	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement
	critical. Given the key role of many such critical raw materials in realising the green and digital transitions, and in light of their use for defence and space applications, demand will increase exponentially in the coming decades. At the same time, the risk of supply disruptions is increasing against the background of rising geopolitical tensions and resource competition. Furthermore, if not managed properly, increased demand for critical raw materials could lead to negative environmental and social impacts. Considering these trends, it is necessary to take measures to ensure access to a secure and sustainable supply of critical raw materials to safeguard the Union's economic resilience and open strategic autonomy.	concentration of supply from a few third countries, are considered critical. Given the key role of many such critical raw materials in realising the green and digital transitions, in line with the European Green Deal , and in light of their use for defence and ~~space~~ aerospace applications, demand will increase exponentially in the coming decades, and it is therefore necessary to implement measures to mitigate it and protect the Union from the rising gap between supply and demand at global level. Further raw materials used in other sectors such as agriculture, health or construction, might be exposed to high supply risks in the future. At the same time, the risk of supply disruptions is increasing against the background of rising geopolitical tensions and resource competition. Furthermore, if not managed properly, increased demand for critical raw materials could lead to negative environmental and social impacts. Considering these trends, it is necessary to take measures to ensure access to a secure and sustainable supply of critical raw materials through mitigating the increase in demand, fostering substitution and increases in efficiency to reduce the criticality of the expected exponential growth	critical. Given the key role of many such critical raw materials in realising the green and digital transitions, and in light of their use for defence and space applications, demand will increase exponentially in the coming decades. At the same time, the risk of supply disruptions is increasing against the background of rising geopolitical tensions and resource competition. Furthermore, if not managed properly, increased demand for critical raw materials could lead to negative environmental and social impacts. ~~Considering these trends, it is necessary to take measures to ensure access to a secure and sustainable supply of critical raw materials to safeguard the Union's economic resilience and open strategic autonomy.~~	

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement
		in demand in the Union, in order to safeguard the Union's economic resilience and open strategic autonomy.		
Recital 1a				
10a		(1a) In addition to growing demand of primary and secondary raw materials, there is a growing demand for skilled workers. The shortage of skilled workers in the Union is already at a critical stage, also in the raw materials sector, which will require an additional 1,2 million skilled workers by 2030 in the e-mobility and renewables sector alone. The Union should therefore support Member States in providing training and skills and consider concrete actions at Union level, such as the establishment of a European raw materials academy to provide talents to the raw and advanced materials sectors, and to reskill and upskill the existing workforce.		
Recital 1b				
10b		(1b) The security situation in Europe and around the globe requires urgent reflection on how to strengthen supply chain resilience, including in the defence		

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement
		sector.		
Recital 1a				
10c			(1a) Given the complexity and the transnational character of critical raw material value chains, uncoordinated national measures to ensure a secure and sustainable supply of critical raw materials risk undermining the functioning of the internal market. Critical raw materials are often extracted in specific countries or regions, depending on the geographical distribution of relevant reserves, transported for further processing elsewhere and then sold across the internal market for use in relevant products. At the processing stage in particular, critical raw materials are often imported and exported several times within the internal market before use in a final application. Similarly, recycling of relevant products at end of life with a view to the recovery of critical raw materials may take place in a different country or region than where relevant waste is collected, and the resulting secondary materials are likely to be further transported for further processing and use. In addition, critical raw materials are needed at the beginning of many	

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement
			industrial value chains and are often indispensable inputs for a wide set of strategic sectors including renewable energy, the digital industry, and the space and defence sectors. They therefore play an essential role in underpinning economic activities in the internal market and disruptions in their supply could have a significant cross-border impact between Member States.	
Recital 1b				
10d			(1b) Against this background, uncoordinated actions by Member States risks distorting competition and fragmenting the internal market, for example by imposing diverging regulation for market operators, providing different levels of access to supply risk monitoring, providing different levels of support to national projects, or by creating obstacles to cross-border trade between Member States in critical raw materials or related goods thus creating obstacles to the proper functioning of the internal market. In addition, individual actions of Member States may not be sufficient to effectively prevent supply disruptions of critical raw materials from taking place or	

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement
			may be less efficient in achieving that aim.	
Recital 2				
11	(2) Given the complexity and the transnational character of critical raw material value chains, uncoordinated national measures to ensure a secure and sustainable supply of critical raw materials have a high potential of distorting competition and fragmenting the internal market. Therefore, to safeguard the functioning of the internal market, a common Union framework should be created to collectively address this central challenge.	(2) Given the complexity and the transnational character of critical raw material value chains, uncoordinated national measures to ensure a secure and sustainable supply of critical raw materials have a high potential of distorting competition and fragmenting the internal market. Therefore, to safeguard the functioning of the internal market, a common Union framework should be created to collectively address this central challenge in a fair and equitable manner, in full compliance with applicable Union competition and State aid rules.	(2) Given the complexity and the transnational character of critical raw material value chains, uncoordinated national measures Therefore, to safeguard the functioning of the internal market, a common Union framework should be created to ensure access to a secure and sustainable supply of critical raw materials ~~have a high potential of distorting competition and fragmenting the internal market.~~ Therefore, to safeguard the functioning of the internal market, a common Union framework should be created to collectively address this central challenge's economic resilience and open strategic autonomy.	
Recital 3				
12	(3) Firstly, in order to effectively ensure the Union's access to a secure and sustainable supply of critical raw materials, that framework should include measures to decrease the Union's growing supply risks by strengthening Union capacities along	(3) Firstly, in order to effectively ensure the Union's access to a secure and sustainable supply of critical raw materials, that framework should include measures to decrease the Union's growing supply risks by strengthening Union capacities along	(3) Firstly, ~~in order to effectively ensure the Union's access to a secure and sustainable supply of critical~~ framework should define those raw materials, ~~that framework should include measures to decrease~~ that are considered strategic and

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement
	value chain, while aiming to achieve overall capacity benchmarks for extraction, processing and recycling of strategic raw materials. Firstly, the Union should increase the use of its own geological resources of strategic raw materials and build up capacity to allow it to extract the materials needed to produce at least 10 % of the Union's consumption of strategic raw materials. Keeping in mind that extraction capacity is highly dependent on the availability of Union geological resources, the achievement of this benchmark is dependent on such availability. Secondly, in order to build a full value chain and prevent any bottlenecks at intermediate stages, the Union should in addition increase its processing capacity along the value chain and be able to produce at least 40 % of its annual consumption of strategic raw materials. Thirdly, it is expected that in the coming decades a growing share of the Union's consumption of strategic raw materials can be covered by secondary raw materials, which would improve both the security and the sustainability of the Union's raw materials supply. Therefore, Union recycling capacity should be able to produce at least 15 % of the Union's annual consumption of strategic raw materials. These benchmarks refer to	value chain, while aiming to achieve overall capacity benchmarks for extraction, processing and recycling of strategic raw materials. Firstly, the Union should increase the use of its own geological resources of strategic raw materials and build up capacity to allow it to extract the materials needed to produce at least 10 % of the Union's consumption of strategic raw materials. Keeping in mind that extraction capacity is highly dependent on the availability of Union geological resources, the achievement of this benchmark is dependent on such availability. Secondly, in order to build a full value chain and prevent any bottlenecks at intermediate stages, the Union should in addition increase its processing capacity along the value chain and be able to produce at least 40 % of its annual consumption of strategic raw materials. Furthermore, a part of the Union's new processing capacity might be developed under strategic partnerships in the Union lead strategic projects of mutual benefit in third countries, in particular in developing countries and emerging markets. Thirdly, it is expected that in the coming decades a growing share of the Union's consumption of strategic raw materials can be covered by secondary raw materials, which	capacities and diversification of supply. Such benchmarks should help to guide efforts to strengthen Union capacities along all stages of the strategic raw materials value chain, ~~benchmarks should be set to guide efforts and track progress~~including extraction, processing and recycling, and increase the diversification of external supplies of strategic raw materials. The aim should be to increase capacities for each strategic raw material at each stage of the value chain, while aiming to achieve overall capacity benchmarks at Union level for extraction, processing and recycling of strategic raw materials. Firstly, the Union should increase the use of its own geological resources of strategic raw materials and build up capacity to allow it to extract the materials needed to produce at least 10 % of the Union's consumption of strategic raw materials. Keeping in mind that extraction capacity is highly dependent on the availability of Union geological resources, the achievement of this benchmark is dependent on such availability. Secondly, in order to build a full value chain and prevent any bottlenecks at intermediate stages, the Union should in addition increase its processing capacity along the value chain and be able to	

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement
	the 2030 time horizon, in alignment with the Union's climate and energy targets set under Regulation (EU) 2021/1119 of the European Parliament and of the Council¹ and the digital targets under the Digital Decade², which they underpin. Furthermore, quality jobs, including skills development and job-to-job transitions, will address risks in the sectoral labour market and help ensure the EU's competitiveness. 1. Regulation (EU) 2021/1119 of the European Parliament and of the Council of 30 June 2021 establishing the framework for achieving climate neutrality and amending Regulations (EC) No 401/2009 and (EU) 2018/1999 (OJ L 243, 9.7.2021, p. 1). 2. Decision (EU) 2022/2481 of the European Parliament and of the Council of 14 December 2022 establishing the Digital Decade Policy Programme 2030 (OJL 323, 19.12.2022, p. 4–26)	would improve both the security and the sustainability of the Union's raw materials supply. Therefore, Union recycling capacity should be able to produce at least ~~15 % of the Union's annual consumption of~~ +10% volume of recycling capacity based on the 2020-2022 baseline for each strategic raw material to at least collect, sort and process 45% of each strategic raw material contained in the Union's waste taking into account technical and economic feasibility. These benchmarks refer to the 2030 time horizon, in alignment with the Union's climate and energy targets set under Regulation (EU) 2021/1119 of the European Parliament and of the Council¹– and the digital targets under the Digital Decade², which they underpin. Furthermore, quality jobs, including skills development and job-to-job transitions, will address risks in the sectoral labour market and help ensure the EU's competitiveness. Within that assessment, flexibility is needed to consider the unique specifications of the raw material in question, including material properties and challenges along the value chain. It should also aim to support existing capacities. 1. [1] Regulation (EU) 2021/1119 of the European Parliament and of the Council	produce at least ~~40 %~~ 50% of its annual consumption of strategic raw materials. Thirdly, it is expected that in the coming decades a growing share of the Union's consumption of strategic raw materials can be covered by secondary raw materials, which would improve both the security and the sustainability of the Union's raw materials supply. Therefore, Union recycling capacity should be able to produce at least ~~15 %~~ 20% of the Union's annual consumption of strategic raw materials. Accompanying efforts to improve resource efficiency through research and innovation, substitution, awareness-raising and other relevant measures will also facilitate the attainment of these benchmarks. These benchmarks refer to the 2030 time horizon, in alignment with the Union's climate and energy targets set under Regulation (EU) 2021/1119 of the European Parliament and of the Council¹– and the digital targets under the Digital Decade², which they underpin. Furthermore, quality jobs, including skills development and job-to-job transitions, will address risks in the sectoral labour market and help ensure the EU's competitiveness. Pursuant to [Article 5(4)(a)(i) of the Ecodesign For Sustainable Products Regulation] the

Today, however, recycling and re-use rates of most critical raw materials are low, including due to a lack of consideration of recyclability at the design phase of products, and recycling systems and technologies are often not adapted to the specificities of these raw materials. Action addressing the different factors holding back the circularity potential is thus required. Regardless of the amount of strategic raw materials consumed in 2030, the Union should aim at the circularity of those raw materials.	supply. After an initial phase of rapid growth of demand for critical raw material for new technologies, where primary extraction and processing will still constitute the predominant source, countered with measures to reduce the need for critical raw materials by promoting resource efficiency, recycling should become increasingly important and reduce the need for primary extraction and its associated impacts. This should be done while maintaining a high level of recycling capacity in the Union via a strong market for secondary critical raw materials. Today, however, recycling rates of most critical raw materials are low, with end-of-life products such as batteries, electrical and electronic equipment, vehicles and semi-conductors being shipped outside of the Union for recycling, and Recycling systems and technologies are often not adapted to the specificities of these raw materials, and a number of products that contain critical raw material can therefore not be recycled. Innovation plays an important role in reducing the need for critical raw materials, reducing the risks of shortage of supply and for the development of recycling technologies to properly and safely extract materials from end-of-life	

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement
			products. Prompt action addressing the different factors holding back the circularity potential is thus required.	
Recital 41a				
50a		(41a) Europe needs to enhance its open strategic sovereignty and increase its resilience in preparation for potential disruptions in supply due to health or other crises. Enhancing circularity and resource efficiency with increased recycling and recovery of critical raw materials, will contribute to reaching that goal.		
Recital 42				
51	(42) Member States retain important competences in the field of circularity, for example in the area of waste collection and treatment systems. These should be used to increase collection and recycling rates for waste streams with a high potential for recovery of critical raw materials, making use for example of financial incentives such as discounts, monetary rewards or deposit-refund systems. Member State authorities should also make a difference as buyers of critical raw materials and of products containing	(42) Member States retain important competences in the field of circularity, for example in the area of waste collection and treatment systems. 	order to diversify supply, these efforts should continue. To develop and ensure a coherent framework for the conclusion of future partnerships, the Member States and the Commission should, as part of their interaction on the Board, discuss and ensure coordination on, inter alia, whether existing partnerships achieve the intended aims, the prioritisation of third countries for new partnerships, the content of such partnerships and their coherence and potential synergies between Member States' bilateral cooperation with relevant third countries. The Union should seek mutually beneficial partnerships with emerging market and developing economies, in coherence with its Global Gateway strategy, which contribute to the diversification of its raw materials supply chain as well as add value in the production in these countries.	order to diversify supply, these efforts should ~~continue~~ intensify and lead to the establishment of Strategic Projects. To develop and ensure a coherent framework for the conclusion of future partnerships, and to develop a European raw materials diplomacy in line with the Union's energy and climate diplomacy. The Member States and the Commission should, as part of their interaction on the Board, discuss, analyse and ensure coordination on, inter alia, whether existing partnerships achieve the intended aims, the prioritisation of third countries for new partnerships, the content of such partnerships and their coherence and potential synergies between Member States' bilateral cooperation with relevant third countries and the availability of sufficient access to finance. The Union should seek mutually beneficial and sustainable partnerships with such third countries, including with emerging market and developing economies (EMDE), in coherence with its Global Gateway strategy, Team Europe approach, common commercial policy and its development and foreign policy, which contribute to the diversification of its raw materials supply chain as well as add value in ~~the production in these~~ these	order to diversify supply, these efforts should continue. To develop and ensure a coherent framework for the conclusion of future partnerships, the Member States and the Commission should, as part of their interaction on the Board, discuss ~~and ensure coordination on~~, inter alia, whether existing partnerships achieve the intended aims, the prioritisation of third countries for new partnerships, the content of such partnerships and their coherence and potential synergies between Member States' bilateral cooperation with relevant third countries. This should be done without prejudice to the prerogatives of the Council in accordance with the Treaties. The Union should seek mutually beneficial partnerships with emerging market and developing economies, in coherence with its Global Gateway strategy, which contribute to the diversification of its raw materials supply chain as well as add value in the production in these countries.

		countries. Further efforts should also be made to invest in cooperation with international like-minded partners participating in the internal market, candidate countries or like-minded third countries that are covered neither by a Strategic Partnership nor by a free trade agreement. Those mutual interests should include the promotion and protection of environmental standards, social and human rights protection in accordance with international and national legislation, in full respect of multilateral cooperation rules.		
Recital 54a				
63a		(54a) The Union's strategic priority to diversify its critical raw materials supply needs to become a priority of the Union's external action and diplomacy in the framework of the Team Europe approach and in line with its energy and climate external policy. The Union's raw materials external policy should aim at explaining the Union's approach to resource-efficiency, sustainability, circularity and substitution as well as aim at cooperating and, if necessary, creating international fora for better coordination and		

	Commission Proposal	EP Mandate	Council Mandate	Draft Agreement
		transparency in the global raw materials markets as well as for platforms for joint purchase.		
Recital 55				
64	(55) In order to support the implementation of tasks pertaining to the development of Strategic Projects and their financing, exploration programmes, monitoring capacities or strategic stocks and to advise the Commission appropriately, a European Critical Raw Materials Board should be established. The Board should be composed of Member States and of the Commission, while being able to ensure participation of other parties as observers. To develop the necessary expertise for the implementation of certain tasks, the Board should establish standing sub-groups on financing, exploration, monitoring and strategic stocks, that should act as a network by gathering the different relevant national authorities and, when necessary, consult industry, academia, civil society and other relevant stakeholders. The Board's advice and opinions should be non-binding and the absence of such an advice or opinion should not prevent the Commission from performing its tasks under this Regulation.	(55) In order to support the implementation of tasks pertaining to the development of Strategic Projects and their financing, exploration programmes, monitoring capacities or strategic stocks and to advise the Commission appropriately, a European Critical Raw Materials Board should be established.– The Board should be composed of Member States, a representative of and ~~and of the~~ Commission, while being able to ensure participation of civil society and other parties as observers such as academics, civil society organisations, other Union institutions and Union agencies. To develop the necessary expertise for the implementation of certain tasks, the Board should establish standing sub-groups on financing, exploration, monitoring and strategic stocks as well as sustainability, that should act as a network by gathering the different relevant national authorities and, when necessary, consult industry, academia, civil society and other relevant stakeholders. 		account when conducting the review referred to in Article 46.		
Article 1(4b)				
87b		4b. The Commission shall, by means of a delegated act adopted by [3 months after the entry into force of this Regulation] in accordance with Article 36, provide projections of annual consumption of critical raw materials until 2050 with intermediary milestones and update them at least every 4 years. Those projections shall be based on a technology-rich bottom-up cost optimisation input-output modelling exercise, extending existing data and reports produced by the Commission's Joint Research Centre (JRC) considering different scenarios, including low and high demand scenarios as well as a reference scenario. These projections shall be disaggregated at the level of each Member State or below, and covering all the economic sectors. This shall include the critical raw materials incorporated in intermediate or final products placed on the Union market, and be in line with the Union's energy and climate objectives and with the ambitions enshrined into the		<u>4b.
