropollutants <del>in from</del> <b><u>in from</u></b> the urban wastewaters;                                                                                                                                        |             |             |
| (14) 'sludge' means <del>any solid, semisolid, or liquid waste</del> <b>organic and inorganic <u>sludge residue</u></b> resulting from the treatment of urban wastewater <b>in an urban wastewater treatment plant (excluding <u>debris</u>, grit, grease, <u>other debris</u> and <u>any other screenings</u> residues from the <u>first pre-treatment</u> step);</b> |             |             |
| (25) 'load' means the amount of <b><u>organic biodegradable matter measured as BOD5</u></b> in urban wastewater, expressed in p.e., or any pollutant or nutrient <del>in urban wastewater, expressed in p.e. or mass unit per time (usually kilogram per day or year).</del>                                                                                           |             |             |

## ARTICLE 3 – COLLECTING SYSTEMS AND CALCULATION OF THE LOAD EXPRESSED IN P.E

| 1. By 31 December <del>2030</del> <b>2035</b> , Member States shall ensure that an integrated urban wastewater management plan is established for <b><u>each drainage area of</u></b> agglomerations of 100 000 p.e. and above. |             |                                                                                                                                              |
|                                                                                                                                                                                                                                 |             |                                                                                                                                              |

2. By 31 December ~~2027~~**2030** Member States shall establish a list of agglomerations of between 10 000 p.e. and 100 000 p.e. where, considering historic data, **modelling** and state-of-the-art climate projections, one or more of the following conditions apply:

(a) ~~sewer storm-water overflow~~ or **polluted discharges** of urban runoff ~~discharges~~ poses a risk to the environment or human health;

(b) ~~sewer storm-water overflow~~ represents more than ~~4%~~**3%** of the annual collected urban wastewater load **of the parameters referred to in Tables 1 and, where relevant, Table 2 of Annex I**, calculated in dry weather **flow conditions**;

(c) ~~sewer storm-water overflow~~ or **polluted discharges of** urban runoff ~~discharges~~ prevents the fulfilment of any of the following:

(i) the requirements established under Article 5 of Directive (EU) 2020/2184;

(ii) the requirements set out in Article 5(3) of Directive 2006/7/EC of the European Parliament and of the Council<sup>1</sup>;

(iii) the requirements set out in Article 3 of Directive 2008/105/EC of the European Parliament and of the Council<sup>2</sup>;

(iv) the environmental objectives set out in Article 4 of Directive 2000/60/EC.

| <p>1. Member States shall ensure that energy audits of urban wastewater treatment plants and collecting systems are carried out every four years. Those audits shall be carried out in accordance with Article 8 of Directive 2012/27/EU and include an identification of the potential for cost-effective <b>measures to reduce the use of energy and or enhance the</b> production of renewable energy, with a particular focus to identify and utilise the potential for biogas production, while reducing <b>greenhouse gas methane</b> emissions. The first audits shall be carried out:</p> <p>(a) by 31 December <del>2025</del> <b>2030</b> for urban wastewater treatment plants treating a load of 100 000 p.e. and above and the collecting systems connected to them;</p> <p>(b) by 31 December <del>2030</del> <b>2035</b> for urban wastewater treatment plants treating a load of between 10 000 p.e. and 100 000 p.e. and the collecting systems connected to them.</p> |             |             |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |             |             |

| <p>2. Member States shall ensure that, <u>at national level, urban wastewater treatment plants treating a load of 10 000 p.e. and above produce energy from renewable sources</u> the total annual energy from renewable sources, as defined in Article 2(1) of Directive (EU) 2018/2001, <del>produced at national level, on or off-site, by urban wastewater treatment plants treating a load of 10 000 p.e. and above, is equivalent to at least: based on the results of the audits referred to in paragraph 1.</del></p> <p><u>This energy will be produced from urban wastewater resources, on or off-site. A maximum of 25% of energy may be produced or purchased from external renewable sources.</u></p> <p><u>Member States shall ensure that total annual energy from renewable sources produced by urban wastewater treatments plants or purchased under paragraphs 1 and 2 is equivalent to at least:</u></p> <p>(a) <del>50</del> <b>20</b> % of the total annual energy used by such plants by 31 December 2030;</p> <p>(b) <del>75</del> <b>60</b> % of the total annual energy used by such plants by 31 December 2035;</p> <p>(c) 100% of the total annual energy used by such plants by 31 December 2040.</p> <p><u>In the calculation of the total annual energy produced from renewable sources as referred to in the first subparagraph, Member States may take into account a maximum of 10 % of renewable energy neither produced by urban wastewater treatment operators nor produced within a 5 kilometer radius from an urban wastewater treatment plants.</u></p> <p><u>Member States shall ensure that the potential for energy produced from urban wastewater resources, as demonstrated by the energy audit as referred in paragraph 1, is used to its full extent, representing at least 80% of the energy used by urban wastewater treatment plants referred to in points (a), (b) and (c) of the first subparagraph.</u></p> | <p>2. Member States shall ensure <b>that the total energy used within the Member State for the treatment of urban wastewater in urban wastewater treatment plants treating a load of 10 000 p.e. and above derived that the total annual energy</b> from renewable sources, as defined in Article 2(1) <b>and Article 2(2)</b> of Directive (EU) 2018/2001, <del>produced at national level, on or off-site, by urban wastewater treatment plants treating a load of 10 000 p.e. and above,</del> is equivalent to at least:</p> <p>(a) <del>50</del> <b>20-40</b> % of the total annual energy used by such plants by 31 December 2030;</p> <p>(b) <del>75</del> <b>60</b> % of the total annual energy used by such plants by 31 December 2035;</p> <p>(c) 100% of the total annual energy used by such plants by 31 December 2040.</p> <p>Member States shall ensure that the potential for <b>cost-effective measures to reduce the use of energy and the potential to produce energy produced</b> from urban wastewater resources, as demonstrated by the energy audit as referred to in paragraph 1, is used to its full extent <b>representing at least 80% of the energy used by urban wastewater treatment plants referred to in points (a), (b) and (c) of the first subparagraph.</b></p> | <p>SE welcomes the suggested changes, that are moving in the right direction, but cannot support requirements of self-sufficiency of treatment plants to produce non fossil energy. Most important is that the energy used derives from non-fossil sources - not by whom or where the energy is produced. Se suggestion. If our suggestion is acceptable, perhaps further discussions on whether to include even smaller treatment plants than 10 000 p.e. can be held.</p> <p>SE notes that the first deadline in Article 11(2) needs to be adjusted in relation to the deadlines in 11(1) as the audits under 11(1) needs to precede the measures in 11(2).</p> <p>SE suggest adding a reference to Article 2(2) of Directive (EU) 2018/2001 to include the recovery of thermal energy using heat pumps.</p> <p>SE support to delete the deleted subparagraphs.</p> <p>SE suggest that the COM is granted implementing powers on what to include and how to make these calculations. Such a delegation would need to be added to Article 11.</p> |

## ARTICLE 14 – DISCHARGES OF NON-DOMESTIC WASTEWATER

|                                                                                    |             |             |

~~1. Member States shall monitor the presence of the following public health parameters in urban wastewater:~~

~~(a) SARS-CoV-2 virus and its variants;~~

~~(b) poliovirus;~~

~~(c) influenza virus;~~

~~(d) emerging pathogens;~~

~~(e) contaminants of emerging concern;~~

~~(f) any other public health parameters that are considered relevant by the competent authorities of the Member States for monitoring.~~

21. For the purpose of paragraph 1, Member States shall set up a national system for permanent cooperation and coordination between competent authorities responsible for public health and competent authorities responsible for urban wastewater treatment with regard to:

(a) the identification of ~~other~~ **relevant** public health parameters ~~than the ones referred to in paragraph 1 that are to be monitored~~ **at least in the inlet of** urban wastewater **treatment plants**, such as those in the following list:

**(i) SARS-CoV-2 virus and its variants of interest;**

**(ii) poliovirus;**

**(iii) influenza virus;**

**(iv) emerging pathogens;**

~~**(v) contaminants of emerging concern;**~~

**(vi) any other public health parameters that are considered relevant by the competent authorities of the Member States for monitoring;**

(b) the determination of the location and the frequency of urban wastewater sampling and analysis for each public health parameter identified in accordance with paragraph 1(a), ~~taking into account~~ **thus regarding** the available health data and the needs in terms of public health data and, where relevant, the local epidemiological situations;

(c) the organisation of an appropriate and timely communication of the monitoring results to the competent authorities responsible for public health and to Union

PUBLIC

| (29)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |             | SE support the added clarifications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <p>1. Member States shall ensure that competent authorities, <b>appropriate bodies or the operator of the wastewater treatment plant</b> monitor:</p> <p>(a) discharges from urban wastewater treatment plants <del>in order to verify compliance with the requirements of part B of Annex I in accordance with the methods for monitoring and evaluation of results laid down in Part D of Annex I</del> <b>and; this monitoring shall include including loads and concentrations of the parameters listed in Part B Tables 1, and 2 and 3 of Annex I;</b></p> <p>(b) amounts, composition and destination of sludge, <b><u>taking into account requirements of Directive 86/278/EEC for sludge intended to be used in agriculture;</u></b></p> <p>(c) <del>the destination of the treated urban wastewater including the share of reused water</del> <b>quantities per year and per month of urban wastewater reused in agriculture that is subject to a derogation referred to in Article 15(1); the nutrient content of the fraction reused for agricultural irrigation and the period during which that fraction is reused compared to the monthly water and nutrient demand of the crops targeted by this reused urban wastewater;</b></p> <p>(d) <b>the greenhouse gases CO<sub>2</sub>, N<sub>2</sub>O, CH<sub>4</sub> emitted from urban wastewater treatment plants of <u>above 10 000 p.e. and above by means of analysis, calculations or modelling where appropriate;</u></b></p> <p>(e) <del>the greenhouse gases methane produced and the energy used and produced by urban wastewater treatment plants of above 10 000 p.e</del> <b>and above.</b></p> |             | <p>SE supports most of the suggested changes in paragraph 21(1).</p> <p>However, we oppose the addition of table 3 in the last sentence of paragraph 21.1(a). The substances in table 3 are chosen to verify compliance to the treatment requirements in article 8 and may not necessarily be suitable or even interesting for the purpose of assessing environmental impact and monitoring loads and concentrations. The reference in Art 9.1.a may rather be to the first part of Art. 21.1 (a) "to verify compliance".</p> <p>SE believes that it should also be possible in the long term to replace the relatively expensive and slow lab analyses required by the proposed wording of art. 21.1 with proxy parameters and calculations that can provide equivalent information on the treatment performance. Emission data needed to determine the environmental impact of these types of substances could instead be obtained through the monitoring provided for according to Article 21(3).</p> <p>SE suggest that the energy monitoring in paragraph 21.1 (e) should have sufficiently flexible system boundaries for treatment plants to benefit from energy and greenhouse gas savings through the possible future production of e.g. bioplastics and electro-fuels that can replace equivalent products of fossil origin. Use of fossil chemical energy, such as methanol, should correspondingly be regarded as a negative item in the calculation. In order to avoid sub-optimisations by adopting inappropriate system boundaries, further guidance on how to carry out the energy monitoring and accounting is essential. SE suggest that COM is authorised to produce implementing acts on this.</p> |

| <p>2. For all agglomerations of 10 000 p.e. and above, Member States shall ensure that competent authorities, <b>appropriate bodies or operators of the collecting system</b> <del>monitor</del> <b>carry out sufficient representative monitoring of sewer</b> <del>the concentration and loads of pollutants from storm water overflows and</del> <b><u>polluted discharges of</u></b> urban runoff discharged into water bodies in order to be able to model the concentration and loads of the parameters listed in Table 1 and 2 of Annex I as well as the content of microplastics and relevant micropollutants in these discharges.</p> |  | <p>SE support to add “discharges of” (urban runoff) but oppose to add “pollution” in paragraph 2, since it is not beneficial for the representativity of the monitoring.</p> |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>3. For all agglomerations of <del>above</del> 10 000 p.e. <b>and above</b>, Member States shall <b>ensure that competent authorities, appropriate bodies or the operator of the wastewater treatment plant</b> monitor, at the inlets and outlets of urban wastewater treatment plants, the concentration and loads in the urban wastewater of the following elements:</p> <p>(a) pollutants <b><u>that are expected to be found in urban wastewaters</u></b> listed in:</p> <p>(i) Annexes VIII and X to Directive 2000/60/EC, the Annex to Directive 2008/105/EC, Annex I to Directive 2006/118/EC and Part B of Annex II to Directive 2006/118/EC;</p> <p>(ii) the Annex to Decision 2455/2001/EC of the European Parliament and of the Council<sup>8</sup>;</p> <p>(iii) Annex II to Regulation (EC) No 166/2006 of the European Parliament and of the Council<sup>9</sup>;</p> <p>(iv) Annexes I and II to Directive 86/278/EEC.</p> <p>(b) parameters listed in Part B of Annex III to Directive (EU) 2020/2184, where urban wastewater is discharged in a catchment area referred to in Article 8 of that Directive;</p> <p>(c) the presence of microplastics.</p> <p><b><u>[NEW] Pollutants listed under points (a) and (b) may be excluded from the monitoring under this paragraph as long as it can be demonstrated, inter alia on the basis of monitoring results, that they are absent in urban wastewaters.</u></b></p> <p>For all agglomerations of above 10 000 p.e., Member States shall <b>ensure that competent authorities, appropriate bodies or the operator of the wastewater treatment plant</b> monitor the presence of micro-plastics in the sludge <b><u>when relevant and, notably, when it is reused in agriculture</u></b>.</p> <p>4. The monitoring referred to in <del>the first and second sub</del> <b>this</b> paragraphs <b>3</b> shall be carried out with the following frequencies:</p> <p>(a) at least two samples per year, with maximum <b>7</b> 6 months between the samples, for agglomerations of <b><u>100 000 150 000</u></b> p.e. and <del>more</del> <b>above</b>;</p> | <p>3. For all agglomerations of above 10 000 p.e., Member States shall ensure that competent authorities, appropriate bodies or the operator of the wastewater treatment plant monitor, at the inlets and outlets of urban wastewater treatment plants, the concentration and loads in the urban wastewater of the following elements:</p> <p>[...]</p> <p><del>(c) the presence of microplastics....</del></p> <p>[...]</p> <p>For all agglomerations of above 10 000 p.e., Member States shall <b>ensure that competent authorities, appropriate bodies or the operator of the wastewater treatment plant</b> monitor the presence of micro-plastics in urban wastewater and <del>the</del> sludge when relevant and, notably, when it is reused in agriculture.</p> <p>[...]</p> <p>4. The monitoring referred to in paragraph <b>3</b> shall be carried out with the following frequencies:</p> <p>(a) at least two samples per year, with maximum 7 months between the samples, for <b>agglomerations treatment plants of 100 000 150 000</b> p.e. and above;</p> <p>(b) at least one sample every <del>2</del> <b>two</b> years for <b>agglomerations treatment plants</b> of between 10 000 p.e. and 100 000 p.e.</p> <p>[...]</p> | <p>SE support the changes. We generally believe that monitoring requirements should only be introduced if they are necessary and useful for the information needed to solve the problem at hand. SE note that methods to analyse microplastics in sludge and urban wastewater still are under development and expensive. Hence, it is necessary to be cautious before adding any general requirement of such monitoring and instead use screening. To meet this end and to avoid differing interpretations (“concentrations and loads” or “presence?”), SE suggest moving the requirement in 21.3 (c) to the last section of paragraph 3.</p> <p>SE note that Annex D 3 regarding the minimum annual number of samples is related to the size of the treatment plant and not the agglomeration. It seems suitable to use the same model for the frequency of the monitoring in paragraph 21.4 (a) and (b).</p> |

| 3. Member States shall update their national implementation programmes at least every <del>5</del> <b>6</b> years. They shall submit them to the Commission by 31 December, except where they can demonstrate that they are in compliance with Articles 3 to 8.              |             |             |
|                                                                                                                                                                                                                                                                              |             |             |
| 4. The Commission is empowered to adopt implementing acts establishing the methods and formats for submission of the national implementation programmes. Those implementing acts shall be adopted in accordance with the examination procedure referred to in Article 28(2). |             |             |
|                                                                                                                                                                                                                                                                              |             |             |

5. Member States may include in their first national implementation programmes an extension of maximum six years of the following deadlines:

(a) the deadlines referred to in Article 3(2) and/or in Article 6(2) on the conditions that:

(i) less than 50 % of these agglomerations are provided with collecting systems and are not subject to secondary treatment on [OP please insert the date=day of entry into force of the Directive]; and

(ii) the national implementation programme includes:

- the number of agglomerations between 1 000 and 2 000 p.e. that lacks a collecting system and secondary treatment on [OP please insert the date=day of entry into force of the Directive]; and

- a plan detailing the necessary investments to reach full compliance for these agglomerations within the extended deadlines;

(b) the deadline for agglomerations referred to in Article 7(3) on the conditions that:

(i) at least 50 % of these agglomerations are not applying tertiary treatment on [OP please insert the date=day of entry into force of the Directive]; and

(ii) the national implementation programme includes:

- the number of agglomerations referred to in Article 7(3) lacking tertiary treatment on [OP please insert the date=day of entry into force of the Directive]; and

- a plan detailing the necessary investments to reach full compliance for these agglomerations within the extended deadlines;

The extensions of these deadlines shall be effective only if the above-mentioned conditions are fulfilled. The Commission shall notify the Member States if

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1. Member States shall ensure that, where damage to human health has occurred as a result of a violation of national measures that were adopted pursuant to this Directive, the individuals affected have the right to claim and obtain compensation for that damage from the relevant natural or legal persons <del>and, where appropriate, from the relevant competent authorities responsible for the violation.</del>                                                                                                             |             | It is of great importance that rights established on EU level are effective. However, the Member States have different legal traditions when it comes to how we should make those rights effective. SE is therefore generally opposed to the EU regulating procedural law issues and believes that those issues should primarily be left to the Member States themselves to regulate. Thus, SE is positive to the deletion of paragraph 26.2 and 26.4. |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <del>2. Member States shall ensure that, as part of the public concerned, non-governmental organisations promoting the protection of human health or the environment and meeting any requirements under national law are allowed to represent the individuals affected and bring collective actions for compensation. Member States shall ensure that a claim for a violation leading to a damage cannot be pursued twice, by the individuals affected and by the non-governmental organisations referred to in this paragraph.</del> |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| 1. <b><u>Without prejudice to the obligations of Member States under Directive 2008/99/EC of the European Parliament and of the Council of 19 November 2008 on the protection of the environment through criminal law,</u></b> Member States shall lay down the rules on penalties applicable to infringements of national provisions adopted pursuant to this Directive and shall take all measures necessary to ensure that they are implemented. The penalties provided for shall be effective, proportionate and dissuasive. <del>They shall include, as appropriate, financial penalties proportionate to the turnover of the legal person or to the salary of the natural person having committed the</del> |             | <p>SE support the suggested change. SE agrees that the article on sanctions should take the form of the agreed general approach in the IED, Article 79, (Council Decision of 16 March 2023, document No 7537/23).</p> <p>SE supports the deletion of the reference to turnover in this para, since turnover-based penalties risk being too administratively burdensome for the authorities concerned and would open the door to appeals by the responsible party regarding the size of the penalty. Further, this is not compatible with the Swedish system for corporate fines.</p> |

1. The ~~prior general binding rules~~ **regulations** and/or specific authorisations referred to in Article 14(1) shall ensure the following:

(a) the polluting substances contained in the non-domestic wastewater do not impede the operation of the wastewater treatment plant, do not damage collecting systems, wastewater treatment plants and associated equipment and do not prevent the reuse of treated water and the recovery of ~~sludge-nutrients or other materials~~ **from urban wastewater or sludge**;

(b) the polluting substances contained in the non-domestic wastewater do not harm the health of the staff working in collecting systems and urban wastewater treatment plants;

(c) the polluting substances contained in the non-domestic wastewater can be abated by the urban wastewater treatment plant ~~except those resulting from the natural degradation of organic matter producing toxic substances (e.g. H<sub>2</sub>S)~~;

(d) where an urban wastewater treatment plant treats discharges from an installation holding a permit referred to in Article 4 of Directive 2010/75/EU, the pollutant load from the discharges of that plant does not exceed the pollutant load that would be discharged if the discharges were released directly from the installation and were compliant with the emission limit values **applicable according to this Directive**. ~~set in accordance with Article 15(3) of that Directive and any additional measures taken in accordance with Article 18 of that Directive~~;

(e) the pollutant load in the discharge from the urban wastewater treatment plant does not deteriorate ~~the good ecological status or potential or good chemical~~ status of the receiving water body and does not prevent that water body from achieving such status, in accordance with the objectives set out in Article 4 of Directive 2000/60/EC.

2. The specific authorisation shall include an annex, which documents the fulfilment of all the conditions set out in point

| 1. The provisions of the specific authorisations shall be updated in the cases where the characteristics of the non-domestic wastewater, of the urban wastewater treatment plant or of the receiving water body change significantly to ensure that those conditions remain fulfilled. |             |             |

#### D. METHODS FOR MONITORING AND EVALUATION OF RESULTS

| <p>and, if necessary, in the inlet of the urban wastewater treatment plant. However, any time-based samples used to monitor micropollutants shall be 48-hour samples.</p> <p>Good international laboratory practices aiming at minimizing the degradation of samples between collection and analysis shall be applied.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                              | <p>of one daily sample per week) for parameters where preservation methods (e.g. cooling, freezing, acidification) can be used to avoid significant degradation of the target compound(s). This would enable higher representativity in general with regard to parameters required to be monitored in Art 21.3 without increasing the costs of analyses. For parameters whose compliance is to be assessed using annual averages, this option would provide a considerably better representativity than 52 daily samples.</p> |                           |                                                                    |                                                   |                                                                                |                         |                                                                                                              |  |                                                                                        |

| (c) <b>the progressive reduction of macroplastics in sewer overflow and discharges of urban runoff.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |             |             |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |             |             |
| 3. The measures to be taken to achieve the objectives referred to in point 2 accompanied with a clear identification of the actors involved and their responsibilities in the <del>implementation</del> <b>implementation</b> of the integrated plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |             |             |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |             |             |
| <p>4. When assessing which measures to be taken under point 3, Member States shall ensure that their competent authorities consider at least the following:</p> <p>(a) firstly, preventive measures aiming at avoiding the entry of unpolluted rain waters into collecting systems, including measures promoting natural water retention or rainwater harvesting, and measures increasing green spaces or limiting impermeable surfaces in the agglomerations;</p> <p>(b) secondly, measures to better manage and optimize the use of existing infrastructure including collecting systems, storage volumes, urban wastewater treatment plants with the aim to ensure that polluted rain waters are collected and treated, and releases of untreated urban wastewater into receiving waters are minimised;</p> <p>(c) finally, where necessary to achieve the objectives referred to in point 2, additional mitigation measures including the adaptation of the infrastructure for the collection, storage and treatment of urban wastewater or the creation of new infrastructures with a priority to green infrastructure such as vegetated ditches, treatment wetlands and storage ponds designed in order to support biodiversity. Where relevant, water reuse shall be considered in the context of the development of the integrated urban wastewater management plans referred to in Article 5.</p> |             |             |
