| <p>impervious and leak-proof, and that monitoring and inspection of the systems are carried out at regular and fixed intervals. <b><u>Where individual systems are used to collect and treat more than 2% of the urban wastewater load at national level from agglomerations of 2 000 p.e. and above, Member States should provide the Commission with justifications for the reasons for the use of individual systems instead of collecting systems, the level of compliance of those systems with established standards under this Directive and measures taken to reduce the use of such systems. The Commission should be empowered to adopt implementing acts to establish the format of the reporting and the level of details of the information to be provided by national authorities.</u></b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |                           |
| <p>(7) During rainfall, storm water overflows and urban runoff represent a sizeable remaining source of pollution discharged into the environment. Those emissions are expected to increase due to the combined effects of urbanisation and progressive change of the rain regime linked with climate change. Solutions to reduce that source of pollution should be defined at local level taking into account the specific local conditions. They should be based on an integrated quantitative and qualitative water management in urban areas. Therefore, Member States should ensure that integrated urban wastewater management plans are established at local level for all agglomerations of 100 000 p.e. and above as those agglomerations are responsible for a significant share of the pollution emitted. Furthermore, integrated urban wastewater management plans should also be put in place for agglomeration of between 10 000 p.e. and 100 000 p.e. where storm water overflows or urban runoff poses a risk for the environment or public health. <b><u>In order to ensure an adequate coverage of the integrated management plans and a comprehensive solution to storm water problems, they should be established for each urban wastewater drainage area of the concerned agglomerations.</u></b></p> |                                                                                     |                           |

|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>(8 bis)</b> In order to protect the environment, in particular the coastal and marine environment, and public health from being adversely affected by the discharge of insufficiently treated urban wastewater, secondary treatment should be applied to all discharges of urban wastewater from agglomerations of 1 000 p.e. and above. <b><u>Nevertheless enough time should be given to Member States to adapt their treatment infrastructures for agglomerations discharging their wastewaters into 'less sensitive areas' in coastal areas where 'appropriate treatment' is applied as defined in Council Directive 91/271/EEC. This adaptation time should be expanded in the case of Madeira due to the difficulty to install secondary treatment due to the specific geographical condition of the island.</u></b></p>                                                                                                                                                                                                                                   | <p><b>Delete the added sentences.</b></p> | <p>The minimum standard for waste water treatment for the protection of the environment in the European Union must be secondary treatment, without exemption. A particular regulation for Madeira is under no circumstances acceptable, as other examples could also fall under these restrictions.</p> |
| <p>(11) Recent scientific knowledge underpinning several Commission strategies<sup>2</sup> highlight the need to take action to address the issue of micropollutants, which are now detected <b><u>usually</u></b> in all waters in the Union. Some of those micropollutants are hazardous for public health and the environment even in <del>small quantities</del> <b><u>low concentrations of micrograms per litre or below</u></b>. An additional treatment, i.e. quaternary treatment, should therefore be introduced in order to ensure that a large spectrum of micropollutants is removed from urban wastewater. Quaternary treatment should first focus on organic micropollutants, which represent a significant part of the pollution and for which removal technologies are already designed. The treatment should be imposed based on the precautionary approach combined with a risk-based approach. Therefore, all urban wastewater treatment plants of 100 000 p.e. and above should provide quaternary treatment, as those facilities represent a</p> |                                           |                                                                                                                                                                                                                                                                                                         |

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|-----------------------------------|
| <p>significant share of micropollutant discharges in the environment and the removal of micropollutants by urban wastewater treatment plants at such scale is cost-effective. For agglomerations of between 10 000 p.e. and 100 000 p.e., Member States should be required to apply quaternary treatment to areas identified as sensitive to pollution with micropollutants based on clear criteria, which should be specified. Such areas should include locations where treated urban wastewater discharge to water bodies result in low dilution ratios, or where the receiving water bodies are used for the production of drinking water or as bathing waters. In order to avoid the requirement of quaternary treatment for agglomerations of between 10 000 p.e. and 100 000 p.e., Member States should be required to demonstrate the absence of risks to the environment or to public health on the basis of a standardised risk assessment. In order to give Member States enough time to plan and deliver the necessary infrastructures, the requirement of quaternary treatment should progressively apply until 2040 with clear interim objectives.</p> |  |                                   |
| <p>(16) The evaluation has also shown that the wastewater treatment sector offers the opportunity to significantly reduce its own energy consumption and to produce renewable energy, for example by better use of the available surfaces in urban wastewater treatment plants for solar energy production or by producing biogas from sludge. The evaluation also illustrated that, without clear legal obligations, only partial progress can be expected in this sector. In this context, Member States should be required to ensure that the total annual energy used by all urban wastewater treatment plants on their national territory treating a load of 10 000 p.e. and above does not exceed the production of energy from renewable sources as defined in Article 2(1) of Directive (EU) 2018/2001 of the European Parliament and of the Council<sup>3</sup>, by those urban wastewater treatment plants. <b><u>In order to take into</u></b></p>                                                                                                                                                                                                        |                                                                                     | <p>Support for suggested text</p> |

<sup>3</sup> Directive (EU) 2018/2001 of the European Parliament and of the Council of 11 December 2018 on the promotion of the use of energy from renewable sources (OJ L 328, 21.12.2018, p. 82).

| <p>Parliament and of the Council<sup>7</sup> and with Directive (EU) 2018/2001 in which urban wastewater treatment sites are qualified as 'go-to' areas for renewables, meaning a location designated as particularly suitable for the installation of plants for the production of energy from renewable sources. In order to reach the objective of energy neutrality via optimal measures for each urban wastewater treatment plant and for the collection system, Member States should ensure that energy audits are carried out in accordance with Article 8 of Directive 2012/27/EU of the European Parliament and of the Council<sup>8</sup> every four years. Those audits should include an identification of the potential for cost-effective use or production of renewable energy following the criteria set out in Annex VI to Directive 2012/27/EU.</p>                                                                                                                                                                                                                                                  |                           |                           |
| <p>(19) Urban wastewater treatment plants also receive non-domestic wastewater, including industrial wastewater, which can contain a range of pollutants not explicitly covered by Directive 91/271/EEC, such as heavy metals, microplastics, micropollutants and other chemicals. <b><u>This non-domestic wastewater may come from industries, or commercial establishments, or hospitals and other medical facilities, etc.</u></b> In most instances, there is a poor understanding and knowledge of such pollution which could deteriorate the functioning of the treatment process and contribute to the pollution of the receiving waters, but also prevent the recovery of sludge and the reuse of treated wastewater. Member States should therefore regularly monitor and report on such non-domestic pollution that enters the urban wastewater treatment plants and is discharged into water bodies. To prevent pollution from non-domestic wastewater discharges at source, releases from industries or enterprises connected to collecting systems should be subject to prior authorisation. In order</p> |                           |                           |

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|---------------------------|
| <p>to ensure that collecting systems and urban wastewater treatment plants are technically capable of receiving and treating the incoming pollution, the operators who manage urban wastewater treatment plants receiving non-domestic wastewater should be consulted before those permits are issued and should be able to consult the issued permits in order to be able to adapt their treatment processes. Where non-domestic pollution is identified in the incoming waters, Member States should take appropriate measures to reduce pollution at source, by enhancing the monitoring of pollutants in collecting systems so that the pollution sources can be identified and, where necessary, by reviewing the authorisations provided to relevant, connected urban wastewater treatment plants.</p>                                                                                                                                                                                                                                                                                                                                                         |                           |                           |
| <p><del>(18)</del> <b>(19 bis)</b> The water resources of the Union are increasingly under pressure, resulting in permanent or temporary water scarcity in some areas of the Union. The Union's ability to respond to the increasing pressures on water resources could be improved through a wider reuse of treated urban wastewater, limiting freshwater abstraction from surface and groundwater bodies. Therefore, the reuse of treated urban wastewater should be encouraged and applied whenever appropriate, whilst taking into account the need to ensure that the objectives of good ecological and chemical status of the receiving bodies, as defined in Directive 2000/60/EC, are met. The reinforcement of the requirements for the treatment of urban wastewater, and the actions to better monitor, track and reduce pollution at source, will have impacts on the quality of treated urban wastewater, and will therefore support water reuse. Where water reuse serves the purpose of agricultural irrigation, it should be carried out in accordance with Regulation (EU) 2020/741 of the European Parliament and of the Council <sup>9</sup>.</p> |                           |                           |

<sup>9</sup> Regulation (EU) 2020/741 of the European Parliament and of the Council of 25 May 2020 on minimum requirements for water reuse (OJ L 177, 5.6.2020, p. 32).

| <p>(28) The evaluation concluded that sludge management could be improved to better align it with the principles of the circular economy and of the waste hierarchy as defined in Article 4 of Directive 2008/98/EC. The actions to better monitor and reduce pollution at source from non-domestic discharges will help improving the quality of the sludge produced and ensure its safe use in agriculture. In order to ensure a proper and safe recovery of nutrients, including the critical substance phosphorus, from the sludge, minimum recovery rates should be defined at Union level.</p> <p><b><u>The recovered nutrients shall be used as substitutes for primary nutrients, for example, in the production of fertilizers.</u></b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p><b>Please add at the end:</b></p> <p>Member States ensure the use of recovered nutrients by legal regulation.</p> | <p>Due to price differences between natural and recovered nutrients, the use of substitutes is not guaranteed. Member States shall ensure the use of substitutes on national level.</p> |
| <p>(29) <del>Additional</del> <b><u>Adequate</u></b> monitoring is necessary to verify compliance with the new requirements concerning micropollutants, non-domestic pollution, energy neutrality, GHG emissions, <del>storm water</del> <b><u>sewer</u></b> overflows and <b><u>polluted</u></b> urban runoff <b><u>discharges</u></b>. <b><u>Microplastics and relevant micropollutants should be monitored, where relevant, in sewer overflow discharges with a representative sampling programme which would inform concentration adopted for water quality modelling. This monitoring should be updated on a regular basis to ensure the modelling continues to be representative of local conditions.</u></b> To verify the performance of the quaternary treatment concerning the reduction of micropollutants in urban wastewater discharges, it is sufficient to monitor a limited set of representative micropollutants. The monitoring frequencies should be aligned to the current best practices, as currently practiced in Switzerland. To remain cost-effective, those obligations should be adapted to the size of the urban wastewater treatment plants and of the agglomerations. The monitoring will also contribute to provide data for the overall Environmental Monitoring Framework as set up under the 8th Environmental Action Programme, and more specifically feed the Zero Pollution Monitoring Framework underpinning it.</p> |                                                                                                                      |                                                                                                                                                                                         |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                           |                           |
| 1. This Directive lays down rules on the collection, treatment, and discharge of urban wastewater, to protect the environment and human health while progressively <del>eliminating</del> <b>reducing</b> greenhouse gas emissions <del>to</del> <b>sustainable levels</b> and improving the energy balance of urban wastewater collection and treatment activities. It also lays down rules on access to sanitation, on transparency of the urban wastewater sector and on the regular surveillance of public health relevant parameters in urban wastewaters. |                           |                           |

|                                                                                                                                                                                                                                                                        |                                     |                                                                                                                                             |
| For the purpose of this Directive, the following definitions apply:                                                                                                                                                                                                    |                                     |                                                                                                                                             |
|                                                                                                                                                                                                                                                                        | <b>'dry weather flow' means ...</b> | With reference to Art. 5 (2) b), a definition of dry weather conditions is missing, or vice versa a definition for rain weather conditions. |
| (1) 'urban wastewater' means domestic wastewater <del>or, the mixture of domestic wastewater</del> <b>mixed with and either</b> non-domestic wastewater <del>and/or the mixture of domestic wastewater and</del> <b>with and</b> urban runoff, <b>or both of them;</b> |                                     |                                                                                                                                             |
| (2) 'domestic wastewater' means wastewater from residential settlements, <del>and</del> services <b>and institutions</b> which originates predominantly from the human metabolism and/or from household activities;                                                    |                                     |                                                                                                                                             |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | [Insert MS name] proposal | [Insert MS name] comments |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|---------------------------|
| <p>(3) 'non-domestic wastewater' means <del>any</del> wastewater, <b>other than domestic wastewater and urban runoff</b>, which is discharged into <del>collecting systems</del> from premises used for either the following:</p> <p>(a) the exercise of a trade;</p> <p>(b) <del>activities carried out by an institution;</del></p> <p>(c) <del>or</del> industrial <b>or economical</b> activities;</p> <p><u>The wastewaters from the above activities, that are only domestic wastewater (from toilets or kitchens with food preparation) are entitled as domestic wastewaters.</u></p> |                           |                           |
| <p>(4) 'agglomeration' means an area where the <b>population (expressed in population equivalent), combined or not with and/or economic activities</b> <del>pollution load of urban wastewater</del> is sufficiently concentrated (<b>taking as a reference 10 p.e. per hectare or above</b>) for urban wastewater to be collected and conducted to <b>one or more</b> <del>an</del> urban wastewater treatment plants or to a <b>one or more</b> final discharge points. <u>into receiving waters;</u></p>                                                                                  |                           |                           |
| <p>(5) 'urban runoff' means <b>precipitation</b> <del>rainwater</del> from agglomerations collected by combined or separate sewers;</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                           |                           |
| <p>(6) '<del>sewer storm water</del> overflow' means discharge of untreated urban wastewater <b>into</b> receiving waters from <b>separate or</b> combined sewers <del>caused by rainfall;</del></p>                                                                                                                                                                                                                                                                                                                                                                                         |                           |                           |
| <p>(7) 'collecting system' means a system of conduits which collects and conducts urban wastewater;</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                           |                           |
| <p>(8) 'combined sewer' means a <b>single</b> conduit <del>that that designed to</del> collects and conducts urban wastewater <b>including urban runoff; including urban runoff;</b></p>                                                                                                                                                                                                                                                                                                                                                                                                     |                           |                           |

| <p>(9) 'separate sewer' means a <b>system of</b> conduits that separately collects and conducts <b>either urban runoff or either of the following</b>:</p> <p>(a) <del>domestic</del> <b>urban</b> wastewater <b>not including urban runoff</b>;</p> <p>(b) <del>non-domestic wastewater</del> <b><u>non-domestic wastewater</u></b>;</p> <p>(c) <del>a mixture of domestic and non-domestic wastewater</del>;</p> <p>(d) <del>rainwater from agglomerations</del>;</p> |                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p>(10) '1 population equivalent' or '(1 p.e.)' means <del>the unit expressing the average potential water pollution load caused by one person per day, where 1 p.e. is the organic biodegradable load</del> <b>per day</b> having a five-day biochemical oxygen demand (BOD5) of 60 g of oxygen <del>per day</del> <b>per day</b>;</p>                                                                                                                                 |                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p><b>(10 bis) [NEW] 'primary treatment' means treatment of urban wastewater by a physical and/or chemical process involving settlement of suspended solids, or other processes in which the BOD5 of the incoming wastewater is reduced by at least 20% before discharge and the total suspended solids of the incoming wastewater are reduced by at least 50%.</b></p>                                                                                                 | <p><b>To be deleted</b></p> | <p>By adding the definition for primary treatment, a technical standard is introduce. For wastewater treatment plants with equipped with any kind of primary treatment step, a minimum standard (20%/50%) would apply. Nevertheless, there are treatment methods which would require less primary treatment rates (such as treatment by membrane filtration). The primary treatment rate should always be adapted to the overall technical solution.</p> <p>In addition, as the minimum treatment in the European Union must always be secondary treatment, the introduction of a definition for primary treatment is obsolete.</p> |
| <p>(11) 'secondary treatment' means treatment of urban wastewater by a process generally involving biological treatment with a secondary settlement or <del>another process</del> <b>which reduces removes most of biodegradable organic matter in from</b> urban wastewater;</p>                                                                                                                                                                                       |                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <p>1. <del>By way of derogation</del> <b>Member States may derogate</b> from Article 3, <del>where exceptionally</del> <b>if</b> the establishment of <b>or the connection to</b> a collecting system is not justified either because it would produce no environmental <b>or health</b> benefit, <b>it is not technically feasible</b> or because it would involve excessive cost.</p> <p><b>If derogating from Article 3</b>, Member States shall ensure that individual systems for the <b>collection, storage and, when applicable, treatment</b> of <del>urban-domestic</del> <b>urban</b> wastewaters ('individual systems') are used <del>for in</del> <b>for in agglomerations of 1 000 p.e. and above.</b></p> | <p><b>Delete again:</b></p> <p>"or the connection to" and</p> <p>"it is not technically feasible"</p> | <p>It can in no way be justified that a connection to an existing public sewer would not let to environmental benefits. There is a need to use the investment in a sewer by public money under all circumstances, as otherwise the investment would not make sense at all. In addition, it is always technically feasible to connect to a public sewer, as there is always a technical solution.</p> |

| <p>2. Member States shall ensure that individual systems are designed, operated and maintained in a manner that <del>ensures at least</del> <b>achieves</b> the same level of <b>environmental protection</b> treatment as the secondary and tertiary treatments referred to in Articles 6 and 7. <del>Tertiary treatment for individual systems will only be required in those cases that individual systems are discharging in a sensitive area or a catchment area.</del></p> <p><del>This requirement will apply to existing individual systems six years after 2033.</del></p>                                                                                                                                                                                |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <p>3. [NEW] Member States shall ensure that <b>individual systems that are used in agglomerations of 1 000 p.e. and above</b>, where individual systems are used are registered in a <del>public</del> <b>national, or regional or local</b> registry and that regular inspections <b>or other means of regular checks or control</b> of those systems, <b>on the basis of a risk-based approach</b>, are carried out by the appropriate authority <b>or other body authorised at national, or regional or local level</b>.</p>                                                                                                                                                                                                                                    | <p>Delete again:<br/>“on the basis of a risk-based approach,”</p>                   | <p>Member States are obliged to carry out checks or control. There is no need to introduce a RBA, as Member States can decide about the way, may it be on the basis of a RBA or in any other way.</p> <p>In case an annual inspection is already carried out, operator might request minor checks on the basis of a RBA, which would lead to less control and a higher risk for the environment. In addition, plants under standard EN 12566-3 require regular checks without RBA!</p> |
| <p><del>34.</del> The Commission is empowered to adopt <del>delegated implementing acts in accordance with the procedure referred to in Article 27 to supplement this Directive by that</del> <b>shall be adopted in accordance with the examination procedure referred to in Article 28(2) for</b> establishing minimum requirements <del>on</del> <b>for</b>:</p> <p>(a) the design, operation, and maintenance of individual system; and</p> <p>(b) <del>by specifying the requirements for the regular inspections referred to in paragraph 2 3,</del> <b>on the basis of a risk-based approach</b> <del>second subparagraph.</del></p> <p><b>The Commission will provide the requirements by {24 months from the entry into force of this Directive}.</b></p> |                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | [Insert MS name] proposal                    | [Insert MS name] comments                                                                                                                                                 |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>45. Member States that use individual systems to treat more than 2% of the urban wastewater load <b>at national level</b> from agglomerations of 2 000 p.e. and above shall provide the Commission with a detailed justification for the use of individual systems in each of the agglomerations <b>in each of the agglomerations</b>. That justification shall:</p> <p>(a) demonstrate <del>for each of those agglomerations</del> that the conditions for using individual systems set out in paragraph 1 are fulfilled;</p> <p>(b) describe the measures taken in accordance with paragraph 2 <b>and 3</b>;</p> <p>(c) demonstrate compliance with the minimum requirements referred to in paragraph 34 where the Commission has exercised its <del>delegated</del> <b>implementing</b> power under that paragraph.</p> | <p>Delete again:<br/>“at national level”</p> | <p>It is highly relevant to check every single agglomerartion &gt; 2000 pe. Thus, an overall national approach with an average of more than 2% is the wrong approach.</p> |
| <p>56. The Commission is empowered to adopt implementing acts establishing the format for submitting the information referred to in paragraph 45. Those implementing acts shall be adopted in accordance with the examination procedure referred to in Article 28(2). <b>The Commission will provide the format by <u>f24 months</u> from the entry into force of this Directive</b>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                              |                                                                                                                                                                           |

## ARTICLE 5 - INTEGRATED URBAN WASTEWATER AND POLLUTED URBAN RUNOFF MANAGEMENT PLANS

|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><del>1. Member States shall monitor the presence of the following public health parameters in urban wastewater:</del></p> <p><del>(a) SARS-CoV-2 virus and its variants;</del></p> <p><del>(b) poliovirus;</del></p> <p><del>(c) influenza virus;</del></p> <p><del>(d) emerging pathogens;</del></p> <p><del>(e) contaminants of emerging concern;</del></p> <p><del>(f) any other public health parameters that are considered relevant by the competent authorities of the Member States for monitoring.</del></p> <p>21. For the purpose of paragraph 1, Member States shall set up a national system for <del>permanent</del> cooperation and coordination between competent authorities responsible for public health and competent authorities responsible for urban wastewater treatment with regard to:</p> <p>(a) the identification of <del>other</del> <b>relevant</b> public health parameters <del>than the ones referred to in paragraph 1</del> that are to be monitored <b><u>at least in the inlet of</u></b> urban wastewater <b><u>treatment plants</u></b>, such as those in the following list:</p> <p><b>(i) SARS-CoV-2 virus and its variants <u>of interest</u>;</b></p> <p><b>(ii) poliovirus;</b></p> <p><b>(iii) influenza virus;</b></p> <p><b>(iv) emerging pathogens;</b></p> <p><del><b>(v) contaminants of emerging concern;</b></del></p> <p><b><u>(vi)</u> (v) any other public health parameters that are considered relevant by the competent authorities of the Member States for monitoring;</b></p> <p>(b) the determination of the location and the frequency of urban wastewater sampling and analysis for each public health parameter identified in accordance with <del>paragraph 4(a), taking into account</del> <b>thus regarding</b> the available health data and the needs in terms of public health data and, where relevant, the local epidemiological situations;</p> <p>(c) the organisation of an appropriate and timely communication of the monitoring results to the competent authorities responsible for public health and to Union</p> | <p><b>Please add:</b></p> <p>(v)pathogens / genes associated with antimicrobial resistance</p> <p>Change (v) into (vi)</p> | <p>It is still unclear, what the outcome of measuring AMR in waste water treatment plant could mean. It is clear that AMR will always be found in wwtp as well as in the natural environment, such as surface waters. Thus, the cooperating competent authorities should be able to adapt the national system of monitoring AMR accordingly. For this reason, it is suggested that the requirement to measure AMR should also be covered in para 1 (a). The text in paragraphe (3) can be deleted accordingly.</p> <p>Secondly, the term AMR is not specified. Overall, AMR is a sum parameter. A method to analyse AMR is currently not available.</p> <p>By adding the AMR to the list of examples in para. 1, the AMR is given a signal position without there being an obligation for the member states to apply a method that has not yet been scientifically researched.</p> |

| <p>1. Member States shall take the necessary measures to ensure that sludge management routes are conform to the waste hierarchy provided for in Article 4 of Directive 2008/98/EC. Such routes shall maximize prevention, <b>preparing for</b> reuse, <del>and recycling and other material recovery</del> of resources and minimize the adverse effects on the environment.</p>                                                                                                                                                                                                                                                                                                                                                 | Supported                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Germany supports the proposed additions, noting that the direct use of sewage sludge as a secondary fertilizer has advantages, but also a large number of disadvantages. In particular, the input of pollutants is to be seen here. The organic pollutants which are destroyed by thermal pre-treatment in the course of phosphorus recycling processes should be emphasized. This results in a real relief of the environment. Therefore, a soil-related recycling of sewage sludge should only be possible in exceptional cases.</p> |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>4. The monitoring referred to in the first and second sub <del>this</del> paragraphs 3 shall be carried out with the following frequencies:</p> <p>(a) at least two samples per year, with maximum 6-7 months between the samples, for agglomerations of <del>100 000</del> <b>150.000</b> p.e. and more <del>above</del>;</p> <p>(b) at least one sample every 2 <b>two</b> years for agglomerations of between 10 000 p.e. and 100 000 p.e.</p> <p><b>[NEW] The This</b> monitoring frequency <del>established in this paragraph</del> may be halved in subsequent years if the monitoring results for the pollutants referred to in <del>this</del> paragraph 3 are below <del>standards applicable Environmental Quality Standards</del> under Directive 2008/105/EC <del>or below detection limits or below limits of quantification</del> during the first three <del>successive</del> years of the monitoring. The monitoring frequency should be reviewed at least every year.</p> | <p><b>Insert:</b></p> <p>3. Member States shall put in place monitoring requirements with regard to the potential presence of the substances listed in paragraphs 1 and 2 of this article in urban runoff discharged from separate urban runoff systems at relevant points in agglomerations of 10.000 p.e. and above where urban runoff is expected to be polluted in such a way that its discharge into receiving waters can be considered as a risk to the environment or human health.</p> <p>Based on the outcome of this monitoring, Member States shall ensure that measures to reduce the pollution from urban runoff discharges are considered and that relevant and feasible measures, taking in to account the cost-benefit principle, are identified.</p> <p>Where appropriate, these measures shall be included in the programmes of measures referred to in Article 11 of the Directive 2000/60/EC.</p> <p><del>4. The monitoring referred to in the first and second sub this paragraphs 3 shall be carried out with the following frequencies:</del></p> <p><del>(a) at least two samples per year, with maximum 6-7 months between the samples, for agglomerations of 100 000 150.000 p.e. and more above;</del></p> <p><del>(b) at least one sample every 2 two years for agglomerations of between 10 000 p.e. and 100 000 p.e.</del></p> <p><del><b>[NEW] The This</b> monitoring frequency <del>established in this paragraph</del> may be halved in subsequent years if the monitoring results for the pollutants referred to in this paragraph 3 are below <del>standards applicable Environmental Quality Standards</del> under Directive 2008/105/EC <del>or below detection limits or below limits of quantification</del> during the first three <del>successive</del> years of the monitoring. The monitoring frequency should be reviewed at least every year.</del></p> | <p>Concept of the watch list approach under art 13 of the new drinking water directive.</p> <p>We make reference to the substances listed in paragraph 1 and 2. If deemed relevant, an implementing act to identify a list the pollutants of concern linked to urban runoff, can be included here.</p> <p>We focus on the identification of measures to reduce pollution for urban runoff and make reference to the programme of measure under the water framework directive.</p> <p>Flexibility is needed on who will be the responsible party for taking the measures. It is not per definition the operator of the collecting system for urban runoff who will be made responsible.</p> |

| <p>1. Member States shall ensure that, in accordance with the relevant national legal system, members of the public concerned have access to a review procedure before a court of law, or another independent and impartial body established by law to challenge the substantive or procedural legality of decisions or acts or omissions subject to Articles 6, 7 or 8 of this Directive when at least one of the following conditions is met:</p> <p>(a) they have a sufficient interest;</p> <p>(b) they maintain the impairment of a right, where administrative procedural law of a Member State requires this as a precondition.</p> <p><b>Standing in the review procedure shall not be conditional on the role that the concerned member of the public played during a participatory phase of the decision-making procedures under this Directive.</b></p> <p>The review procedure shall be fair, equitable, timely and not prohibitively expensive, and shall provide for adequate and effective redress mechanisms, including injunctive relief as appropriate.</p> |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                           |                           |

| <p>1. Member States shall ensure that, where damage to human health has occurred as a result of a violation of national measures that were adopted pursuant to this Directive, the individuals affected have the right to claim and obtain compensation for that damage from the relevant natural or legal persons and, where appropriate, from the relevant competent authorities responsible for the violation.</p>                                                                                                                        | <p><b>Proposed text to be deleted:</b></p> <p><del>1. Member States shall ensure that, where damage to human health has occurred as a result of a violation of national measures that were adopted pursuant to this Directive, the individuals affected have the right to claim and obtain compensation for that damage from the relevant natural or legal persons.</del></p> <p><b>To be replaced by:</b></p> <p>1. Member States shall ensure that, where damage to human health has occurred as a result of a <b>negligent or intended</b> violation of national measures that were adopted pursuant to this Directive <b>which have protective effect towards the injured person</b>, the individuals affected have the right to claim and obtain compensation for that damage from the relevant natural or legal persons <b>in accordance with national law</b></p> | <p>We welcome the deletion of official liability. Nonetheless, the proposed liability is not overseeable. Civil liability is not harmonised in the EU. Questions of civil liability should therefore be left to the civil law of Member States. Therefore, Article 26 should be deleted entirely.</p> <p>In the spirit of compromise, Germany could agree to keep the first paragraph only if it is amended as proposed and if the rest of the article is deleted.</p> <p>It is essential, that liability should only occur when a provision is violated that is aimed to protect third parties, in regard of this directive, when a provision serves to protect the health of individuals. However, Article 26 (1) as it stands links liability to any violation of national measures that were adopted pursuant to this Directive. Therefore, the liability proposed in this provision is unclear and too broad in this regard. In addition, paragraph 1 has to include the pre-requisite of fault (i.e., negligence and intent) that is necessary for any civil liability.</p> |

| 1. The power to adopt delegated acts is conferred on the Commission subject to the conditions laid down in this Article.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |                           |
| 2. The power to adopt delegated acts referred to in Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), and 24(3) shall be conferred on the Commission for a period of five years from [OP please insert the date = the date of entry into force of this Directive]. The Commission shall draw up a report in respect of the delegation of power not later than nine months before the end of the five-year period. The delegation of power shall be tacitly extended for periods of an identical duration unless the European Parliament or the Council opposes such extension not later than three months before the end of each period. |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |                           |
| 3. The delegation of power referred to in Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), and 24(3) may be revoked at any time by the European Parliament or by the Council. A decision to revoke shall put an end to the delegation of the power specified in that decision. It shall take effect the day following the publication of the decision in the Official Journal of the European Union or at a later date specified therein. It shall not affect the validity of any delegated acts already in force.                                                                                                                      |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |                           |

| 4. Before adopting a delegated act, the Commission shall consult experts designated by each Member State in accordance with the principles laid down in the Interinstitutional Agreement of 13 April 2016 on Better Law-Making.                                                                                                                                                                                                                                                                                                                                                              |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |                           |
| 5. As soon as it adopts a delegated act, the Commission shall notify it simultaneously to the European Parliament and to the Council.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |                           |
| 6. A delegated act adopted pursuant to Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), or 24(3) shall enter into force only if no objection has been expressed either by the European Parliament or by the Council within a period of two months of notification of that act to the European Parliament and the Council or if, before the expiry of that period, the European Parliament and the Council have both informed the Commission that they will not object. That period shall be extended by two months at the initiative of the European Parliament or of the Council. |                           |                           |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                   |                                   |
| <p>(2) Directive 91/271/EEC sets the legal framework for the collection, treatment and discharge of urban wastewater and the discharge of biodegradable wastewaters from certain industrial sectors. <b><u>Urban wastewaters can be formed by different mixtures of domestic wastewaters, urban runoff and non-domestic wastewater from other origins. Wastewater from institutions such as offices, schools, kitchens with food preparation, etc. which are predominantly originated from the human metabolism, qualifies as domestic wastewaters as well.</u></b> Its objective is to protect the environment from being adversely affected by insufficiently treated urban wastewater discharges. This Directive should continue to pursue the same objective, whilst also contributing to the protection of public health, when for instance urban wastewater is discharged in bathing waters or in water bodies used for the abstraction of drinking water, or when urban wastewater is used as an indicator for parameters relevant for public health. It should also improve access to sanitation and to key information related to the governance of the urban wastewater collection and treatment activities. Finally, this Directive should contribute to the progressive <del>elimination</del> <b>reduction</b> of greenhouse gas (GHG) emissions from urban wastewater collection and treatment activities, <del>notably by further reducing nitrogen emissions</del> but also by promoting energy efficiency and production of renewable energies, and thus should contribute to the 2050 objective of Climate</p> |                   | <p>Text proposal is suitable.</p> |

| Neutrality established under Regulation (EU) 2021/1119 of the European Parliament and of the Council <sup>1</sup> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <p>(5) In order to ensure effective treatment of urban wastewater before discharge into the environment, all urban wastewaters from agglomerations of 1 000 p.e. and above should be collected in centralised collecting systems, <u>unless they justify a derogation for the use of individual systems under paragraph 1 of Article 4.</u> <b>When delineating their agglomerations, Member States should take into account the indicative reference threshold of 10 to 25 p.e. per hectare above which the population, possibly combined with economic activities, located in a specific area are considered sufficiently concentrated.</b> Where <del>centralised collecting</del> <del>such</del> systems are already in place, Member States should ensure that all sources of urban wastewater are connected to them.</p>                                           | <p>(5) In order to ensure effective treatment of urban wastewater before discharge into the environment, all urban wastewaters from agglomerations of <b>1 000 1500</b> p.e. and above should be collected in centralised collecting systems, unless they justify a derogation for the use of individual systems under paragraph 1 of Article 4. When delineating their agglomerations, Member States should take into account the indicative reference threshold of 10 to 25 p.e. per hectare above which the population, <b>possibly combined with and/or</b> economic activities, located in a specific area are considered sufficiently concentrated. Where collecting systems are already in place, Member States should ensure that all sources of urban wastewater are connected to them.</p>                                  | <p>As a compromise, we find it important that the scope of the Directive must not be lowered to agglomerations below 1500 p.e in order to better manage the investment needs (the reasons are discussed in more detail below under Article 3 comments).</p> <p>We prefer that the proposed 'population possibly combined with economic activities' should be replaced with 'population and/or economic activities' to provide Member States with the flexibility to also consider only economic activities in the formation of agglomeration as is also provided in the current Directive.</p> <p>We support moving the numerical non-binding/indicative reference threshold for formation of agglomeration to recital 5.</p> |
| <p>(6) <del>Exceptionally, where</del> <b>Where</b> it can be demonstrated that the establishment of a centralised urban wastewater collecting system would produce no environmental benefit, <b>would not be technically feasible</b>, or <b>would</b> involve excessive costs, Member States should be allowed to use individual systems to <b>collect and</b> treat urban wastewater, as long as they ensure the same level of <b>protection of the environment</b> <del>treatment as secondary and tertiary treatment</del>. For this purpose, Member States should establish national registers to identify individual systems used on their territory and take all necessary measures to ensure that the design of such systems is adequate, that the systems are properly maintained and that they are subject to a regular compliance control. In particular,</p> | <p>(6) Where it can be demonstrated that the establishment of a centralised urban wastewater collecting system would produce no environmental <b>or health</b> benefit, would not be technically feasible, or would involve excessive costs, Member States should be allowed to use individual systems to collect and, <b>when applicable</b>, treat urban wastewater, as long as they ensure the same level of protection of the environment. For this purpose, Member States should establish national, <b>regional or local</b> registers to identify individual systems used on their territory and take all necessary measures to ensure that the design of such systems is adequate, that the systems are properly maintained and that they are subject to a regular compliance control <b>on the basis of a risk-based</b></p> | <p>These changes are related to the changes made in Article 4.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

<sup>1</sup> Regulation (EU) 2021/1119 of the European Parliament and of the Council of 30 June 2021 establishing the framework for achieving climate neutrality and amending Regulations (EC) No 401/2009 and (EU) 2018/1999 ('European Climate Law') (OJ L 243, 9.7.2021, p. 1).

| <p>(7) During rainfall, storm water overflows and urban runoff represent a sizeable remaining source of pollution discharged into the environment. Those emissions are expected to increase due to the combined effects of urbanisation and progressive change of the rain regime linked with climate change. Solutions to reduce that source of pollution should be defined at local level taking into account the specific local conditions. They should be based on an integrated quantitative and qualitative water management in urban areas. Therefore, Member States should ensure that integrated urban wastewater management plans are established at local level for all agglomerations of 100 000 p.e. and above as those agglomerations are responsible for a significant share of the pollution emitted. Furthermore, integrated urban wastewater management plans should also be put in place for agglomeration of between 10 000 p.e. and 100 000 p.e. where storm water overflows or urban runoff poses a risk for the environment or public health. <b><u>In order to ensure an adequate coverage of the integrated management plans and a comprehensive solution to storm water problems, they should be established for each urban wastewater drainage area of the concerned agglomerations.</u></b></p> | <p>(7) During rainfall, storm water overflows and urban runoff represent a sizeable remaining source of pollution discharged into the environment. Those emissions are expected to increase due to the combined effects of urbanisation and progressive change of the rain regime linked with climate change. The main thing regarding integrated urban wastewater management plans is that the respective agglomerations or catchment areas are covered by the plan/plans. Member States have also an option to use other nationally prepared and established plans which include at least the same elements as it is set out for integrated urban wastewater management plans to 4imple this requirement of establishing integrated urban wastewater management plans.                                                                                                                                                                                                |                                                                                                                                                                                                                                |
| <b>(8 bis)</b> In order to protect the environment, in particular the coastal and marine environment, and public health from being adversely affected by the discharge of insufficiently treated urban wastewater, secondary treatment should be applied to all discharges of urban wastewater from agglomerations of 1 000 p.e. and above. <u>Nevertheless enough time should be given to Member States to adapt their treatment infrastructures for agglomerations discharging their wastewaters into 'less sensitive areas' in coastal areas where 'appropriate treatment' is applied as defined in Council Directive 91/271/EEC. This adaptation time should be expanded in the case of Madeira due to the difficulty to install secondary treatment due to the specific geographical condition of the island.</u> | (8 bis) In order to protect the environment, in particular the coastal and marine environment, and public health from being adversely affected by the discharge of insufficiently treated urban wastewater, secondary treatment should be applied to all discharges of urban wastewater from agglomerations of <del>1 000</del> 1500 p.e. and above. Nevertheless enough time should be given to Member States to adapt their treatment infrastructures for agglomerations discharging their wastewaters into 'less sensitive areas' in coastal areas where 'appropriate treatment' is applied as defined in Council Directive 91/271/EEC. This adaptation time should be expanded in the case of Madeira due to the difficulty to install secondary treatment due to the specific geographical condition of the island. | In relation to our comments on recital 5, we find it important that the scope of the Directive must not be lowered to agglomerations below 1500 p.e (the reasons are discussed in more detail below under Article 3 comments). |
| (11) Recent scientific knowledge underpinning several Commission strategies <sup>2</sup> highlight the need to take action to                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | (11) Recent scientific knowledge underpinning several Commission strategies <sup>3</sup> highlight the need to take action to                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | These changes are related to our previous comments on Article 8 according to which in Estonia due to lower usage                                                                                                               |

| <p>address the issue of micropollutants, which are now detected <u>usually</u> in all waters in the Union. Some of those micropollutants are hazardous for public health and the environment even in <del>small quantities</del> <b>low concentrations of micrograms per litre or below</b>. An additional treatment, i.e. quaternary treatment, should therefore be introduced in order to ensure that a large spectrum of micropollutants is removed from urban wastewater. Quaternary treatment should first focus on organic micropollutants, which represent a significant part of the pollution and for which removal technologies are already designed. The treatment should be imposed based on the precautionary approach combined with a risk-based approach. Therefore, all urban wastewater treatment plants of 100 000 p.e. and above should provide quaternary treatment, as those facilities represent a significant share of micropollutant discharges in the environment and the removal of micropollutants by urban wastewater treatment plants at such scale is cost-effective. For agglomerations of between 10 000 p.e. and 100 000 p.e., Member States should be required to apply quaternary treatment to areas identified as sensitive to pollution with micropollutants based on clear criteria, which should be specified. Such areas should include locations where treated urban wastewater discharge to water bodies result in low dilution ratios, or where the receiving water bodies are used for the production of drinking water or as bathing waters. In order to avoid the requirement of quaternary treatment for agglomerations of between 10 000 p.e. and 100 000 p.e., Member States should be required to demonstrate the absence of risks to the environment or to public health on the basis of a standardised risk assessment. In order to give Member States enough time to plan and deliver the necessary infrastructures, the requirement of quaternary treatment should progressively apply until 2040 with clear interim objectives.</p> | <p>address the issue of micropollutants, which are now detected usually in all waters in the Union. Some of those micropollutants are hazardous for public health and the environment even in low concentrations of micrograms per litre or below. For agglomerations of between 10 000 p.e. and 100 000 p.e.,</del> Member States should be required to apply quaternary treatment to <b>urban wastewater treatment plants serving agglomerations of 10 000 p.e. and above</b> for areas identified as sensitive to pollution with micropollutants based on clear criteria, which should be specified. Such areas should include locations where treated urban wastewater discharge to water bodies result in low dilution ratios, or where the receiving water bodies are used for the production of drinking water or as bathing waters. In order to avoid the requirement of quaternary treatment for agglomerations of <del>between</del> 10 000 p.e. and <b>above 100 000 p.e.</b>, Member States should be required to demonstrate the absence of risks to the environment or to public health on the basis of a standardised risk assessment. In order to give Member States enough time to plan and deliver the necessary infrastructures, the</p> | <p>of cosmetics and pharmaceuticals compared with bigger Member States (see also previous Estonian comments on article 9), the costs of installing quaternary treatment stage to all large WWTP-s treating a load of 100 000 p.e. and above (or according to new threshold 150 000 p.e. and above) are not proportional to the accompanying benefits to human health and the environment. Thus, this requirement to install quaternary treatment should not automatically apply to all large WWTP-s. the requirement to install quaternary treatment stage to WWTPs in order to remove micro-pollutants should only be based on the results of a risk assessment and should be left to the discretion of the Member States to be set up on the basis of local needs and economic rationality as it requires extensive investments.</p> <p>As experience and knowledge regarding construction and operation of the quaternary treatment stage are currently weak both in Estonia and in other Member States, the requirement of quaternary treatment should progressively apply until 2050 with clear interim objectives.</p> |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | requirement of quaternary treatment should progressively apply until <b>2040 2050</b> with clear interim objectives.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p>(16) The evaluation has also shown that the wastewater treatment sector offers the opportunity to significantly reduce its own energy consumption and to produce renewable energy, for example by better use of the available surfaces in urban wastewater treatment plants for solar energy production or by producing biogas from sludge. The evaluation also illustrated that, without clear legal obligations, only partial progress can be expected in this sector. In this context, Member States should be required to ensure that the total annual energy used by all urban wastewater treatment plants on their national territory treating a load of 10 000 p.e. and above does not exceed the production of energy from renewable sources as defined in Article 2(1) of Directive (EU) 2018/2001 of the European Parliament and of the Council<sup>4</sup>, by those urban wastewater treatment plants. <b><u>In order to take into account the specificities of each urban wastewater treatment plant, optimise the investments needed and provide for the required flexibility to reach the abovementioned objective, while ensuring that the potential for renewable energy production and for energy savings is fully seized, the energy neutrality objective should be met at national level and not for each treatment plant. All renewable energies produced by the urban wastewater treatment plant or from the transformation of urban wastewater residues, whether on-site or off-site, such as hydraulic, solar, thermal, wind energy or biogas, should be taken into account. A maximum share of 25% of renewable energy, not directly linked to urban wastewater treatment activities, may be purchased or produced from external sources.</u></b> That objective should be progressively met with interim targets by 31 December 2040. Reaching this energy neutrality target will contribute to reduce the</p> | <p>(16) The evaluation has also shown that the wastewater treatment sector offers the opportunity to significantly reduce its own energy consumption and to produce renewable energy, for example by better use of the available surfaces in urban wastewater treatment plants for solar energy production or by producing biogas from sludge. The evaluation also illustrated that, without clear legal obligations, only partial progress can be expected in this sector. In this context, Member States should be required to ensure that the total annual energy used by all urban wastewater treatment plants on their national territory treating a load of 10 000 p.e. and above does not exceed the production of energy from renewable sources as defined in Article 2(1) of Directive (EU) 2018/2001 of the European Parliament and of the Council<sup>10</sup>, by those urban wastewater treatment plants. In order to take into account the specificities of each urban wastewater treatment plant, optimise the investments needed and provide for the required flexibility to reach the abovementioned objective, while ensuring that the potential for renewable energy production and for energy savings is fully seized, the energy neutrality objective should be met at national level and not for each treatment plant. All renewable energies produced by the urban wastewater treatment plant or from the transformation of urban wastewater residues, whether on-site or off-site, such as hydraulic, solar, thermal, wind energy or biogas, should be taken into account. A maximum share of <b>25% 50%</b> of <b>renewable carbon neutral</b> energy, not <b>directly</b> linked to urban wastewater treatment activities, may be purchased or produced from external sources. That objective should be progressively met with interim targets by 31 December <b>2040 2045</b>. Reaching this energy neutrality target will contribute to reduce the avoidable greenhouse gas (GHG) emissions from the</p> | <p>These changes are related to our compromise proposal on article 11 according to which the share of carbon neutral energy that is allowed to be purchased or produced from external sources not linked with urban wastewater treatment must be increased at least to 50% and the deadline extended at least to 2045 (the reasons are discussed in more detail below under Article 11 comments).</p> <p>We also believe that climate neutrality target can also be achieved with other carbon neutral energy sources (e.g nuclear energy, etc) in addition to energy from only renewable sources. Thus, the possibility to purchase renewable energy should be expanded and replaced by carbon neutral energy.</p> |

<sup>4</sup> Directive (EU) 2018/2001 of the European Parliament and of the Council of 11 December 2018 on the promotion of the use of energy from renewable sources (OJ L 328, 21.12.2018, p. 82).

<sup>10</sup> Directive (EU) 2018/2001 of the European Parliament and of the Council of 11 December 2018 on the promotion of the use of energy from renewable sources (OJ L 328, 21.12.2018, p. 82).

| <del>(18)</del> <b>(19 bis)</b> The water resources of the Union are increasingly under pressure, resulting in permanent or temporary water scarcity in some areas of the Union. The Union's ability to respond to the increasing pressures on water resources could be improved through a wider reuse of treated urban wastewater, limiting freshwater abstraction from surface and groundwater bodies. Therefore, the reuse of treated urban wastewater should be encouraged and applied whenever appropriate, whilst taking into account the need to ensure that the objectives of good ecological and chemical status of the receiving bodies, as defined in Directive 2000/60/EC, are met. The reinforcement of the requirements for the treatment of urban wastewater, and the actions to better monitor, track and reduce pollution at source, will have impacts on the quality of treated urban wastewater, and will therefore support water reuse. Where water reuse serves the purpose of agricultural irrigation, it should be carried out in accordance with Regulation (EU) 2020/741 of the European Parliament and of the Council <sup>16</sup> . |                                                                                                                                                                                                                                                                                                                                                                                                                | Making a separate recital for this content is suitable. |
| (28) The evaluation concluded that sludge management could be improved to better align it with the principles of the circular economy and of the waste hierarchy as defined in Article 4 of Directive 2008/98/EC. The actions to better monitor and reduce pollution at source from non-domestic discharges will help improving the quality of the sludge produced and ensure its safe use in agriculture. In order to ensure a proper and safe recovery of nutrients, including the critical substance phosphorus, from the sludge,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                | Text proposal is suitable.                              |

<sup>16</sup> Regulation (EU) 2020/741 of the European Parliament and of the Council of 25 May 2020 on minimum requirements for water reuse (OJ L 177, 5.6.2020, p. 32).

The monitoring frequencies should be aligned to the current best practices, as currently practiced in Switzerland. To remain cost-effective, those obligations <b>for the removal of micropollutants should be adapted considering the results of risk-assessment to the size of the urban wastewater treatment plants and of the agglomerations.</b> The monitoring will also contribute to provide data for the overall Environmental Monitoring Framework as set up under the 8<sup>th</sup> Environmental Action Programme, and more specifically feed the Zero Pollution Monitoring Framework underpinning it.</p> | <p>These changes are related to our previous proposal on Article 8.</p> |
| <p>(36) In order to ensure uniform conditions for the implementation of this Directive, implementing powers should be conferred on the Commission for the adoption of standards for the design of individual systems, for the adoption of monitoring and assessment methods for the indicators of the quaternary treatment, for the establishment of common conditions and criteria for the application of the exoneration for certain products from extended producer responsibility, for establishing methodologies to support the development of integrated urban wastewater management plans, <b>for the</b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>Text proposal is suitable.</p>                                       |

| (2); (3)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                   |                                                        |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                   |                                                        |
| 1. This Directive lays down rules on the collection, treatment, and discharge of urban wastewater, to protect the environment and human health while progressively <del>eliminating</del> <b>reducing</b> greenhouse gas emissions <del>to</del> <b>sustainable levels</b> and improving the energy balance of urban wastewater collection and treatment activities. It also lays down rules on access to sanitation, on transparency of the urban wastewater sector and on the regular surveillance of public health relevant parameters in urban wastewaters. |                   | The proposed change in wording is suitable in general. |

## ARTICLE 2 – DEFINITIONS

| (10 bis) [NEW] 'primary treatment' means treatment of urban wastewater by a physical and/or chemical process involving settlement of suspended solids, or other processes in which the BOD5 of the incoming wastewater is reduced by at least 20% before discharge and the total suspended solids of the incoming wastewater are reduced by at least 50%. |                                                                                                                                                                                                                                                                                                                      | The introduction of the definition of primary treatment from the current Directive is suitable. |
| (11) 'secondary treatment' means treatment of urban wastewater by a process generally involving biological treatment with a secondary settlement or another process which <del>reduces removes most of</del> biodegradable organic matter <del>in from</del> urban wastewater;                                                                            |                                                                                                                                                                                                                                                                                                                      | This definition is suitable.                                                                    |
| (12) 'tertiary treatment' means treatment of urban wastewater by a process which <del>reduces removes most of</del> by a process which removes nitrogen and/or phosphorus from the urban wastewaters;                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                      | This definition is suitable.                                                                    |
| (13) 'quaternary treatment' means treatment of urban wastewater by a process which <del>removes</del> reduces a broad spectrum of micropollutants <del>in from the</del> from urban wastewaters;                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                      | This definition is suitable.                                                                    |
| (14) 'sludge' means <del>any solid, semisolid, or liquid waste organic residue and inorganic sludge-residue</del> resulting from the treatment of urban wastewater in an urban wastewater treatment plant (excluding <del>debris, grit, grease, other debris</del> and any other screenings residues from the <del>first</del> pre-treatment step);       | (14) 'sludge' means <b>mainly organic and inorganic residue-biodegradable waste</b> resulting from the treatment of urban wastewater in an urban wastewater treatment plant (excluding grit, <b>grease, and</b> other debris, <b>grease</b> and any other residues from the <b>pre- preliminary</b> treatment step); | The scope of the new proposed 'sludge' definition is quite good but could be improved a bit.    |
| (15) 'eutrophication' means the enrichment of water by nutrients, especially compounds of nitrogen and/or phosphorus, causing an accelerated growth of algae and higher forms of plant life to produce an undesirable disturbance to the balance of organisms present in the water and to the quality of the water concerned;                             |                                                                                                                                                                                                                                                                                                                      |                                                                                                 |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                                                                         | Estonian proposal                                                                                                                                                                                                                                                                                                                                                                                                                                | Estonian comments                                                                                       |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|
| (16) 'micropollutant' means a substance, including its breakdown products, <del>that is usually present in the environment and urban wastewaters in low concentrations below milligrams per litre and</del> which can be considered hazardous to human health or the environment based on any of the <b>relevant</b> criteria set out in Part 3 and Part 4 of Annex I to Regulation EC <b>1272/2008</b> <sup>18</sup> ; | (16) 'micropollutant' means a substance, including its breakdown products, <b>that is usually present in the environment and urban wastewaters in very low concentrations, usually in micrograms per litre or below, and in low concentrations</b> which can be considered hazardous to human health or the environment based on any of the relevant criteria set out in Part 3 and Part 4 of Annex I to Regulation EC 1272/2008 <sup>19</sup> ; | We still believe that the definition of micropollutant should include a reference to the concentration. |
| (17) 'dilution ratio' means the ratio <del>of between the last five years average volume of annual flow of the receiving waters at the point of discharge and to the last five years average of the annual discharge volume of urban wastewater into surface waters; discharged from a treatment plant;</del>                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                  | This definition is suitable.                                                                            |
| (18) 'producer' means any manufacturer, importer or distributor that on a professional basis places products on the market of a Member State, including by means of distance contracts as defined in Article 2(7) of Directive 2011/83/EU means;                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                         |
| (19) 'Producer Responsibility Organisation' means <del>an</del> <b>nationally recognised</b> organisation established collectively by producers for the purpose of fulfilling their obligations under Article 9 <b>and 10</b> ;                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                  | This definition is suitable.                                                                            |
| (20) 'sanitation' means facilities and services for the safe disposal of human urine, faeces, and menstrual blood;                                                                                                                                                                                                                                                                                                      | (20) 'sanitation' means facilities and services <b>such as flush and dry toilets,</b> for the safe <b>management and disposal</b> of human urine, faeces, and menstrual blood, <b>among others</b> ;                                                                                                                                                                                                                                             | The scope of the new proposed 'sanitation' definition is quite good but could be improved a bit.        |

| <p>2. <del>Unless they justify a derogation under paragraph 1 of Article 4, By 31 December 2030 2033</del>, Member States shall ensure that <del>all</del> agglomerations <del>with a p.e. of</del> between 1000 and 2000 p.e. comply with the following requirements of paragraph 1 by 31 December 2033:</p> <p><del>(a) they are provided with collecting systems;</del></p> <p><del>(b) all their sources of domestic urban wastewater are connected to a the collecting system.</del></p> <p>Member states may derogate from this deadline for maximum six years, if the conditions in Article 23(5) are met.</p> | <p>2. Member States shall ensure that agglomerations between <del>1000</del> 1500 and 2000 p.e. comply with the requirements of paragraph 1 by 31 December <del>2033</del> 2040.</p> <p>Member states may derogate from this deadline for maximum six years, if the conditions in Article 23(5) are met.</p>                                                                                                                                                                                 | <p>We in general support the idea of applying risk-based approach, but we still consider it as a major problem that this Article 3 applies also to agglomerations between 1000 and 2000 p.e. We believe that the large-scale investments (more than 100 M€) for building sewerage (~120 km) to agglomerations between 1000 and 2000 p.e in the territories of smaller local governments (in addition, the residents of the local governments have to build pipelines inside their property to connect to the collecting system) would not be cost-effective and proportional to accompanying environmental benefits.</p> <p>Thus, we propose as a compromise to bring the widening of the scope of the Directive to 1500 p.e to better manage the investment needs (up to 40 M€, ~44 km sewerage) and to extend the deadline at least to 2040. This enables to exclude smaller agglomerations where deciding on environmental protection intervention is more reasonable at a Member State level by taking into account the environmental protection characteristics of the specific agglomeration. Deadline must be extended at least to 2040 as amending national legislation according to new requirements of the Directive, allocating financial resources (subsidies are still necessary), making the necessary investments (planning and building collecting systems) and connecting sources of urban wastewater to the constructed collecting systems will take more time than is expected in the Proposal.</p> |
| <p>3. The calculation of the load of an agglomeration expressed in p.e. shall be <del>based</del> <u>calculated</u> on the <del>basis of the maximum average weekly load entering the treatment plant generated in that agglomeration</del> during the year, excluding unusual situations such as those due to heavy rain. <del>The calculation of the load expressed in p.e. subject to treatment in an urban wastewater treatment plant</del>, shall also be based on the maximum average weekly load;</p>                                                                                                          | <p>3. The calculation of the load of an agglomeration expressed in p.e. shall be <u>based on calculated-on-the basis of</u> the maximum average weekly load <u>generated in that agglomeration entering the treatment plant</u> during the year, excluding unusual situations such as those due to heavy rain. <u>The calculation of the load expressed in p.e. subject to treatment in an urban wastewater treatment plant, shall also be based on the maximum average weekly load.</u></p> | <p>We do not support these changes in the calculation of the load of an agglomeration as, for example, there might not be WWTP in every agglomeration. By calculating the load of an agglomeration there should be taken into account the largest generated load in p.e. caused by wastewater arising in the agglomeration irrespective of whether it is discharged into a public sewerage system and thereby to urban wastewater treatment plant or not.</p> <p>We propose to reverse the wording of the calculation of the load of an agglomeration back to the version introduced by the SE Presidency.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <p>1. <del>By way of derogation from Article 3, where exceptionally if the establishment of or the connection to a collecting system is not justified either because it would produce no environmental or health benefit, it is not technically feasible or because it would involve excessive cost.</del></p> <p><b>If derogating from Article 3, Member States shall ensure that individual systems for the collection, storage and, when applicable, treatment of urban domestic urban wastewaters ('individual systems') are used for in agglomerations of 1 000 p.e. and above.</b></p> | <p>1. Member States may derogate from Article 3, if the establishment of or the connection to a collecting system is not justified either because it would produce no environmental or health benefit, it is not technically feasible or because it would involve excessive cost.</p> <p>If derogating from Article 3, Member States shall ensure that individual systems for the collection, storage and, when applicable, treatment of urban wastewaters ('individual systems') are used in agglomerations of <b>1 000 1500</b> p.e. and above.</p> | <p>Related to the Estonian new alternative text proposal/comments made on the previous Article 3, we find it important that this requirement would also not apply to agglomerations below 1500 p.e.</p>                                                                                                                                                                                                                                                                                                                                      |
| <p>2. Member States shall ensure that individual systems are designed, operated and maintained in a manner that <del>ensures at least achieves</del> the same level of <b>environmental protection treatment</b> as the secondary and tertiary treatments referred to in Articles 6 and 7. <del>Tertiary treatment for individual systems will only be required in those cases that individual systems are discharging in a sensitive area or a catchment area.</del></p> <p><del>This requirement will apply to existing individual systems six years after 2033.</del></p>                 | <p>2. Member States shall ensure that individual systems <b>for the treatment of urban wastewater</b> are designed, operated and maintained in a manner that achieves the same level of environmental protection as the secondary and, <b>when applicable</b>, tertiary treatments referred to in Articles 6 and 7. <b>Member States shall ensure that urban wastewater that is pumped out from a wastewater collection tank is subject to secondary and, when applicable, tertiary treatments referred to in Articles 6 and 7.</b></p>               | <p>As individual systems include individual wastewater treatment plants as well as collection tanks, we still believe that in this paragraph a clear distinction should be made between the requirements for individual wastewater treatment plants and collection tanks. Wastewater that is collected into a leak-proof wastewater collection tank and discharged into sewer discharge stations shall be subject to secondary and, when applicable, tertiary treatment (together with urban wastewater that enters collecting systems).</p> |
| <p>3. [NEW] Member States shall ensure that <b>individual systems that are used in</b> agglomerations of <b>1 000 p.e. and above</b>, <del>where individual systems are used</del> are registered in a <b>public national, or regional or local</b> registry and that regular inspections <b>or other means of regular checks or control</b> of those systems, <b>on the basis of a risk-based approach</b>, are carried out by the appropriate authority <b>or other body authorised at national, or regional or local level.</b></p>                                                       | <p>3. [NEW] Member States shall ensure that individual systems that are used in agglomerations of <b>1 000 1500</b> p.e. and above, are registered in a national, regional or local registry and that regular inspections or other means of regular checks or control of those systems, on the basis of a risk-based approach, are carried out by the appropriate authority or other body authorised at national, regional or local level.</p>                                                                                                        | <p>We in general are pleased with the changes made. However, related to the compromise Estonian text proposal/comments made on the previous Article 3, we find it important that this requirement would also not apply to agglomerations below 1500 p.e.</p>                                                                                                                                                                                                                                                                                 |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <p>1. By 31 December <del>2030</del> <b>2035</b>, Member States shall ensure that an integrated urban wastewater management plan is established for <b>each drainage area of</b> 24imples24g24tion of 100 000 p.e. and above.</p> | <p>1. By 31 December 2035, Member States shall ensure that an integrated urban wastewater management plan is established for <b>each drainage area of</b> agglomerations of 100 000 p.e. and above <b>or for their catchment areas</b>. <b>Member States shall have a right to decide whether an integrated urban wastewater management plan is established separately or jointly for agglomerations of 100 000 p.e. and above or for their catchment areas.</b></p> | <p>We believe that the requirement to prepare a separate integrated urban wastewater management plan for each drainage area of agglomerations would be unreasonable and too burdensome.</p> <p>We in general agree that with regard to collection and management of storm water, a catchment area-based approach is necessary to ensure a comprehensive solution to storm water problems (for example to reduce pollution caused by storm water through polluted discharges of urban runoff and sewer overflow). However, there should be clearly written that Member States shall have a flexibility to decide whether an integrated urban wastewater management plan is separately prepared for each agglomeration of 100 000 p.e. and above (or for its catchment area) or joint plans are prepared, for example, for several agglomerations or for their catchment areas. In our opinion it is not important that separate plans for each agglomeration or catchment area are prepared, the main thing is that all agglomerations or catchment areas that fall within the scope of this article are covered by the plan/plans.</p> |

| 3. By 31 December 2035 <b>2040</b> , Member States shall ensure that an integrated urban wastewater management plan is established for <u>each drainage area of</u> agglomerations referred to in paragraph 2 | 3. By 31 December 2040, Member States shall ensure that an integrated urban wastewater management plan is established for <b>each drainage area of</b> agglomerations referred to in paragraph 2 <b>or for their catchment areas. Member States shall have a right to decide whether an integrated urban wastewater management plan is established separately or jointly for agglomerations referred to in paragraph 2 or for their catchment areas.</b> | <p>As already mentioned under the comments of paragraph 1, we believe that the requirement to prepare a separate integrated urban wastewater management plan for each drainage area of agglomerations would be unreasonable and too burdensome.</p> <p>We in general agree that with regard to collection and management of storm water, a catchment area-based approach is necessary to ensure a comprehensive solution to storm water problems (for example to reduce pollution caused by storm water through polluted discharges of urban runoff and sewer overflow). However, there should be clearly written that Member States shall have a flexibility to decide whether an integrated urban wastewater management plan is separately prepared for each agglomeration (or for its catchment area) or joint plans are prepared, for example, for several agglomerations or for their catchment areas. In our opinion it is not important that separate plans for each agglomeration or catchment area are prepared, the main thing is that all agglomerations or catchment areas that fall within the scope of this article are covered by the plan/plans.</p> |

| 5. Integrated urban wastewater management plans shall include at least the elements set out in Annex V.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 6. The Commission is empowered to adopt implementing acts to:<br><br>(a) provide methodologies for the identification of the measures referred to in point 3 of Annex V;<br><br>(b) provide methodologies for the determination of alternative indicators to verify whether the indicative objective of pollution reduction referred to in point 2 (a) of Annex V is achieved;<br><br>© determine the format by which integrated urban wastewater management plans are to be made available to the Commission where requested in accordance with paragraph 4.<br><br>Those implementing acts shall be adopted in accordance with the examination procedure referred to in Article 28(2).<br><b>The Commission will provide the methodologies and formats by <u>24 months</u> from the entry into force of this Directive</b> . |                   | Text (including the deadline for the implementing acts) is suitable if the objective of pollution reduction in (b) is not mandatory as was confirmed by the Commission as fixed size for all overflows is not a reasonable solution, considering that achieving compliance with this criterion can be very costly, while the effect obtained from it is not very big (especially if the water quality of the receiving waters meets the criteria of good condition). Moreover, more precise criteria could be set for a specific overflow taking into account the local environmental condition of the specific receiving waters. |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <p>7. Member States shall ensure that integrated urban wastewater management plans are reviewed <b>at least</b> every <b>six 5</b> years after their establishment and updated where necessary.</p> | <p>7. Member States shall ensure that integrated urban wastewater management plans are reviewed at least every six years after their establishment and updated where necessary.</p> <p><b>8. [NEW] Member States can replace the obligation to establish separate integrated urban wastewater managements plans referred to in paragraph 1 and 3 with other nationally established plan(s) which include at least the same elements as it is set out for integrated urban wastewater management plans in Annex V.</b></p> | <p>We still find it necessary to add a new paragraph to Article 5. In Estonia there are several existing nationally established plans which match the scope of the integrated urban wastewater management plans and already include the same elements as it is set out in the Proposal for integrated urban wastewater management plans in Annex V. Thus, we do not see the need for the preparation and establishing new separate integrated urban wastewater managements plans. In order to optimize administrative burden we see the need that Member States should have an option to use other nationally prepared and established plans which include at least the same elements as it is set out for integrated urban wastewater management plans to 28imple this obligation.</p> |

## ARTICLE 6 – SECONDARY TREATMENT

| <p>1. Member States shall ensure that energy audits of urban wastewater treatment plants and collecting systems are carried out every four years. Those audits shall be carried out in accordance with Article 8 of Directive 2012/27/EU and include an identification of the potential for cost-effective <b>measures to reduce the use of energy and or enhance the</b> production of renewable energy, with a particular focus to identify and utilise the potential for biogas production, while reducing <b>greenhouse gas</b> methane emissions. The first audits shall be carried out:</p> <p>(a) by 31 December <del>2025</del> <b>2030</b> for urban wastewater treatment plants treating a load of 100 000 p.e. and above and the collecting systems connected to them;</p> <p>(b) by 31 December <del>2030</del> <b>2035</b> for urban wastewater treatment plants treating a load of between 10 000 p.e. and 100 000 p.e. and the collecting systems connected to them.</p> | <p>1. | <p>2. Member States shall ensure that, <u>at national level, urban wastewater treatment plants treating a load of 10 000 p.e. and above produce energy from renewable sources, the total annual energy from renewable sources, as defined in Article 2(1) of Directive (EU) 2018/2001, produced at national level, on or off-site, by urban wastewater treatment plants treating a load of 10 000 p.e. and above is equivalent to at least, based on the results of the audits referred to in paragraph 1.:</u></p> <p><u>This energy will be produced from urban wastewater resources, on or off-site. A maximum of 25% of energy may be produced or purchased from external renewable sources.</u></p> <p><u>Member States shall ensure that total annual energy from renewable sources produced by urban wastewater treatments plants or purchased under paragraphs 1 and 2 is equivalent to at least:</u></p> <p>(a) <del>50</del> <b>20</b> % of the total annual energy used by such plants by 31 December 2030;</p> <p>(b) <del>75</del> <b>60</b> % of the total annual energy used by such plants by 31 December 2035;</p> <p>© 100 % of the total annual energy used by such plants by 31 December 2040;</p> <p><u>In the calculation of the total annual energy produced from renewable sources as referred to in the first subparagraph, Member States may take into account a maximum of 10 % of renewable energy neither produced by urban wastewater treatment operators nor produced within a 5 kilometer radius from an urban wastewater treatment plants.</u></p> <p><u>Member States shall ensure that the potential for energy produced from urban wastewater resources, as demonstrated by the energy audit as referred in paragraph 1, is used to full extent, representing at least 80% of the energy used by urban wastewater treatment plants referred to in points (a), (b) and (c) of the first subparagraph.</u></p> | <p>2. Member States shall ensure that, at national level, urban wastewater treatment plants treating a load of 10 000 p.e. and above produce energy from renewable sources, as defined in Article 2(1) of Directive (EU) 2018/2001, based on the results of the audits referred to in paragraph 1.</p> <p>This energy will be produced from urban wastewater resources, on or off-site. A maximum of <b>25% 50%</b> of energy may be produced or purchased from external <b>carbon neutral energy renewable</b> sources <b>not related to urban wastewater treatment activities.</b></p> <p>Member States shall ensure that total annual energy from renewable sources produced by urban wastewater treatments plants or purchased under paragraphs 1 and 2 is equivalent to at least:</p> <p>(a) 20 % of the total annual energy used by such plants by 31 December <b>2030 2035</b>;</p> <p>(b) 60% of the total annual energy used by such plants by 31 December <b>2035 2040</b>;</p> <p>© 100 % of the total annual energy used by such plants by 31 December <b>2040 2045</b>.</p> | <p>We in general agree with the aim to move towards climate neutral energy in wastewater treatment sector but in Estonian context producing 75% of total annual energy from urban wastewater resources is not feasible and would require excessive investments. We see that there must be possible to purchase more than only 25% carbon-neutral electricity from the market as an alternative choice to self-production. As a compromise we make an alternative proposal that the share of carbon neutral energy that is allowed to be purchased or produced from external sources not linked with urban wastewater treatment must be increased at least to 50% and the deadline extended at least to 2045.</p> <p>As already described in the previous Estonian comments on this article 11, in Estonia it has been estimated that the potential of biogas produced from sludge is on average 20% of WWTPs' total electricity consumption. Remaining electricity consumption could be covered by installing solar power plants. However, the latter do not fit in the territories of all WWTPs and there is a need for establishing supporting grid and it puts artificial pressure for WWTPs to take market risks (for example price risk of overproduction). We in general believe that professional electricity producers are more effective and more sustainable. Thus, the share of carbon neutral energy that is allowed to be purchased or produced from external sources not linked with urban wastewater treatment must be increased at least to 50%. Deadline must also be extended at least by 5 years as making the necessary preparations and constructing the facilities need more time. Moreover, subsidies are needed for making the necessary investments.</p> <p>We also believe that climate neutrality target can also be achieved with other carbon neutral energy sources (e.g nuclear energy, etc) in addition to energy from only renewable sources. Thus, the possibility to purchase renewable energy should be expanded and replaced by carbon neutral energy.</p> |

## ARTICLE 13 – LOCAL CLIMATIC CONDITIONS

| <p>3. For all agglomerations of <del>above</del> 10 000 p.e. <b>and above</b>, Member States shall <b>ensure that competent authorities, appropriate bodies or the operator of the wastewater treatment plant</b> monitor, at the inlets and outlets of urban wastewater treatment plants, the concentration and loads in the urban wastewater of the following elements:</p> <p>(a) pollutants <b><u>that are expected to be found in urban wastewaters</u></b> listed in:</p> <p>(i) Annexes VIII and X to Directive 2000/60/EC, the Annex to Directive 2008/105/EC, Annex I to Directive 2006/118/EC and Part B of Annex II to Directive 2006/118/EC;</p> <p>(ii) the Annex to Decision 2455/2001/EC of the European Parliament and of the Council<sup>27</sup>;</p> <p>(iii) Annex II to Regulation (EC) No 166/2006 of the European Parliament and of the Council<sup>28</sup>;</p> <p>(iv) Annexes I and II to Directive 86/278/EEC.</p> <p>(b) parameters listed in Part B of Annex III to Directive (EU) 2020/2184, where urban wastewater is discharged in a catchment area referred to in Article 8 of that Directive;</p> <p>© the presence of microplastics.</p> <p><b><u>[NEW] Pollutants listed under points (a) and (b) may be excluded from the monitoring under this paragraph as long as it can be demonstrated, inter alia on the basis of monitoring results, that they are absent in urban wastewaters.</u></b></p> <p>For all agglomerations of above 10 000 p.e., Member States shall <b>ensure that competent authorities, appropriate bodies or the operator of the wastewater treatment plant</b> monitor the presence of micro-plastics in the sludge <b><u>when relevant and, notably, when it is reused in agriculture</u></b>.</p> <p><b><u>4.</u></b> The monitoring referred to in <del>the first and second sub</del> <b>this</b> paragraphs <b><u>3</u></b> shall be carried out with the following frequencies:</p> <p>(a) at least two samples per year, with maximum <del>6–7</del> months between the samples, for agglomerations of <del>100 000</del> <b><u>150.000</u></b> p.e. and <del>more</del> <b><u>above</u></b>;</p> | <p>3. For all agglomerations of 10 000 p.e. and above, Member States shall ensure that <b><u>competent authorities, appropriate bodies or</u></b> the operator of the wastewater treatment plant monitor, at the inlets and outlets of urban wastewater treatment plants, the concentration and loads in the urban wastewater of the following elements:</p> <p>(a) pollutants <b><u>that are expected to be found in urban wastewaters</u></b> listed in:</p> <p>(i) Annexes VIII and X to Directive 2000/60/EC, the Annex to Directive 2008/105/EC, Annex I to Directive 2006/118/EC and Part B of Annex II to Directive 2006/118/EC;</p> <p>(ii) the Annex to Decision 2455/2001/EC of the European Parliament and of the Council<sup>29</sup>;</p> <p>(iii) Annex II to Regulation (EC) No 166/2006 of the European Parliament and of the Council<sup>30</sup>;</p> <p>(iv) Annexes I and II to Directive 86/278/EEC.</p> <p>(b) parameters listed in Part B of Annex III to Directive (EU) 2020/2184, where urban wastewater is discharged in a catchment area referred to in Article 8 of that Directive.</p> <p><b><u>© the presence of microplastics.</u></b></p> <p><b><u>[NEW] The specific list of pollutants and parameters listed in (a) and (b) to be monitored in Member States will be decided at a national level on a basis of a risk assessment and/or on the basis of the results of national monitoring.</u></b></p> <p><b><u>[NEW] Pollutants listed under points (a) and (b) may be excluded from the monitoring under this paragraph as long as if it can be demonstrated, inter alia for instance on the basis of monitoring results, that they are absent in urban wastewaters or they may be contained in urban wastewater but are not considered at a national level as a risk to local water bodies or human health on the basis of, for example, national monitoring or risk assessment results.</u></b></p> <p>For all agglomerations of <del>above</del> 10 000 p.e. <b><u>and above</u></b>, Member States shall ensure that <b><u>competent authorities, appropriate bodies or</u></b> the operator of the wastewater treatment plant monitor the presence of micro-plastics <b><u>at the inlets and outlets of urban wastewater treatment</u></b></p> | <p>We believe that the costs associated with adding a large number of mandatory pollutants and parameters that require monitoring should not cause a significant economic burden and not be disproportionately high.</p> <p>We are pleased with this new addition according to which pollutants listed under points (a) and (b) may be excluded from the monitoring if it can be demonstrated that they are absent in urban wastewaters. However, we find that this paragraph needs more flexibility in a way that pollutants listed under points (a) and (b) may also be excluded from the monitoring if they are contained in urban wastewater but are not considered as a risk to local water bodies or human health on the basis of, for example, national monitoring or risk assessment results.</p> <p>It is not cost-effective and reasonable to monitor those pollutants that are not considered as a problem/risk to water bodies and/or human health at a national level or that are not even used in a Member State.</p> <p>The specific list of pollutants and parameters to be monitored should be decided at a national level. The competent authorities of the Member States should have the possibility to set the monitoring obligation for these pollutants and parameters for each specific wastewater treatment plant on a basis of a risk assessment or on the basis of the results of national monitoring.</p> <p>For example, Estonia is currently in the process of renewing national regulations on hazardous substances that are discharged into public sewage system as well as effluent limit values of hazardous substances. The list of pollutants that will be involved in these national regulations will be based on hazardous substances that are regulated in surface water bodies. Monitoring of the entire list of hazardous substances involved in national regulations will not be mandatory for all urban wastewater treatment plants, but the competent authorities will decide depending on the specific situation which substances exactly will be monitored in a specific urban wastewater treatment plant (this system has also functioned effectively in the current national regulations).</p> <p>Threshold in point (b) of paragraph four should be aligned with the changes made in point (a).</p> <p>As according to paragraph 5 the Commission will provide the methodologies for measuring greenhouse gas</p> |

Member States may include in their first national implementation programmes an extension of maximum six years of the following deadlines:</p> <p>(a) the deadlines referred to in Article 3(2) and/or in Article 6(2) on the conditions that:</p> <p>(i) less than 50 % of these agglomerations are provided with collecting systems and are not subject to secondary treatment on [OP please insert the date=day of entry into force of the Directive]; and</p> <p>(ii) the national implementation programme includes:</p> <ul style="list-style-type: none"> <li>- the number of agglomerations between <del>1 000</del> <b>1500</b> and 2 000 p.e. that lacks a collecting system and secondary treatment on [OP please insert the date=day of entry into force of the Directive]; and</li> <li>- a plan detailing the necessary investments to reach full compliance for these agglomerations within the extended deadlines;</li> </ul> <p>(b) the deadline for agglomerations referred to in Article 7(3) on the conditions that:</p> <p>(i) at least 50 % of these agglomerations are not applying tertiary treatment on [OP please insert the date=day of entry into force of the Directive]; and</p> <p>(ii) the national implementation programme includes:</p> <ul style="list-style-type: none"> <li>- the number of agglomerations referred to in Article 7(3) lacking tertiary treatment on [OP please insert the date=day of entry into force of the Directive]; and</li> <li>- a plan detailing the necessary investments to reach full compliance for these agglomerations within the extended deadlines;</li> </ul> <p>The extensions of these deadlines shall be effective only if the above-mentioned conditions are fulfilled. The Commission shall notify the Member States if these conditions are not fulfilled by [OP please insert the date=the last day of the sixth month after the deadline referred to in Article 23(2)].</p> | <p>The proposed replacement of the agglomeration load is related to our alternative proposal for the scope of the Directive. We believe that the large-scale investments (more than 100 M€) for building sewerage (~120 km) to agglomerations between 1000 and 2000 p.e in the territories of smaller local governments (in addition, the residents of the local governments have to build pipelines inside their property to connect to the collecting system) would not be cost-effective and proportional to accompanying environmental benefits. Thus, we propose as a compromise to bring the widening of the scope of the Directive to 1500 p.e to better manage the investment needs (up to 40 M€, ~44 km sewerage).</p> <p>We also believe that in smaller agglomerations it is more reasonable to leave the discretion on deciding environmental protection intervention to the Member States by taking into account the environmental protection characteristics of the specific agglomeration at national level.</p> |

| 1. Member States shall ensure that, where damage to human health has occurred as a result of a violation of national measures that were adopted pursuant to this Directive, the individuals affected have the right to claim and obtain compensation for that damage from the relevant natural or legal persons and, where appropriate, from the relevant competent authorities responsible for the violation.                                                                                                                        |                   | With regard to this article we support applying the same wording as in the general approach to the industrial emissions directive. |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                   |                                                                                                                                    |
| <del>2. Member States shall ensure that, as part of the public concerned, non-governmental organisations promoting the protection of human health or the environment and meeting any requirements under national law are allowed to represent the individuals affected and bring collective actions for compensation. Member States shall ensure that a claim for a violation leading to a damage cannot be pursued twice, by the individuals affected and by the non-governmental organisations referred to in this paragraph.</del> |                   |                                                                                                                                    |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                   |                                                                                                                                    |
| 3 2. Member States shall ensure that national rules and procedures relating to claims for compensation are designed and applied in such a way that they do not render impossible or excessively difficult the exercise of the right to compensation for damage caused by a violation pursuant to paragraph 1.                                                                                                                                                                                                                         |                   |                                                                                                                                    |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                   |                                                                                                                                    |

| 1. The power to adopt delegated acts is conferred on the Commission subject to the conditions laid down in this Article.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | With regard to this article we in general support applying the same wording as in the general approach to the industrial emissions directive.                                                                                                             |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                           |
| 2. The power to adopt delegated acts referred to in Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), and 24(3) shall be conferred on the Commission for a period of five years from [OP please insert the date = the date of entry into force of this Directive]. The Commission shall draw up a report in respect of the delegation of power not later than nine months before the end of the five-year period. The delegation of power shall be tacitly extended for periods of an identical duration unless the European Parliament or the Council opposes such extension not later than three months before the end of each period. | 2. The power to adopt delegated acts referred to in Articles <del>4(3)</del> , <del>7(4)</del> , <del>8(5)</del> , <del>9(2)</del> , 14(3), <del>20(2)</del> , and 24(3) shall be conferred on the Commission for a period of five years from [OP please insert the date = the date of entry into force of this Directive]. The Commission shall draw up a report in respect of the delegation of power not later than nine months before the end of the five-year period. The delegation of power shall be tacitly extended for periods of an identical duration unless the European Parliament or the Council opposes such extension not later than three months before the end of each period. | These changes are related to Estonian text proposals/ comments previously made on Article 4(3) (according to the new numeration Article 4(4)), Article 7(4), Article 8(5) (according to the new numeration Article 8(6)), Article 9(2) and Article 20(2). |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                           |
| 3. The delegation of power referred to in Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), and 24(3) may be revoked at any time by the European Parliament or by the Council. A decision to revoke shall put an end to the delegation of the power specified in that decision. It shall take effect the day following the publication of the decision in the Official Journal of the European Union or at a later date specified therein. It shall not affect the validity of any delegated acts already in force.                                                                                                                      | 3. The delegation of power referred to in Articles <del>4(3)</del> , <del>7(4)</del> , <del>8(5)</del> , <del>9(2)</del> , 14(3), <del>20(2)</del> , and 24(3) may be revoked at any time by the European Parliament or by the Council. A decision to revoke shall put an end to the delegation of the power specified in that decision. It shall take effect the day following the publication of the decision in the Official Journal of the European Union or at a later date specified therein. It shall not affect the validity of any delegated acts already in force.                                                                                                                      | These changes are related to Estonian text proposals/ comments previously made on Article 4(3) (according to the new numeration Article 4(4)), Article 7(4), Article 8(5) (according to the new numeration Article 8(6)), Article 9(2) and Article 20(2). |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                           |
| 4. Before adopting a delegated act, the Commission shall consult experts designated by each Member State in accordance with the principles laid down in the Interinstitutional Agreement of 13 April 2016 on Better Law-Making.                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                           |

| <p>1. By 31 December 2030 and by 31 December 2040, the Commission shall carry out an evaluation of this Directive based in particular on the following elements:</p> <p>(a) the experience gained through the implementation of this Directive;</p> <p>(b) the data sets referred to in Article 22(1);</p> <p>© relevant scientific, analytical and epidemiological data, including results from research projects funded by the Union;</p> <p>(d) WHO recommendations, where available;</p> <p>© an analyse of the possible need to adapt the list of products to be covered by extended producer responsibility to the evolution of the range of products placed on the market, improved knowledge on the presence of micropollutants in wastewaters and their impacts on public health and the environment, and data resulting from the new monitoring obligations on micropollutants in the inlets and outlets of the urban wastewater treatment plants.</p> <p>The Commission shall present a report on the main findings of the evaluation referred to in the first subparagraph to the European Parliament, the Council, the European Economic and Social Committee, and the Committee of the Regions.</p> | <p>1. By 31 December 2030 and by 31 December 2040, the Commission shall carry out an evaluation of this Directive based in particular on the following elements:</p> <p>(a) the experience gained through the implementation of this Directive;</p> <p>(b) the data sets referred to in Article 22(1);</p> <p>© relevant scientific, analytical and epidemiological data, including results from research projects funded by the Union;</p> <p>(d) WHO recommendations, where available;</p> <p>© <del>an analyse of the possible need to adapt the list of products to be covered by extended producer responsibility to the evolution of the range of products placed on the market,</del> improved knowledge on the presence of micropollutants in wastewaters and their impacts on public health and the environment, and data resulting from the new monitoring obligations on micropollutants in the inlets and outlets of the urban wastewater treatment plants.</p> <p>The Commission shall present a report on the main findings of the evaluation referred to in the first subparagraph to the European Parliament, the Council, the European Economic and Social Committee, and the Committee of the Regions.</p> | <p>With regard to deletion in ©, we find that Member States shall have a right to decide at a national level on implementation and extent of extended producer responsibility system taking into account local conditions (including product categories on which this system applies to).</p> |
| 2. Member States shall provide the Commission with the information necessary for the preparation of the report referred to in paragraph 1, second subparagraph.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                               |

## ARTICLE 31 – REVIEW

| <p>(b) a dynamic analysis of the flows of urban runoff, <b><u>polluted urban runoff</u></b> and urban wastewaters in case of rainfall based on the use of hydrological, hydraulic and water quality models that take into account state-of-the-art climate projections and including an estimate of the pollution loads <b>of the parameters referred to in Tables 1 and, where relevant, Table 2 of Annex I as well as microplastics and relevant micropollutants</b> released in receiving waters in case of rainfall;</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>(b) a dynamic analysis of the flows of <b>urban runoff</b>, polluted urban runoff and urban wastewaters in case of rainfall based on the use of hydrological, hydraulic and water quality models that take into account state-of-the-art climate projections and including an estimate of the pollution loads of the parameters referred to in Tables 1 and, where relevant, Table 2 of Annex I as well as microplastics and relevant micropollutants released in receiving waters in case of rainfall;</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <p>2. Objectives for the reduction of pollution from <del>storm-water sewer</del> overflows and <b><u>polluted discharges of urban runoff discharges</u></b>, including the following:</p> <p>(a) an <del>indicative</del> <b>indicative</b> objective that <del>storm-water sewer</del> overflow; represents <del>only no more than 1%</del> <b>a small percentage, preferably below one 2% percent</b>, of the annual collected urban wastewater load calculated in dry weather conditions;</p> <p>This <del>indicative target objective shall</del> <b>should</b> be met by:</p> <p>(i) 31 December <del>2035</del> <b>2040</b> for all agglomerations of 100 000 p.e. and above;</p> <p>(ii) 31 December <del>2040</del> <b>2045</b> for agglomerations of 10 000 p.e. <del>and above referred to and above identified in accordance with paragraph 2 of Article 5(2);</del></p> <p>(b) the progressive <b>reduction of pollution load from</b> <del>elimination of untreated discharges of urban runoff through separate sewer collection networks</del>, unless it can be demonstrated that those discharges do not cause adverse impacts on the <b>water quality requirements of other Union legislation of receiving waters;</b></p> | <p>2. Objectives for the reduction of pollution from sewer overflows and polluted discharges of urban runoff, including the following:</p> <p>(a) an indicative objective that sewer overflow represents only a small percentage, preferably below 2% percent, of the annual collected urban wastewater load calculated in dry weather <b>conditions-flow</b>;</p> <p>This <b>indicative</b> objective should be met by:</p> <p>(i) 31 December 2040 for all agglomerations of 100 000 p.e. and above;</p> <p>(ii) 31 December 2045 for agglomerations of 10 000 p.e. and above referred to of Article 5(2);</p> <p>(b) the progressive reduction of pollution load from discharges of urban runoff through separate sewers, unless it can be demonstrated that those discharges do not cause adverse impacts on the water quality requirements of other Union legislation;</p> <p>© the progressive reduction of macroplastics in sewer overflow and discharges of urban runoff.</p> | <p>Text is suitable if the objective of pollution reduction is not mandatory as was confirmed by the Commission as fixed size for all overflows is not a reasonable solution, considering that achieving compliance with this criterion can be very costly, while the effect obtained from it is not very big (especially if the water quality of the receiving waters meets the criteria of good condition). Moreover, more precise criteria could be set for a specific overflow taking into account the local environmental condition of the specific receiving waters.</p> <p>'Conditions' should be replaced with 'flow' in (a) for better consistency with the rest of the text.</p> |

| © <b>the progressive reduction of macroplastics in sewer overflow and discharges of urban runoff.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                   |                   |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                   |                   |
| 3. The measures to be taken to achieve the objectives referred to in point 2 accompanied with a clear identification of the actors involved and their responsibilities in the <del>implementation</del> <b>implementation</b> of the integrated plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                   |                   |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                   |                   |
| <p>4. When assessing which measures to be taken under point 3, Member States shall ensure that their competent authorities consider at least the following:</p> <p>(a) firstly, preventive measures aiming at avoiding the entry of unpolluted rain waters into collecting systems, including measures promoting natural water retention or rainwater harvesting, and measures increasing green spaces or limiting impermeable surfaces in the agglomerations;</p> <p>(b) secondly, measures to better manage and optimize the use of existing infrastructure including collecting systems, storage volumes, urban wastewater treatment plants with the aim to ensure that polluted rain waters are collected and treated, and releases of untreated urban wastewater into receiving waters are minimised;</p> <p>© finally, where necessary to achieve the objectives referred to in point 2, additional mitigation measures including the adaptation of the infrastructure for the collection, storage and treatment of urban wastewater or the creation of new infrastructures with a priority to green infrastructure such as vegetated ditches, treatment wetlands and storage ponds designed in order to support biodiversity. Where relevant, water reuse shall be considered in the context of the development of the integrated urban wastewater management plans referred to in Article 5.</p> |                   |                   |

| <i>Recitals amended:</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |             |             |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |             |             |
| <p>(2) Directive 91/271/EEC sets the legal framework for the collection, treatment and discharge of urban wastewater and the discharge of biodegradable wastewaters from certain industrial sectors. <b><u>Urban wastewaters can be formed by different mixtures of domestic wastewaters, urban runoff and non-domestic wastewater from other origins. Wastewater from institutions such as offices, schools, kitchens with food preparation, etc. which are predominantly originated from the human metabolism, qualifies as domestic wastewaters as well.</u></b> Its objective is to protect the environment from being adversely affected by insufficiently treated urban wastewater discharges. This Directive should continue to pursue the same objective, whilst also contributing to the protection of public health, when for instance urban wastewater is discharged in bathing waters or in water bodies used for the abstraction of drinking water, or when urban wastewater is used as an indicator for parameters relevant for public health. It should also improve access to sanitation and to key information related to the governance of the urban wastewater collection and treatment activities. Finally, this Directive should contribute to the progressive <del>elimination</del> <b>reduction</b> of greenhouse gas (GHG) emissions from urban wastewater collection and treatment activities, <del>notably by further reducing nitrogen emissions</del> but also by promoting energy efficiency and production of renewable energies, and thus should contribute to the 2050 objective of Climate</p> |             |             |

|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|-------------|
| <p>impervious and leak-proof, and that monitoring and inspection of the systems are carried out at regular and fixed intervals. <b><u>Where individual systems are used to collect and treat more than 2% of the urban wastewater load at national level from agglomerations of 2 000 p.e. and above, Member States should provide the Commission with justifications for the reasons for the use of individual systems instead of collecting systems, the level of compliance of those systems with established standards under this Directive and measures taken to reduce the use of such systems. The Commission should be empowered to adopt implementing acts to establish the format of the reporting and the level of details of the information to be provided by national authorities.</u></b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |             |
| <p>(7) During rainfall, storm water overflows and urban runoff represent a sizeable remaining source of pollution discharged into the environment. Those emissions are expected to increase due to the combined effects of urbanisation and progressive change of the rain regime linked with climate change. Solutions to reduce that source of pollution should be defined at local level taking into account the specific local conditions. They should be based on an integrated quantitative and qualitative water management in urban areas. Therefore, Member States should ensure that integrated urban wastewater management plans are established at local level for all agglomerations of 100 000 p.e. and above as those agglomerations are responsible for a significant share of the pollution emitted. Furthermore, integrated urban wastewater management plans should also be put in place for agglomeration of between 10 000 p.e. and 100 000 p.e. where storm water overflows or urban runoff poses a risk for the environment or public health. <b><u>In order to ensure an adequate coverage of the integrated management plans and a comprehensive solution to storm water problems, they should be established for each urban wastewater drainage area of the concerned agglomerations.</u></b></p> |                                                                                     |             |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | IE proposal                                                                         | IE comments |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|-------------|
| <p><b><u>(8 bis) In order to protect the environment, in particular the coastal and marine environment, and public health from being adversely affected by the discharge of insufficiently treated urban wastewater, secondary treatment should be applied to all discharges of urban wastewater from agglomerations of 1 000 p.e. and above. <b>Nevertheless enough time should be given to Member States to adapt their treatment infrastructures for agglomerations discharging their wastewaters into 'less sensitive areas' in coastal areas where 'appropriate treatment' is applied as defined in Council Directive 91/271/EEC. This adaptation time should be expanded in the case of Madeira due to the difficulty to install secondary treatment due to the specific geographical condition of the island.</b></u></b></p>                                                                                                                                                                                                                                   |  |             |
| <p>(11) Recent scientific knowledge underpinning several Commission strategies<sup>2</sup> highlight the need to take action to address the issue of micropollutants, which are now detected <b><u>usually</u></b> in all waters in the Union. Some of those micropollutants are hazardous for public health and the environment even in <del>small quantities</del> <b><u>low concentrations of micrograms per litre or below</u></b>. An additional treatment, i.e. quaternary treatment, should therefore be introduced in order to ensure that a large spectrum of micropollutants is removed from urban wastewater. Quaternary treatment should first focus on organic micropollutants, which represent a significant part of the pollution and for which removal technologies are already designed. The treatment should be imposed based on the precautionary approach combined with a risk-based approach. Therefore, all urban wastewater treatment plants of 100 000 p.e. and above should provide quaternary treatment, as those facilities represent a</p> |                                                                                     |             |

| <p>significant share of micropollutant discharges in the environment and the removal of micropollutants by urban wastewater treatment plants at such scale is cost-effective. For agglomerations of between 10 000 p.e. and 100 000 p.e., Member States should be required to apply quaternary treatment to areas identified as sensitive to pollution with micropollutants based on clear criteria, which should be specified. Such areas should include locations where treated urban wastewater discharge to water bodies result in low dilution ratios, or where the receiving water bodies are used for the production of drinking water or as bathing waters. In order to avoid the requirement of quaternary treatment for agglomerations of between 10 000 p.e. and 100 000 p.e., Member States should be required to demonstrate the absence of risks to the environment or to public health on the basis of a standardised risk assessment. In order to give Member States enough time to plan and deliver the necessary infrastructures, the requirement of quaternary treatment should progressively apply until 2040 with clear interim objectives.</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |             |
| <p>(16) The evaluation has also shown that the wastewater treatment sector offers the opportunity to significantly reduce its own energy consumption and to produce renewable energy, for example by better use of the available surfaces in urban wastewater treatment plants for solar energy production or by producing biogas from sludge. The evaluation also illustrated that, without clear legal obligations, only partial progress can be expected in this sector. In this context, Member States should be required to ensure that the total annual energy used by all urban wastewater treatment plants on their national territory treating a load of 10 000 p.e. and above does not exceed the production of energy from renewable sources as defined in Article 2(1) of Directive (EU) 2018/2001 of the European Parliament and of the Council<sup>3</sup>, by those urban wastewater treatment plants. <b><u>In order to take into</u></b></p>                                                                                                                                                                                                        | <p><b><u>In order to take into account the specificities of each urban wastewater treatment plant, optimise the investments needed and provide for the required flexibility to reach the abovementioned objective, while ensuring that the potential for renewable energy production and for energy savings is fully seized, the energy neutrality objective should be met at national level and not for each treatment plant. All renewable energies produced <del>by</del> at the urban wastewater operator's facilities or from the transformation of urban wastewater residues, whether on-site or off-site, such as hydraulic, solar, thermal, wind energy or biogas, should be taken into account. A maximum share of 25% of renewable energy, not directly linked</u></b></p> |             |

<sup>3</sup> Directive (EU) 2018/2001 of the European Parliament and of the Council of 11 December 2018 on the promotion of the use of energy from renewable sources (OJ L 328, 21.12.2018, p. 82).

| <p><u>account the specificities of each urban wastewater treatment plant, optimise the investments needed and provide for the required flexibility to reach the abovementioned objective, while ensuring that the potential for renewable energy production and for energy savings is fully seized, the energy neutrality objective should be met at national level and not for each treatment plant. All renewable energies produced by the urban wastewater treatment plant or from the transformation of urban wastewater residues, whether on-site or off-site, such as hydraulic, solar, thermal, wind energy or biogas, should be taken into account. A maximum share of 25% of renewable energy, not directly linked to urban wastewater treatment activities, may be purchased or produced from external sources.</u> That objective should be progressively met with interim targets by 31 December 2040. Reaching this energy neutrality target will contribute to reduce the avoidable greenhouse gas (GHG) emissions from the sector by 46 %, while supporting the achievement of the 2050 climate neutrality objectives and related national and Union objectives, such as the objectives set out in Regulation (EU) 2018/842 of the European Parliament and of the Council<sup>4</sup>. Encouraging EU-based biogas or solar energy production while enhancing energy efficiency measures in line with the Energy Efficiency First principle<sup>5</sup>, which means taking utmost account of cost-efficient energy efficiency measures in shaping energy policy and making relevant investment decisions, will also help reduce the Union energy dependence, one of the objectives expressed in the Commission "Repower EU" Plan<sup>6</sup>. It is also in line with Directive (EU) 2018/844 of the European</p> | <p><u>to urban wastewater treatment activities, may be purchased or produced from external sources.</u></p> |             |

<sup>4</sup> Regulation (EU) 2018/842 of the European Parliament and of the Council of 30 May 2018 on binding annual greenhouse gas emission reductions by Member States from 2021 to 2030 contributing to climate action to meet commitments under the Paris Agreement and amending Regulation (EU) No 525/2013 (OJ L 156, 19.6.2018, p. 26).

<sup>5</sup> Commission Recommendation (EU) 2021/1749 of 28 September 2021 on Energy Efficiency First: from principles to practice — Guidelines and examples for its implementation in decision-making in the energy sector and beyond.

| <p>to ensure that collecting systems and urban wastewater treatment plants are technically capable of receiving and treating the incoming pollution, the operators who manage urban wastewater treatment plants receiving non-domestic wastewater should be consulted before those permits are issued and should be able to consult the issued permits in order to be able to adapt their treatment processes. Where non-domestic pollution is identified in the incoming waters, Member States should take appropriate measures to reduce pollution at source, by enhancing the monitoring of pollutants in collecting systems so that the pollution sources can be identified and, where necessary, by reviewing the authorisations provided to relevant, connected urban wastewater treatment plants.</p>                                                                                                                                                                                                                                                                                                                                                         |  |             |
| <p><del>(18)</del> <b>(19 bis)</b> The water resources of the Union are increasingly under pressure, resulting in permanent or temporary water scarcity in some areas of the Union. The Union's ability to respond to the increasing pressures on water resources could be improved through a wider reuse of treated urban wastewater, limiting freshwater abstraction from surface and groundwater bodies. Therefore, the reuse of treated urban wastewater should be encouraged and applied whenever appropriate, whilst taking into account the need to ensure that the objectives of good ecological and chemical status of the receiving bodies, as defined in Directive 2000/60/EC, are met. The reinforcement of the requirements for the treatment of urban wastewater, and the actions to better monitor, track and reduce pollution at source, will have impacts on the quality of treated urban wastewater, and will therefore support water reuse. Where water reuse serves the purpose of agricultural irrigation, it should be carried out in accordance with Regulation (EU) 2020/741 of the European Parliament and of the Council <sup>9</sup>.</p> |                                                                                     |             |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                           |                           |
| 1. This Directive lays down rules on the collection, treatment, and discharge of urban wastewater, to protect the environment and human health while progressively <del>eliminating</del> <b>reducing</b> greenhouse gas emissions <b>to sustainable levels</b> and improving the energy balance of urban wastewater collection and treatment activities. It also lays down rules on access to sanitation, on transparency of the urban wastewater sector and on the regular surveillance of public health relevant parameters in urban wastewaters. |                           |                           |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                           |                           |
| For the purpose of this Directive, the following definitions apply:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                           |                           |
| (1) 'urban wastewater' means domestic wastewater <del>or, the mixture of domestic wastewater</del> <b>mixed with and either</b> non-domestic wastewater <del>and/or the mixture of domestic wastewater and</del> <b>with and</b> urban runoff, <del>or both of them;</del>                                                                                                                                                                                                                                                                                                                |                           |                           |
| (2) 'domestic wastewater' means wastewater from residential settlements, <del>and services</del> <b>and institutions</b> which originates predominantly from the human metabolism and/or from household activities;                                                                                                                                                                                                                                                                                                                                                                       |                           |                           |
| (3) ' non-domestic wastewater' means <del>any</del> wastewater, <b>other than domestic wastewater and urban runoff</b> , which is discharged <del>into collecting systems</del> from premises used for <del>either the following:</del><br>(a) the exercise of a trade;<br>(b) <del>activities carried out by an institution;</del><br>(c) <del>or industrial</del> <b>or economical</b> activities;<br><u><b>The wastewaters from the above activities, that are only domestic wastewater (from toilets or kitchens with food preparation) are entitled as domestic wastewaters.</b></u> |                           |                           |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                                                                                                                                       | [Insert MS name] proposal | [Insert MS name] comments |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|---------------------------|
| <p>(4) 'agglomeration' means an area where the <b>population (expressed in population equivalent), combined or not with and/or economic activities</b> pollution load of urban wastewater is sufficiently concentrated (<b>taking as a reference 10 p.e. per hectare or above</b>) for urban wastewater to be collected and conducted to <b>one or more</b> an urban wastewater treatment plants or to a <b>one or more</b> final discharge points, <b>into receiving waters</b>;</p> |                           |                           |
| <p>(5) 'urban runoff' means <b>precipitation rainwater</b> from agglomerations collected by combined or separate sewers;</p>                                                                                                                                                                                                                                                                                                                                                          |                           |                           |
| <p>(6) '<del>sewer storm water</del> overflow' means discharge of untreated urban wastewater <b>into</b> receiving waters from <b>separate or</b> combined sewers <del>caused by rainfall</del>;</p>                                                                                                                                                                                                                                                                                  |                           |                           |
| <p>(7) 'collecting system' means a system of conduits which collects and conducts urban wastewater;</p>                                                                                                                                                                                                                                                                                                                                                                               |                           |                           |
| <p>(8) 'combined sewer' means a <b>single</b> conduit <del>that that</del> <b>designed to</b> collects and conducts urban wastewater <b>including urban runoff</b>; <del>including urban runoff</del>;</p>                                                                                                                                                                                                                                                                            |                           |                           |
| <p>(9) 'separate sewer' means a <b>system of</b> conduits that separately collects and conducts <b>either urban runoff or either of the following</b>:</p> <p>(a) <del>domestic</del> <b>urban</b> wastewater <b>not including urban runoff</b>;</p> <p>(b) <del>non-domestic wastewater</del> <b>non-domestic wastewater</b>;</p> <p>(c) <del>a mixture of domestic and non-domestic wastewater</del>;</p> <p>(d) <del>rainwater from agglomerations</del>;</p>                      |                           |                           |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                            | [Insert MS name] proposal | [Insert MS name] comments |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|---------------------------|
| (10) <del>'1 population equivalent' or '(1 p.e.)' means the unit expressing the average potential water pollution load caused by one person per day, where 1 p.e. is the organic biodegradable load per day having a five-day biochemical oxygen demand (BOD5) of 60 g of oxygen per day per day;</del>                                                                    |                           |                           |
| (10 bis) [NEW] 'primary treatment' means treatment of urban wastewater by a physical and/or chemical process involving settlement of suspended solids, or other processes in which the BOD5 of the incoming wastewater is reduced by at least 20% before discharge and the total suspended solids of the incoming wastewater are reduced by at least 50%.                  |                           |                           |
| (11) 'secondary treatment' means treatment of urban wastewater by a process generally involving biological treatment with a secondary settlement or another process <del>which reduces removes most of biodegradable organic matter in from</del> urban wastewater;                                                                                                        |                           |                           |
| (12) 'tertiary treatment' means treatment of urban wastewater by a process which <del>reduces removes most of</del> by a process which removes nitrogen and/or phosphorus from the urban wastewaters;                                                                                                                                                                      |                           |                           |
| (13) 'quaternary treatment' means treatment of urban wastewater by a process which <del>removes</del> reduces a broad spectrum of micropollutants <del>in from the</del> from urban wastewaters;                                                                                                                                                                           |                           |                           |
| (14) 'sludge' means <del>any solid, semisolid, or liquid waste</del> organic residue and inorganic <del>sludge-residue</del> resulting from the treatment of urban wastewater in an urban wastewater treatment plant (excluding <del>debris</del> , grit, grease, <del>other debris</del> and any other screenings residues from the <del>first</del> pre-treatment step); |                           |                           |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                                                                         | [Insert MS name] proposal | [Insert MS name] comments |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|---------------------------|
| (15) 'eutrophication' means the enrichment of water by nutrients, especially compounds of nitrogen and/or phosphorus, causing an accelerated growth of algae and higher forms of plant life to produce an undesirable disturbance to the balance of organisms present in the water and to the quality of the water concerned;                                                                                           |                           |                           |
| (16) 'micropollutant' means a substance, including its breakdown products, <del>that is usually present in the environment and urban wastewaters in low concentrations below milligrams per litre and</del> which can be considered hazardous to human health or the environment based on any of the <b>relevant</b> criteria set out in Part 3 and Part 4 of Annex I to Regulation EC <b>1272/2008</b> <sup>11</sup> ; |                           |                           |
| (17) 'dilution ratio' means the ratio <del>of between the last five years average volume</del> of annual flow of the receiving waters at the point of discharge <del>and to the last five years average of the annual discharge volume of urban wastewater into surface waters; discharged from a treatment plant;</del>                                                                                                |                           |                           |
| (18) 'producer' means any manufacturer, importer or distributor that on a professional basis places products on the market of a Member State, including by means of distance contracts as defined in Article 2(7) of Directive 2011/83/EU means;                                                                                                                                                                        |                           |                           |
| (19) 'Producer Responsibility Organisation' means <del>an</del> <b>nationally recognised</b> organisation established collectively by producers for the purpose of fulfilling their obligations under Article 9 <b>and 10</b> ;                                                                                                                                                                                         |                           |                           |
| (20) 'sanitation' means facilities and services for the safe disposal of human urine, faeces, and menstrual blood;                                                                                                                                                                                                                                                                                                      |                           |                           |

<sup>11</sup> Regulation EC 1272/2008 of the European Parliament and of the Council on classification, labelling and packaging of substances and mixtures (OJ L 353 31.12.2008, p 1).

| <p>2. By 31 December <del>2025</del> <b>2027</b> <del>2030</del> Member States shall establish a list of agglomerations of between 10 000 p.e. and 100 000 p.e. where, considering historic data, <b>modelling</b> and state-of-the-art climate projections, one or more of the following conditions apply:</p> <p>(a) <del>sewer storm water</del> overflow or <b><u>polluted discharges of</u></b> urban runoff <del>discharges</del> poses a risk to the environment or human health;</p> <p>(b) <del>sewer storm water</del> overflow represents more than 4% <del>3%</del> of the annual collected urban wastewater load <b>of the parameters referred to in Tables 1 and, where relevant, Table 2 of Annex I</b>, calculated in dry weather <del>flow</del> conditions;</p> <p>(c) <del>sewer storm water</del> overflow or <b><u>polluted discharges of</u></b> urban runoff <del>discharges</del> prevents the fulfilment of any of the following:</p> <p>(i) the requirements established under Article 5 of Directive (EU) 2020/2184;</p> <p>(ii) the requirements set out in Article 5(3) of Directive 2006/7/EC of the European Parliament and of the Council<sup>12</sup>;</p> <p>(iii) the requirements set out in Article 3 of Directive 2008/105/EC of the European Parliament and of the Council<sup>13</sup>;</p> <p>(iv) the environmental objectives set out in Article 4 of Directive 2000/60/EC.</p> <p><b>(v) the requirements established under Article 3 of Directive 2006/118/EC<sup>14</sup></b></p> <p>Member States shall review the list referred to in the first subparagraph every <del>five</del> <b>six</b> years after its establishment and update it where necessary.</p> <p><b><u>Following an update of the list, Member States shall ensure that integrated management plans are established for agglomerations within six years of their inclusion in that list.</u></b></p> | <p>2. By 31 December <del>2025</del> <b>2027</b> <del>2030</del> Member States shall establish a list of agglomerations of between 10 000 p.e. and 100 000 p.e. where, considering historic data, <b>modelling</b> and state-of-the-art climate projections, one or more of the following conditions apply:</p> <p>(a) <del>sewer storm water</del> overflow <del>or polluted discharges of urban runoff discharges</del> poses a risk to the environment or human health;</p> <p>(b) <b>Domestic and non-domestic wastewater load spilled to the environment via sewer storm water</b> overflow represents more than 4% <del>3%</del> of the annual collected urban wastewater load <b>of the parameters referred to in Tables 1 and, where relevant, Table 2 of Annex I</b>, calculated in dry weather <del>flow</del> conditions;</p> <p>(c) <del>sewer storm water</del> overflow <del>or polluted discharges of urban runoff discharges</del> prevents the fulfilment of any of the following:</p> <p>(i) the requirements established under Article 5 of Directive (EU) 2020/2184;</p> <p>(ii) the requirements set out in Article 5(3) of Directive 2006/7/EC of the European Parliament and of the Council<sup>15</sup>;</p> <p>(iii) the requirements set out in Article 3 of Directive 2008/105/EC of the European Parliament and of the Council<sup>16</sup>;</p> <p>(iv) the environmental objectives set out in Article 4 of Directive 2000/60/EC.</p> <p><b>(v) the requirements established under Article 3 of Directive 2006/118/EC<sup>17</sup></b></p> <p>Member States shall review the list referred to in the first subparagraph every <del>five</del> <b>six</b> years after its establishment and update it where necessary.</p> <p><b><u>Following an update of the list, Member States shall ensure that integrated management plans are established for agglomerations within six years of their inclusion in that list.</u></b></p> | <p>We are concerned on the foreseen approach on urban runoff in the text proposals. Both the risk connected to sewer overflows and polluted urban runoff are addressed within the scope of article V and annex V at the same level. We consider the provisions under art 5 and annex V disproportionate for separate urban runoff systems taking in to account the in our view different environmental impact of both flows of pollution towards receiving waters.</p> <p>We propose a differentiated approach where the pollution in urban runoff and its management is addressed more proportionally to its risk and thus different from the approach taken for sewer overflows by which we lose a load of pollution that we aim to treat under this directive</p> |

| <p>1. Member States shall ensure that energy audits of urban wastewater treatment plants and collecting systems are carried out every four years. Those audits shall be carried out in accordance with Article 8 of Directive 2012/27/EU and include an identification of the potential for cost-effective <b>measures to reduce the use of energy and or enhance the</b> production of renewable energy, with a particular focus to identify and utilise the potential for biogas production, while reducing <b>greenhouse gas</b> methane emissions. The first audits shall be carried out:</p> <p>(a) by 31 December <del>2025</del> <b>2030</b> for urban wastewater treatment plants treating a load of 100 000 p.e. and above and the collecting systems connected to them;</p> <p>(b) by 31 December <del>2030</del> <b>2035</b> for urban wastewater treatment plants treating a load of between 10 000 p.e. and 100 000 p.e. and the collecting systems connected to them.</p> |             |             |

| Member States shall ensure that the urban wastewater treatment plants built to comply with the requirements set out in Articles 6, 7, and 8 are designed, constructed, operated and maintained to ensure sufficient performance under all normal local climatic conditions. When designing the plants, seasonal variations of the load shall be taken into account. |                           |                           |

## ARTICLE 14 – DISCHARGES OF NON-DOMESTIC WASTEWATER

| (22); (23)                                                                         |                           |                           |
|                                                                                    |                           |                           |

~~1. Member States shall monitor the presence of the following public health parameters in urban wastewater:~~

~~(a) SARS-CoV-2 virus and its variants;~~

~~(b) poliovirus;~~

~~(c) influenza virus;~~

~~(d) emerging pathogens;~~

~~(e) contaminants of emerging concern;~~

~~(f) any other public health parameters that are considered relevant by the competent authorities of the Member States for monitoring.~~

21. For the purpose of paragraph 1, Member States shall set up a national system for ~~permanent~~ cooperation and coordination between competent authorities responsible for public health and competent authorities responsible for urban wastewater treatment with regard to:

(a) the identification of ~~other~~ **relevant** public health parameters ~~than the ones referred to in paragraph 1~~ that are to be monitored **at least in the inlet of** urban wastewater **treatment plants**, such as those in the following list:

**(i) SARS-CoV-2 virus and its variants of interest;**

**(ii) poliovirus;**

**(iii) influenza virus;**

**(iv) emerging pathogens;**

**(v) contaminants of emerging concern;**

**(vi) (v) any other public health parameters that are considered relevant by the competent authorities of the Member States for monitoring;**

(b) the determination of the location and the frequency of urban wastewater sampling and analysis for each public health parameter identified in accordance with paragraph 1(a), ~~taking into account~~ **thus regarding** the available health data and the needs in terms of public health data and, where relevant, the local epidemiological situations;

(c) the organisation of an appropriate and timely communication of the monitoring results to the competent authorities responsible for public health and to Union

PUBLIC

|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>2. For all agglomerations of 10 000 p.e. and above, Member States shall ensure that competent authorities, <b>appropriate bodies or operators of the collecting system</b> monitor carry out <b>sufficient representative monitoring of sewer</b> the concentration and loads of pollutants from storm water overflows and <b>polluted discharges of</b> urban runoff discharged into water bodies in order to be able to model the concentration and loads of the parameters listed in Table 1 and 2 of Annex I as well as the content of microplastics and relevant micropollutants in these discharges.</p> | <p><del>2. For all agglomerations of 10 000 p.e. and above, Member States shall ensure that competent authorities, appropriate bodies or operators of the collecting system monitor carry out sufficient representative monitoring of sewer the concentration and loads of pollutants from storm water overflows and polluted discharges of urban runoff discharged into water bodies in order to be able to model the concentration and loads of the parameters listed in Table 1 and 2 of Annex I as well as the content of microplastics and relevant micropollutants in these discharges.</del></p> | <p>We consider a complete deletion of art 21(2) as appropriate:</p> <ul style="list-style-type: none"> <li>- Art 21(2), as written now, goes further than annex V. Annex V request an 'estimation' of the load of pollutants released in receiving waters by sewer overflows (and urban runoff) only in agglomeration that are selected to be at risk based on the risk evaluation performed under art. 5(2). Given the impact (both technological and financial), a requirement to model the concentrations and load of pollution for all sewer overflows in all agglomeration of 10.000 p.e. and above cannot be supported</li> <li>- Annex V already prescribes what is to be done with respect to monitoring / modelling to evaluate in more detail the actual risks and impact of sewer overflow on receiving waters.</li> <li>- For urban runoff in separate systems, we refer to the newly proposed approach – new 21 (3)</li> </ul> |

3. For all agglomerations of ~~above~~ 10 000 p.e. **and above**, Member States shall **ensure that competent authorities, appropriate bodies or the operator of the wastewater treatment plant** monitor, at the inlets and outlets of urban wastewater treatment plants, the concentration and loads in the urban wastewater of the following elements:

(a) pollutants **that are expected to be found in urban wastewaters** listed in:

(i) Annexes VIII and X to Directive 2000/60/EC, the Annex to Directive 2008/105/EC, Annex I to Directive 2006/118/EC and Part B of Annex II to Directive 2006/118/EC;

(ii) the Annex to Decision 2455/2001/EC of the European Parliament and of the Council<sup>22</sup>;

(iii) Annex II to Regulation (EC) No 166/2006 of the European Parliament and of the Council<sup>23</sup>;

(iv) Annexes I and II to Directive 86/278/EEC.

(b) parameters listed in Part B of Annex III to Directive (EU) 2020/2184, where urban wastewater is discharged in a catchment area referred to in Article 8 of that Directive;

(c) the presence of microplastics.

**[NEW] Pollutants listed under points (a) and (b) may be excluded from the monitoring under this paragraph as long as it can be demonstrated, inter alia on the basis of monitoring results, that they are absent in urban wastewaters.**

For all agglomerations of above 10 000 p.e., Member States shall **ensure that competent authorities, appropriate bodies or the operator of the wastewater treatment plant** monitor the presence of micro-plastics in the sludge **when relevant and, notably, when it is reused in agriculture**.

~~4.~~ The monitoring referred to in ~~the first and second sub~~ **this** paragraphs **3** shall be carried out with the following frequencies:

(a) at least two samples per year, with maximum ~~6-7~~ months between the samples, for agglomerations of ~~100 000~~ **150.000** p.e. and ~~more above~~;

PUBLIC

| 3. Member States shall update their national implementation programmes at least every <del>5</del> 6 years. They shall submit them to the Commission by 31 December, except where they can demonstrate that they are in compliance with Articles 3 to 8.                                                                                                                                                                   |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                            |                           |                           |
| 4. The Commission is empowered to adopt implementing acts establishing the methods and formats for submission of the national implementation programmes. Those implementing acts shall be adopted in accordance with the examination procedure referred to in Article 28(2) <b><u>no later than [OP please insert the date = the last day of the sixth month from the date of entry into force of this Directive].</u></b> |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                            |                           |                           |

5. Member States may include in their first national implementation programmes an extension of maximum six years of the following deadlines:

(a) the deadlines referred to in Article 3(2) and/or in Article 6(2) on the conditions that:

(i) less than 50 % of these agglomerations are provided with collecting systems and are not subject to secondary treatment on [OP please insert the date=day of entry into force of the Directive]; and

(ii) the national implementation programme includes:

- the number of agglomerations between 1 000 and 2 000 p.e. that lacks a collecting system and secondary treatment on [OP please insert the date=day of entry into force of the Directive]; and

- a plan detailing the necessary investments to reach full compliance for these agglomerations within the extended deadlines;

(b) the deadline for agglomerations referred to in Article 7(3) on the conditions that:

(i) at least 50 % of these agglomerations are not applying tertiary treatment on [OP please insert the date=day of entry into force of the Directive]; and

(ii) the national implementation programme includes:

- the number of agglomerations referred to in Article 7(3) lacking tertiary treatment on [OP please insert the date=day of entry into force of the Directive]; and

- a plan detailing the necessary investments to reach full compliance for these agglomerations within the extended deadlines;

The extensions of these deadlines shall be effective only if the above-mentioned conditions are fulfilled. The Commission shall notify the Member States if

| 1. The power to adopt delegated acts is conferred on the Commission subject to the conditions laid down in this Article.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |                           |
| 2. The power to adopt delegated acts referred to in Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), and 24(3) shall be conferred on the Commission for a period of five years from [OP please insert the date = the date of entry into force of this Directive]. The Commission shall draw up a report in respect of the delegation of power not later than nine months before the end of the five-year period. The delegation of power shall be tacitly extended for periods of an identical duration unless the European Parliament or the Council opposes such extension not later than three months before the end of each period. |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |                           |
| 3. The delegation of power referred to in Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), and 24(3) may be revoked at any time by the European Parliament or by the Council. A decision to revoke shall put an end to the delegation of the power specified in that decision. It shall take effect the day following the publication of the decision in the Official Journal of the European Union or at a later date specified therein. It shall not affect the validity of any delegated acts already in force.                                                                                                                      |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |                           |
| 4. Before adopting a delegated act, the Commission shall consult experts designated by each Member State in accordance with the principles laid down in the Interinstitutional Agreement of 13 April 2016 on Better Law-Making.                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |                           |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | [Insert MS name] proposal | [Insert MS name] comments |

| 5. As soon as it adopts a delegated act, the Commission shall notify it simultaneously to the European Parliament and to the Council.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |                           |
| 6. A delegated act adopted pursuant to Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), or 24(3) shall enter into force only if no objection has been expressed either by the European Parliament or by the Council within a period of two months of notification of that act to the European Parliament and the Council or if, before the expiry of that period, the European Parliament and the Council have both informed the Commission that they will not object. That period shall be extended by two months at the initiative of the European Parliament or of the Council. |                           |                           |

|                                                                                                                                                                                                                                                                                                                                                                                                     | <p>3. Monitoring requirements with regard to the potential presence of the substances listed in paragraphs 1 and 2 of article 21 in urban runoff discharged from separate urban runoff systems where urban runoff is expected to be polluted in such a way that its discharge into receiving waters can be considered as a risk to the environment or human health.</p> <p>The identification of relevant and feasible measures, taking in to account the cost-benefit principle, to reduce the pollution from urban runoff discharges based on the outcome of this monitoring.</p> <p>Where appropriate, these measures can be included in the programmes of measures referred to in Article 11 of the Directive 2000/60/EC.</p> | <p>We do recognize that separate systems of urban runoff can contain of significant load of pollution. We would therefore support the inclusion of an obligation for orientational focused monitoring on urban runoff water on the basis of wich measures to reduce the pollution from urban runoff discharges are identified.</p> <p>We make reference to the substances listed in paragraph 1 and 2 of article 21. If deemed relevant, an implementing act to identify a list the pollutants of concern linked to urban runoff, can be included here.</p> <p>We focus on the identification of measures to reduce pollution for urban runoff and make reference to the programme of measure under the water framework directive.</p> <p>Flexibility is needed on who will be the responsible party for taking the measures. It is not per definition the operator of the collecting system for urban runoff who will be made responsible. Therefor it should be an option for MS to include measure on separate urban runoff in the programmes of measures under the WFD.</p> |
| 3. The measures to be taken to achieve the objectives referred to in point 2 accompanied with a clear identification of the actors involved and their responsibilities in the <del>implementation</del> <b>implementation</b> of the integrated plan.                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <p>4. When assessing which measures to be taken under point 3, Member States shall ensure that their competent authorities consider at least the following:</p> <p>(a) firstly, preventive measures aiming at avoiding the entry of unpolluted rain waters into collecting systems, including measures promoting natural water retention or rainwater harvesting, and measures increasing green</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| <p>spaces or limiting impermeable surfaces in the agglomerations;</p> <p>(b) secondly, measures to better manage and optimize the use of existing infrastructure including collecting systems, storage volumes, urban wastewater treatment plants with the aim to ensure that polluted rain waters are collected and treated, and releases of untreated urban wastewater into receiving waters are minimised;</p> <p>(c) finally, where necessary to achieve the objectives referred to in point 2, additional mitigation measures including the adaptation of the infrastructure for the collection, storage and treatment of urban wastewater or the creation of new infrastructures with a priority to green infrastructure such as vegetated ditches, treatment wetlands and storage ponds designed in order to support biodiversity. Where relevant, water reuse shall be considered in the context of the development of the integrated urban wastewater management plans referred to in Article 5.</p> |  |                           |

## GREECE

### Comments on partial compromise text on Clusters 1, 3, 5, and related Annexes of Proposal Revision of the UWWT Directive 91/271/EEC (WK 10708/2023 INIT/29.8.2023)

A very important issue we want to emphasize regards climate change and the extraordinary, very adverse weather phenomena and natural disasters they cause. The new Directive should provide for and include in its text reference to these extraordinary weather conditions and the subsequent damage or total destruction of basic infrastructure.

Following the widespread catastrophic forest fires this summer, Greece is currently facing an extreme natural phenomenon. Unimaginable flooding in central Greece has caused an undefinable damage. Apart from the loss of human lives, livestock and agricultural land, many settlements and infrastructure have been destructed. The climate crisis does not only concern our country. Unfortunately, such phenomena are very likely to re-occur in any country. Such cases must be identified in the Directive and special care/derogations should be given to the Member States.

Regarding WPE meeting on 4 September, we share the comments of the Hellenic Authorities on the proposed changes for the clusters 1, 3 and 5 of Presidency compromise text of the Proposal for revision of the Directive 91/271/EEC. Greece reserves the right to come back with more comments at a later stage of the process on these articles and on the entire file as well.

## **Recitals**

Recital 8 bis: the following text has been added

*‘Nevertheless enough time should be given to Member States to adapt their treatment infrastructures for agglomerations discharging their wastewaters into ‘less sensitive areas’ in coastal areas where ‘appropriate treatment’ is applied as defined in Council Directive 91/271/EEC. This adaptation time should be expanded in the case of Madeira due to the difficulty to install secondary treatment due to the specific geographical condition of the island’.*

In Greece there is a large number of islands with specific conditions, not only geographical and geomorphological (e.g. with archaeological restrictions, etc) where the construction of central collecting system is very difficult. The same approach concerning the extension of the adaptation time should also be adopted in other cases, in this article and the whole text of the Directive.

We propose a general text without specific island reference:

*‘Nevertheless enough time should be given to Member States to adapt their treatment infrastructures for agglomerations discharging their wastewaters into ‘less sensitive areas’ in coastal areas where ‘appropriate treatment’ is applied as defined in Council Directive 91/271/EEC. This adaptation time should be expanded in cases of islands with difficulties to install secondary treatment due to specific conditions’.*

The level of treatment meant by the phrase which is acceptable in cases of agglomerations of between 2000 p.e. and 10000 p.e. discharging into coastal areas waters is very confusing. A definition for ‘appropriate treatment’ is necessary in order to define the level of treatment for the above agglomerations.

---

## Article 2 Definitions

We think that the definition of urban wastewater could be better amended to:

*‘Urban wastewater’ means domestic wastewater or domestic wastewater mixed with either non-domestic wastewater ~~and~~ or urban runoff or both of them’*

Moreover, we think that the addition of a definition (10 bis) for primary treatment is not necessary since this term does not appear anywhere in the text nor is there any provision for primary treatment.

On the other hand, as mentioned above, our view is that a definition for ‘appropriate treatment’ is necessary since it is mentioned both in recital 8 bis and article 6 and we believe that it is important to clarify its meaning.

Also definitions for sensitive and less sensitive areas should be added.

---

## Article 3 Collecting systems and calculation of the load expressed in p.e.

As pointed out in previous comments the extension of the scope to 1 000 p.e. for Member States with high fluctuations in seasonal population will lead to an increased number of new agglomerations. The threshold of 1000 p.e. is not justified and for this reason we propose 1500 p.e. instead, wherever it is mentioned in the Directive’s text. The deadline of 2033 for compliance still remains not feasible nor realistic and its expansion is proposed (e.g. 2040)

As we have already pointed out, as regards the title of the article and the addition of paragraph 3, our view is that at the point of recognition of requirements and planning, the load of the agglomeration expressed in p.e. can not be calculated but estimated, based on demographic and population data (permanent population, tourists and other non domestic activities). The load can be calculated more accurately when the operation of the projects begins and the operators can calculate the incoming load based on the actual data. Perhaps some clarifications or rephrase would be helpful here and detailed directions regarding the methodology to estimate the generated load of each agglomeration.

Moreover, the wording of paragraph 3 needs some amendment: ... *The calculation of the load of an agglomeration expressed in p.e. shall be calculated.*

---

## Article 4 Individual Systems

We proposed the deletion of the article 4.2

As already pointed out, we disagree with the obligations of 4.3 regarding the national registry and regular inspections of individual systems.

The article 4.5 must refer to agglomerations with more than 10000 p.e., as pointed out from other Member States. Moreover, the wording is confusing as it leaves the impression that the 2% refers to the sum of the individual systems in relation to the total load, but in the relevant comment it is mentioned that the justification and the threshold of 2% will have to apply for each agglomeration.

---

#### **Article 5 Integrated urban wastewater and urban runoff management plans**

We agree with the addition of the word 'polluted' for urban runoff, as in the previous wording urban runoff was 'included' in the term urban wastewater. Nevertheless, as we have already pointed out, we consider that the title and the requirements of the article should be limited to urban wastewater management plans without including polluted urban runoff.

Taking into consideration that the analysis of the RBMPs is at a river basin level, flexibility should be given to the Member States regarding the implementation of the Integrated Urban Wastewater Management Plans to use the same level, instead of establishing a plan for each agglomeration.

---

#### **Article 6 Secondary treatment**

At paragraph 6.2 the population of 1000 p.e. is too ambitious and the threshold of 1500 p.e. is proposed instead.

Moreover, the due date of 2033 to apply secondary treatment is very strict and practically not feasible for the new agglomerations that will be recognized by the application of this directive. Therefore, we propose that this date is amended at least to 2040.

---

#### **Article 11 Energy neutrality of urban wastewater treatment plants**

We express our concerns about the feasibility and applicability of Article 11 which is too ambitious. More realistic targets and the extension of the deadlines by at least 10 years should be set. Greater flexibility is required as there are particularities and difficulties in the existing infrastructure. For example, in Greece, the production of solar (photovoltaic facilities) and wind energy requires large surface areas that are usually not available on site. Because there may not be adequate space. The percentage of 25% of energy produced or purchased from external renewable sources must be increased.

---

#### **Article 17 Urban wastewater surveillance**

As already stated, the requirements of this article will create an additional burden to the already heavy requirements of the Directive. This article should be optional. It should have a more recommended character and not include mandatory surveillance requirements, to be decided at Member State level, based on the available recent scientific data and the prevailing conditions.

---

#### **Article 20 sludge and resource recovery**

We share the reservations and concerns of other Member States concerning the recovery of nutrients.

---

#### **Article 21 Monitoring**

The new monitoring requirements will lead to increased operating costs as well as increased administrative burden, especially for smaller agglomerations.

The list of parameters proposed in paragraph 3 for monitoring is large and includes all parameters and priority substances of Directive 2000/60/EC, microplastics etc. It is proposed that not all parameters are monitored but the which list results from the risk assessment. As stated in previous comments, the monitoring of substances is not necessary when it is proven that these substances are not detected.

It is again pointed out that it is very difficult to monitor urban runoff discharges.

Regarding paragraph 1c, it will be very difficult to measure the exact monthly quantities of reclaimed water used in agriculture. It is proposed to monitor only the quantities per year.

Finally, a general comment is that the requirements set by the new Directive must be feasible and applicable by all Member States, taking into account the particular conditions of each state (e.g. climate conditions, geomorphological relief, tourism, insularity, individual peculiarities, natural disasters, etc).

| <i>Recitals amended:</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                           |                                    |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                           |                                    |
| <p>(2) Directive 91/271/EEC sets the legal framework for the collection, treatment and discharge of urban wastewater and the discharge of biodegradable wastewaters from certain industrial sectors. <b><u>Urban wastewaters can be formed by different mixtures of domestic wastewaters, urban runoff and non-domestic wastewater from other origins. Wastewater from institutions such as offices, schools, kitchens with food preparation, etc. which are predominantly originated from the human metabolism, qualifies as domestic wastewaters as well.</u></b> Its objective is to protect the environment from being adversely affected by insufficiently treated urban wastewater discharges. This Directive should continue to pursue the same objective, whilst also contributing to the protection of public health, when for instance urban wastewater is discharged in bathing waters or in water bodies used for the abstraction of drinking water, or when urban wastewater is used as an indicator for parameters relevant for public health. It should also improve access to sanitation and to key information related to the governance of the urban wastewater collection and treatment activities. Finally, this Directive should contribute to the progressive <del>elimination</del> <b>reduction</b> of greenhouse gas (GHG) emissions from urban wastewater collection and treatment activities, <del>notably by further reducing nitrogen emissions</del> but also by promoting energy efficiency and production of renewable energies, and thus should contribute to the 2050 objective of Climate Neutrality established under Regulation (EU) 2021/1119 of the European Parliament and of the Council<sup>1</sup>.</p> |                           | We agree with the proposed changes |

<sup>1</sup> Regulation (EU) 2021/1119 of the European Parliament and of the Council of 30 June 2021 establishing the framework for achieving climate neutrality and amending Regulations (EC) No 401/2009 and (EU) 2018/1999 ('European Climate Law') (OJ L 243, 9.7.2021, p. 1).

| <p>(5) In order to ensure effective treatment of urban wastewater before discharge into the environment, all urban wastewaters from agglomerations of 1 000 p.e. and above should be collected in centralised collecting systems, <u>unless they justify a derogation for the use of individual systems under paragraph 1 of Article 4.</u> When delineating their agglomerations, Member States should take into account the <u>indicative</u> reference threshold of <u>10 to 25</u> p.e. per hectare above which the population, possibly combined with economic activities, located in a specific area are considered sufficiently concentrated. Where <del>centralised</del> <u>collecting</u> <del>such</del> systems are already in place, Member States should ensure that all sources of urban wastewater are connected to them.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Member States should take into account the <u>indicative</u> reference threshold of <u>10 to</u> 25 p.e. per hectare</p> | <p>We agree with the proposed changes and the introduction of the term "indicative".<br/>We ask to maintain only the 25 p.e. value</p> |
| <p>(6) <del>Exceptionally, where</del> <u>Where</u> it can be demonstrated that the establishment of a centralised urban wastewater collecting system would produce no environmental benefit, <u>would not be technically feasible</u>, or <u>would</u> involve excessive costs, Member States should be allowed to use individual systems to <u>collect and</u> treat urban wastewater, as long as they ensure the same level of <u>protection of the environment</u> <del>treatment as secondary and tertiary treatment</del>. For this purpose, Member States should establish national registers to identify individual systems used on their territory and take all necessary measures to ensure that the design of such systems is adequate, that the systems are properly maintained and that they are subject to a regular compliance control. In particular, Member States should ensure that individual systems used for the collection and storage of urban wastewater are impervious and leak-proof, and that monitoring and inspection of the systems are carried out at regular and fixed intervals. <u>Where individual systems are used to collect and treat more than 2% of the urban wastewater load at national level from agglomerations of 2 000 p.e. and above, Member States should provide the Commission with justifications for the reasons for the use of individual systems instead of collecting systems, the level of compliance of those systems with established standards under this Directive and</u></p> |                                                                                                                             | <p>We agree with the proposed changes, in particular with the sill of 2%</p>                                                           |

| <u>measures taken to reduce the use of such systems. The Commission should be empowered to adopt implementing acts to establish the format of the reporting and the level of details of the information to be provided by national authorities.</u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                           | We agree with the proposed changes concerning implementing acts |
| <p>(7) During rainfall, storm water overflows and urban runoff represent a sizeable remaining source of pollution discharged into the environment. Those emissions are expected to increase due to the combined effects of urbanisation and progressive change of the rain regime linked with climate change. Solutions to reduce that source of pollution should be defined at local level taking into account the specific local conditions. They should be based on an integrated quantitative and qualitative water management in urban areas. Therefore, Member States should ensure that integrated urban wastewater management plans are established at local level for all agglomerations of 100 000 p.e. and above as those agglomerations are responsible for a significant share of the pollution emitted. Furthermore, integrated urban wastewater management plans should also be put in place for agglomeration of between 10 000 p.e. and 100 000 p.e. where storm water overflows or urban runoff poses a risk for the environment or public health. <u>In order to ensure an adequate coverage of the integrated management plans and a comprehensive solution to storm water problems, they should be established for each urban wastewater drainage area of the concerned agglomerations.</u></p> |                           |                                                                 |
| <p><u>(8 bis)</u> In order to protect the environment, in particular the coastal and marine environment, and public health from being adversely affected by the discharge of insufficiently treated urban wastewater, secondary treatment should be applied to all discharges of urban wastewater from agglomerations of 1 000 p.e. and above. <u>Nevertheless enough time should be given to Member States to adapt their treatment infrastructures for agglomerations discharging their wastewaters into 'less sensitive areas' in coastal areas where 'appropriate treatment' is applied as defined in Council</u></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                           |                                                                 |

| <u><b>Directive 91/271/EEC. This adaptation time should be expanded in the case of Madeira due to the difficulty to install secondary treatment due to the specific geographical condition of the island.</b></u>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |                           |
| <p>(11) Recent scientific knowledge underpinning several Commission strategies<sup>2</sup> highlight the need to take action to address the issue of micropollutants, which are now detected <u>usually</u> in all waters in the Union. Some of those micropollutants are hazardous for public health and the environment even in <del>small quantities</del> <b>low concentrations of micrograms per litre or below</b>. An additional treatment, i.e. quaternary treatment, should therefore be introduced in order to ensure that a large spectrum of micropollutants is removed from urban wastewater. Quaternary treatment should first focus on organic micropollutants, which represent a significant part of the pollution and for which removal technologies are already designed. The treatment should be imposed based on the precautionary approach combined with a risk-based approach. Therefore, all urban wastewater treatment plants of 100 000 p.e. and above should provide quaternary treatment, as those facilities represent a significant share of micropollutant discharges in the environment and the removal of micropollutants by urban wastewater treatment plants at such scale is cost-effective. For agglomerations of between 10 000 p.e. and 100 000 p.e., Member States should be required to apply quaternary treatment to areas identified as sensitive to pollution with micropollutants based on clear criteria, which should be specified. Such areas should include locations where treated urban wastewater discharge to water bodies result in low dilution ratios, or where the receiving water bodies are used for the production of drinking water or as bathing waters. In order to avoid the requirement of</p> |                           |                           |

| <p>quaternary treatment for agglomerations of between 10 000 p.e. and 100 000 p.e., Member States should be required to demonstrate the absence of risks to the environment or to public health on the basis of a standardised risk assessment. In order to give Member States enough time to plan and deliver the necessary infrastructures, the requirement of quaternary treatment should progressively apply until 2040 with clear interim objectives.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |                                                                        |
| <p>(16) The evaluation has also shown that the wastewater treatment sector offers the opportunity to significantly reduce its own energy consumption and to produce renewable energy, for example by better use of the available surfaces in urban wastewater treatment plants for solar energy production or by producing biogas from sludge. The evaluation also illustrated that, without clear legal obligations, only partial progress can be expected in this sector. In this context, Member States should be required to ensure that the total annual energy used by all urban wastewater treatment plants on their national territory treating a load of 10 000 p.e. and above does not exceed the production of energy from renewable sources as defined in Article 2(1) of Directive (EU) 2018/2001 of the European Parliament and of the Council<sup>3</sup>, by those urban wastewater treatment plants. <b><u>In order to take into account the specificities of each urban wastewater treatment plant, optimise the investments needed and provide for the required flexibility to reach the abovementioned objective, while ensuring that the potential for renewable energy production and for energy savings is fully seized, the energy neutrality objective should be met at national level and not for each treatment plant. All renewable energies produced by the urban wastewater treatment plant or from the transformation of urban wastewater residues, whether on-site or off-site, such as hydraulic, solar, thermal, wind energy or biogas, should be taken into account.</u></b></p> |                                                                                     | <p>We agree with the proposed new text. obs: to align to art. 11.2</p> |

<sup>3</sup> Directive (EU) 2018/2001 of the European Parliament and of the Council of 11 December 2018 on the promotion of the use of energy from renewable sources (OJ L 328, 21.12.2018, p. 82).

| <p><b><u>A maximum share of 25% of renewable energy, not directly linked to urban wastewater treatment activities, may be purchased or produced from external sources.</u></b> That objective should be progressively met with interim targets by 31 December 2040. Reaching this energy neutrality target will contribute to reduce the avoidable greenhouse gas (GHG) emissions from the sector by 46 %, while supporting the achievement of the 2050 climate neutrality objectives and related national and Union objectives, such as the objectives set out in Regulation (EU) 2018/842 of the European Parliament and of the Council<sup>4</sup>. Encouraging EU-based biogas or solar energy production while enhancing energy efficiency measures in line with the Energy Efficiency First principle<sup>5</sup>, which means taking utmost account of cost-efficient energy efficiency measures in shaping energy policy and making relevant investment decisions, will also help reduce the Union energy dependence, one of the objectives expressed in the Commission "Repower EU" Plan<sup>6</sup>. It is also in line with Directive (EU) 2018/844 of the European Parliament and of the Council<sup>7</sup> and with Directive (EU) 2018/2001 in which urban wastewater treatment sites are qualified as 'go-to' areas for renewables, meaning a location designated as particularly suitable for the installation of plants for the production of energy from renewable sources. In order to reach the objective of energy neutrality via optimal measures for each urban wastewater treatment plant and for the collection system, Member States should ensure that energy audits are carried out in accordance with Article 8 of Directive 2012/27/EU of the European Parliament and of the</p> |  |                           |

<sup>4</sup> Regulation (EU) 2018/842 of the European Parliament and of the Council of 30 May 2018 on binding annual greenhouse gas emission reductions by Member States from 2021 to 2030 contributing to climate action to meet commitments under the Paris Agreement and amending Regulation (EU) No 525/2013 (OJ L 156, 19.6.2018, p. 26).

| <p>Council<sup>8</sup> every four years. Those audits should include an identification of the potential for cost-effective use or production of renewable energy following the criteria set out in Annex VI to Directive 2012/27/EU.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                           |                           |
| <p>(19) Urban wastewater treatment plants also receive non-domestic wastewater, including industrial wastewater, which can contain a range of pollutants not explicitly covered by Directive 91/271/EEC, such as heavy metals, microplastics, micropollutants and other chemicals. <b><u>This non-domestic wastewater may come from industries, or commercial establishments, or hospitals and other medical facilities, etc.</u></b> In most instances, there is a poor understanding and knowledge of such pollution which could deteriorate the functioning of the treatment process and contribute to the pollution of the receiving waters, but also prevent the recovery of sludge and the reuse of treated wastewater. Member States should therefore regularly monitor and report on such non-domestic pollution that enters the urban wastewater treatment plants and is discharged into water bodies. To prevent pollution from non-domestic wastewater discharges at source, releases from industries or enterprises connected to collecting systems should be subject to prior authorisation. In order to ensure that collecting systems and urban wastewater treatment plants are technically capable of receiving and treating the incoming pollution, the operators who manage urban wastewater treatment plants receiving non-domestic wastewater should be consulted before those permits are issued and should be able to consult the issued permits in order to be able to adapt their treatment processes. Where non-domestic pollution is identified in the incoming waters, Member States should take appropriate measures to reduce pollution at source, by enhancing the monitoring of pollutants in collecting systems so that the pollution sources can be identified and, where necessary, by</p> |                           |                           |

<sup>8</sup> Directive 2012/27/EU of the European Parliament and of the Council of 25 October 2012 on energy efficiency, amending Directives 2009/125/EC and 2010/30/EU and repealing Directives 2004/8/EC and 2006/32/EC (OJ L 315, 14.11.2012, p. 1).

| <p><del>(18)</del> <b>(19 bis)</b> The water resources of the Union are increasingly under pressure, resulting in permanent or temporary water scarcity in some areas of the Union. The Union's ability to respond to the increasing pressures on water resources could be improved through a wider reuse of treated urban wastewater, limiting freshwater abstraction from surface and groundwater bodies. Therefore, the reuse of treated urban wastewater should be encouraged and applied whenever appropriate, whilst taking into account the need to ensure that the objectives of good ecological and chemical status of the receiving bodies, as defined in Directive 2000/60/EC, are met. The reinforcement of the requirements for the treatment of urban wastewater, and the actions to better monitor, track and reduce pollution at source, will have impacts on the quality of treated urban wastewater, and will therefore support water reuse. Where water reuse serves the purpose of agricultural irrigation, it should be carried out in accordance with Regulation (EU) 2020/741 of the European Parliament and of the Council<sup>9</sup>.</p> |                           |                           |
| <p>(28) The evaluation concluded that sludge management could be improved to better align it with the principles of the circular economy and of the waste hierarchy as defined in Article 4 of Directive 2008/98/EC. The actions to better monitor and reduce pollution at source from non-domestic discharges will help improving the quality of the sludge produced and ensure its safe use in agriculture. In order to ensure a proper and safe recovery of nutrients, including the critical substance phosphorus, from the sludge, minimum recovery rates should be defined at Union level.<br/> <b><u>The recovered nutrients shall be used as substitutes for primary nutrients, for example, in the production of fertilizers.</u></b></p>                                                                                                                                                                                                                                                                                                                                                                                                                  |                           |                           |

<sup>9</sup> Regulation (EU) 2020/741 of the European Parliament and of the Council of 25 May 2020 on minimum requirements for water reuse (OJ L 177, 5.6.2020, p. 32).

| (2); (3)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                           |                                                                    |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                           |                                                                    |
| 1. This Directive lays down rules on the collection, treatment, and discharge of urban wastewater, to protect the environment and human health while progressively <del>eliminating</del> <b>reducing</b> greenhouse gas emissions <u>to sustainable levels</u> and improving the energy balance of urban wastewater collection and treatment activities. It also lays down rules on access to sanitation, on transparency of the urban wastewater sector and on the regular surveillance of public health relevant parameters in urban wastewaters. |                           | We support the modification with reference to “sustainable levels” |

## ARTICLE 2 - DEFINITIONS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                           |                                                                                                |
| (1) 'urban wastewater' means domestic wastewater <del>or, the mixture of domestic wastewater mixed with and either non-domestic wastewater and/or the mixture of domestic wastewater and</del> <b>with and</b> urban runoff, <b>or both of them</b> ;                                                                                                                                                                                                                                                                                                                 |                           | We agree with the proposed modification., in line with the Italian position expressed in July. |
| (2) 'domestic wastewater' means wastewater from residential settlements, <del>and services and institutions</del> which originates predominantly from the human metabolism and/or from household activities;                                                                                                                                                                                                                                                                                                                                                          |                           |                                                                                                |
| (3) ' non-domestic wastewater' means <del>any</del> wastewater, <b>other than domestic wastewater and urban runoff</b> , which is discharged into collecting systems from premises used for either the following:<br><br>(a) the exercise of a trade;<br>(b) <del>activities carried out by an institution</del> ;<br>(c) <del>or industrial or economical</del> activities;<br><br><u><b>The wastewaters from the above activities, that are only domestic wastewater (from toilets or kitchens with food preparation) are entitled as domestic wastewaters.</b></u> |                           | We agree with the proposed modification.,                                                      |
| (4) 'agglomeration' means an area where the <b>population (expressed in population equivalent), combined or not with and/or economic activities</b> <del>pollution load of urban wastewater is sufficiently concentrated (taking as a reference 10 p.e. per hectare or above)</del> for urban wastewater to be collected and conducted to <b>one or more</b> <del>an</del> urban wastewater treatment plants or to <b>a one or more</b> <del>final discharge points, into receiving waters</del> ;                                                                    |                           | We agree with the proposed modification.                                                       |
| (5) 'urban runoff' means <b>precipitation</b> <del>rainwater</del> from agglomerations collected by combined or separate sewers;                                                                                                                                                                                                                                                                                                                                                                                                                                      |                           |                                                                                                |

|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|-----------------------------------------------------------------------------------|
| (6) <del>'sewer storm water overflow'</del> means discharge of untreated urban wastewater <del>into</del> receiving waters from <b>separate or</b> combined sewers <del>caused by rainfall</del> ;                                                                                                                                                                                                                                      |                           |                                                                                   |
| (7) 'collecting system' means a system of conduits which collects and conducts urban wastewater;                                                                                                                                                                                                                                                                                                                                        |                           |                                                                                   |
| (8) 'combined sewer' means a <b>single</b> conduit <del>that that designed to</del> collects and conducts urban wastewater <b>including urban runoff</b> ; <del>including urban runoff</del> ;                                                                                                                                                                                                                                          |                           |                                                                                   |
| (9) 'separate sewer' means a <b>system of</b> conduits that separately collects and conducts <b>either urban runoff or either of the following</b> :<br><del>(a) domestic</del> <b>urban wastewater not including urban runoff</b> ;<br><del>(b) non-domestic wastewater</del> <b>non-domestic wastewater</b> ;<br><del>(c) a mixture of domestic and non-domestic wastewater</del> ;<br><del>(d) rainwater from agglomerations</del> ; |                           | We agree with the proposed modification, indicating two different types of sewers |
| (10) '1 population equivalent' or '(1 p.e.)' means <del>the unit expressing the average potential water pollution load caused by one person per day, where 1 p.e. is the organic biodegradable load per day having a five-day biochemical oxygen demand (BOD5) of 60 g of oxygen per day</del> <b>per day</b> ;                                                                                                                         |                           |                                                                                   |
| (10 bis) [NEW] 'primary treatment' means treatment of urban wastewater by a physical and/or chemical process involving settlement of suspended solids, or other processes in which the BOD5 of the incoming wastewater is reduced by at least 20% before discharge and the total suspended solids of the incoming wastewater are reduced by at least 50%.                                                                               |                           | We agree with the proposed modification                                           |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                    | [Insert MS name] proposal | [Insert MS name] comments               |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|-----------------------------------------|
| (11) 'secondary treatment' means treatment of urban wastewater by a process generally involving biological treatment with a secondary settlement or <b>another process which <u>reduces</u> <del>removes most of</del> biodegradable organic matter <del>in</del> <u>from</u> urban wastewater;</b>                                                |                           |                                         |
| (12) 'tertiary treatment' means treatment of urban wastewater by a process which <b><u>reduces</u> <del>removes most of</del> by a process which <del>removes</del> nitrogen and/or phosphorus from the urban wastewaters;</b>                                                                                                                     |                           |                                         |
| (13) 'quaternary treatment' means treatment of urban wastewater by a process which <b><del>removes</del> <u>reduces</u> a broad spectrum of micropollutants <del>in from the</del> <u>from</u> urban wastewaters;</b>                                                                                                                              |                           |                                         |
| (14) 'sludge' means <b><del>any solid, semisolid, or liquid waste organic residue and inorganic sludge residue</del> resulting from the treatment of urban wastewater <u>in an urban wastewater treatment plant (excluding debris, grit, grease, other debris and any other screenings residues from the <u>first</u> pre-treatment step)</u>;</b> |                           | We agree with the proposed modification |
| (15) 'eutrophication' means the enrichment of water by nutrients, especially compounds of nitrogen and/or phosphorus, causing an accelerated growth of algae and higher forms of plant life to produce an undesirable disturbance to the balance of organisms present in the water and to the quality of the water concerned;                      |                           |                                         |

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                                                                                                                         | [Insert MS name] proposal | [Insert MS name] comments |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|---------------------------|
| (16) 'micropollutant' means a substance, including its breakdown products, <del>that is usually present in the environment and urban wastewaters in low concentrations below milligrams per litre and</del> which can be considered hazardous to human health or the environment based on any of the <b>relevant</b> criteria set out in Part 3 and Part 4 of Annex I to Regulation EC <b>1272/2008</b> <sup>11</sup> ; |                           |                           |
| (17) 'dilution ratio' means the ratio <del>of between</del> the <b>last five years average volume</b> of annual flow of the receiving waters at the point of discharge <del>and to the last five years average of the</del> annual <b>discharge</b> volume of urban wastewater <b>into surface waters; discharged from a treatment plant;</b>                                                                           |                           |                           |
| (18) 'producer' means any manufacturer, importer or distributor that on a professional basis places products on the market of a Member State, including by means of distance contracts as defined in Article 2(7) of Directive 2011/83/EU means;                                                                                                                                                                        |                           |                           |
| (19) 'Producer Responsibility Organisation' means <del>an</del> <b>nationally recognised</b> organisation established collectively by producers for the purpose of fulfilling their obligations under Article 9 <b>and 10</b> ;                                                                                                                                                                                         |                           |                           |
| (20) 'sanitation' means facilities and services for the safe disposal of human urine, faeces, and menstrual blood;                                                                                                                                                                                                                                                                                                      |                           |                           |
| (21) 'antimicrobial resistance' means the ability of micro-organisms to survive or to grow in the presence of a concentration of an antimicrobial agent which is usually sufficient to inhibit or kill micro-organisms of the same species;                                                                                                                                                                             |                           |                           |

<sup>11</sup> Regulation EC 1272/2008 of the European Parliament and of the Council on classification, labelling and packaging of substances and mixtures (OJ L 353 31.12.2008, p 1).

| New text proposal_Clusters1,3,5                                                                                                                                                                                                                                                                                      | [Insert MS name] proposal | [Insert MS name] comments               |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|-----------------------------------------|
| (22) 'public concerned' means the public affected or likely to be affected by, or having an interest in, the decision-making procedures for the implementation of the obligations laid down in this Directive, including non-governmental organisations promoting the protection of human health or the environment; |                           |                                         |
| (23) 'plastic biomedica' means a plastic support used for the development of the bacteria needed for the treatment of urban wastewaters;                                                                                                                                                                             |                           |                                         |
| (24) 'placing on the market' means the first making available of a product on the market of a Member State                                                                                                                                                                                                           |                           |                                         |
| (25) <b>'load' means the amount of <u>organic biodegradable matter measured as BOD5</u> in urban wastewater, expressed in p.e., or any pollutant or nutrient in urban wastewater, expressed in p.e. or mass unit per time (usually kilogram per day or year).</b>                                                    |                           | We agree with the proposed modification |

### ARTICLE 3 – COLLECTING SYSTEMS AND CALCULATION OF THE LOAD EXPRESSED IN P.E

| New text proposal_Clusters1,3,5                                                                                                                                | [Insert MS name] proposal | [Insert MS name] comments |

| <p>1. Member States shall ensure that energy audits of urban wastewater treatment plants and collecting systems are carried out every four years. Those audits shall be carried out in accordance with Article 8 of Directive 2012/27/EU and include an identification of the potential for cost-effective <b>measures to reduce the use of energy and or enhance the</b> production of renewable energy, with a particular focus to identify and utilise the potential for biogas production, while reducing <b>greenhouse gas</b> methane emissions. The first audits shall be carried out:</p> <p>(a) by 31 December <del>2025</del> <b>2030</b> for urban wastewater treatment plants treating a load of 100 000 p.e. and above and the collecting systems connected to them;</p> <p>(b) by 31 December <del>2030</del> <b>2035</b> for urban wastewater treatment plants treating a load of between 10 000 p.e. and 100 000 p.e. and the collecting systems connected to them.</p> |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                           |                           |

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|------------------------------------------------|
| <p>2. For all agglomerations of 10 000 p.e. and above, Member States shall ensure that competent authorities, <b>appropriate bodies or operators of the collecting system</b> <del>monitor</del> <b>carry out sufficient representative monitoring of sewer</b> <del>the concentration and loads of pollutants from storm water overflows and</del> <b>polluted discharges of</b> urban runoff <del>discharged</del> into water bodies in order to be able to model the concentration and loads of the parameters listed in Table 1 and 2 of Annex I as well as the content of microplastics and relevant micropollutants in these discharges.</p> |  | <p>We agree with the proposed modification</p> |

3. For all agglomerations of ~~above~~ 10 000 p.e. **and above**, Member States shall **ensure that competent authorities, appropriate bodies or the operator of the wastewater treatment plant** monitor, at the inlets and outlets of urban wastewater treatment plants, the concentration and loads in the urban wastewater of the following elements:

(a) pollutants **that are expected to be found in urban wastewaters** listed in:

- (i) Annexes VIII and X to Directive 2000/60/EC, the Annex to Directive 2008/105/EC, Annex I to Directive 2006/118/EC and Part B of Annex II to Directive 2006/118/EC;
- (ii) the Annex to Decision 2455/2001/EC of the European Parliament and of the Council<sup>19</sup>;
- (iii) Annex II to Regulation (EC) No 166/2006 of the European Parliament and of the Council<sup>20</sup>;
- (iv) Annexes I and II to Directive 86/278/EEC.

(b) parameters listed in Part B of Annex III to Directive (EU) 2020/2184, where urban wastewater is discharged in a catchment area referred to in Article 8 of that Directive;

(c) the presence of microplastics.

**[NEW] Pollutants listed under points (a) and (b) may be excluded from the monitoring under this paragraph as long as it can be demonstrated, inter alia on the basis of monitoring results, that they are absent in urban wastewaters.**

For all agglomerations of above 10 000 p.e., Member States shall **ensure that competent authorities, appropriate bodies or the operator of the wastewater treatment plant** monitor the presence of micro-plastics in the sludge **when relevant and, notably, when it is reused in agriculture.**

**4.** The monitoring referred to in ~~the first and second sub~~  
**this** paragraphs **3** shall be carried out with the following  
frequencies:

(a) at least two samples per year, with maximum **6 7** months between the samples, for agglomerations of ~~100 000~~ **150.000** p.e. and ~~more above~~;

| 1. The power to adopt delegated acts is conferred on the Commission subject to the conditions laid down in this Article.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |                           |
| 2. The power to adopt delegated acts referred to in Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), and 24(3) shall be conferred on the Commission for a period of five years from [OP please insert the date = the date of entry into force of this Directive]. The Commission shall draw up a report in respect of the delegation of power not later than nine months before the end of the five-year period. The delegation of power shall be tacitly extended for periods of an identical duration unless the European Parliament or the Council opposes such extension not later than three months before the end of each period. |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |                           |
| 3. The delegation of power referred to in Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), and 24(3) may be revoked at any time by the European Parliament or by the Council. A decision to revoke shall put an end to the delegation of the power specified in that decision. It shall take effect the day following the publication of the decision in the Official Journal of the European Union or at a later date specified therein. It shall not affect the validity of any delegated acts already in force.                                                                                                                      |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |                           |
| 4. Before adopting a delegated act, the Commission shall consult experts designated by each Member State in accordance with the principles laid down in the Interinstitutional Agreement of 13 April 2016 on Better Law-Making.                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                           |                           |

| 5. As soon as it adopts a delegated act, the Commission shall notify it simultaneously to the European Parliament and to the Council.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                           |                           |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                           |                           |
| 6. A delegated act adopted pursuant to Articles 4(3), <del>6(3)</del> , 7(4), 8(5), 14(3), 20(2), or 24(3) shall enter into force only if no objection has been expressed either by the European Parliament or by the Council within a period of two months of notification of that act to the European Parliament and the Council or if, before the expiry of that period, the European Parliament and the Council have both informed the Commission that they will not object. That period shall be extended by two months at the initiative of the European Parliament or of the Council. |                           |                           |
