brought about a further step in the development of the internal market for electricity with citizens at its core and contributing to the Union's objectives of transition to a clean energy system and reducing greenhouse gas emissions. The internal market in natural gas should be built on those same principles and, in particular, ensure an equal level of consumer protection.		
(5) The Union has aims to cut greenhouse gas emissions. It has therefore adopted a set of initiatives to reach that goal, including the energy system integration strategy and the hydrogen strategy published by the Commission		

[8] Directive (EU) 2019/944 of the European Parliament and of the Council of 5 June 2019 on common rules for the internal market for electricity and amending Directive 2012/27/EU (OJ L 158, 14.6.2019, p. 125).

ranging from aviation and shipping to hard-to-decarbonise industrial sectors. All final customers connected to hydrogen systems will benefit from basic consumer rights applicable to final customers connected to the natural gas system such as the right to switch supplier and accurate billing information. In those instances where customers are connected to the hydrogen network, e.g. industrial customers, they will benefit from the same consumer protection rights applicable to natural gas customers. However, consumer provisions designed to encourage household participation on the market such as price comparison tools, active customers and citizen energy communities do not apply to the hydrogen system.		
(9) In line with the EU Hydrogen Strategy,

PUBLIC

Presidency compromised text	**Drafting Suggestions**	**Comments**
the priority for the EU is to develop renewable hydrogen produced using mainly wind and solar energy. Renewable hydrogen is the most compatible option with the EU's climate neutrality and zero pollution goal in the long term and the most coherent with an integrated energy system. However, low-carbon fuels (LCFs) such as low-carbon hydrogen (LCH) may play a role in the energy transition, particularly in the short and medium term to rapidly reduce emissions of existing fuels, and support the uptake of renewable fuels such as renewable hydrogen. In order to support the transition, it is necessary to establish a threshold for greenhouse gas emission reductions for low-carbon hydrogen and synthetic gaseous fuels. Such threshold should become more stringent for hydrogen produced in installations starting

operations from 1 January 2031 to take into account technological developments and better stimulate the dynamic progress towards the reduction of greenhouse gas emissions from hydrogen production. The EU Energy System Integration strategy highlighted the need to deploy an EU–wide certification system to also cover low-carbon fuels with the aim to enable Member States to compare them with other decarbonisation options and consider them in their energy mix as a viable solution. In order to ensure that LCF have the same decarbonisation impact as compared to other renewable alternatives it is important that they are certified by applying a similar methodological approach based on a life cycle assessment of their total greenhouse gas ('GHG') emissions. This would allow deploying a comprehensive EU-wide

service obligations in the form of price setting for the supply of natural gas constitute a fundamentally distortive measure that often leads to the accumulation of tariff deficits, the limitation of consumer choice, poorer incentives for energy saving and energy efficiency investments, lower standards of service, lower levels of consumer engagement and satisfaction, and the restriction of competition, as well as to there being fewer innovative products and services on the market. Consequently, Member States should apply other policy tools, in particular targeted social policy measures, to safeguard the affordability of natural gas supply to their citizens. Public interventions in price setting for the supply of natural gas should be carried out only as public service obligations and should be subject to specific conditions. A

consumer complaints, a factor that contributes to the persistently low levels of consumer satisfaction and engagement in the gas sector. Provisions for billing information in the gas sector also lag behind rights granted to consumers in the electricity sector. It is therefore necessary to align them and to set minimum requirements for bills and billing information in the gas sector, so that consumers have access to transparent, easy to understand information. Bills should convey information to the final consumers on their consumption and costs, thus facilitating comparison between offers and switching supplier, as well as information on their consumer rights (such as on alternative dispute resolution). In addition, bills should be a tool to actively engage consumers in the market, so that consumers can manage their

(70) In order to ensure transparency with regard to the costs and financing of regulated activities, activities of hydrogen network operation should be separated from other network operation activities for other energy carriers at least in relation to the legal form and accounts of network operators.	(70) In order to ensure transparency with regard to the costs and financing of regulated activities, activities of hydrogen network operation should be separated from other network operation activities for other energy carriers ~~at least~~ in relation to the ~~legal form and~~ accounts of network operators.	The legal separation between the gas transmission network operator and the hydrogen network operator may result in excessive and unnecessary costs and administrative burdens (e.g. complications regarding land-use authorisations in the process of transferring assets between the two legal entities). Joint operation for hydrogen and gas networks can create synergies and should thus be allowed. Depending on national conditions repurposing existing natural gas pipelines may be a quicker and more economical way to develop a hydrogen network, compared to the option of building new hydrogen assets. Having this in mind transmission gas network operators should be able to also become hydrogen network operators. This will allow to make full use of

		similarities and synergies in terms of the skills, knowledge and resources that are required to develop and safely operate the gas and future hydrogen pipeline networks. The need to set up a separate company acting as a hydrogen network operator will not be a means of achieving this objective, while at the same time preventing the exploitation of synergies between these activities. The separation of Regulatory Asset Bases for natural gas and hydrogen networks in accordance with art. 64 of the Directive ensures sufficient transparency to trace any financial transfer between natural gas and hydrogen under the close scrutiny of regulatory authorities and subject to their approval.
(71) Hydrogen networks should be subject to

(111) The energy system integration strategy points out the importance of the coordinated planning and operation of the energy system in achieving the decarbonisation objectives. Therefore it is necessary to draw up a network development plan based on a joint scenario developed on a cross-sectoral basis. While still keeping separate sectorial plans, infrastructure operators should work towards a higher level of integration taking into account system needs beyond specific energy carriers.		
(112) Network development plans are an important element to identify infrastructure gaps and provide information on infrastructure that either needs to be built or that can be decommissioned and could be used for other purposes, such as hydrogen transport. This is

which are fundamental for achieving the objectives of this Directive. It is of particular importance that the Commission carries out appropriate consultations during its preparatory work, including at expert level, and that those consultations be conducted in accordance with the principles laid down in the Interinstitutional Agreement of 13 April 2016 on Better Law-Making[25]. In particular, to ensure equal participation in the preparation of delegated acts, the European Parliament and the Council receive all documents at the same time as Member States' experts, and their experts systematically have access to meetings of Commission expert groups dealing with the preparation of the delegated acts.

1. Member States shall ensure that all final customers are entitled to have gases provided by a supplier, subject to the supplier's agreement, regardless of the Member State in which the supplier is registered, provided that the supplier follows the applicable trading and balancing rules. In that regard, Member States shall take all measures necessary to ensure that administrative procedures do not discriminate against suppliers already registered in another Member State.	1. Member States shall ensure that all final customers are entitled to have gases provided by a supplier, subject to the supplier's agreement, regardless of the Member State in which the supplier is registered, provided that the supplier follows the applicable trading and balancing rules**,** and any required authorisations compliant with Article 7 (2) are granted by national regulatory authority in the Member State where the gas is supplied. In that regard, Member States shall take all measures necessary to ensure that administrative procedures do not discriminate against suppliers already registered in another Member State.	In order to provide appropriate market functioning and protection of customers the provisions of the Gas Directive should be clear in allowing for maintaining the authorisation (license) for gas suppliers issued by the regulatory authority regardless of the Member State of origin of the supplier in a non-discriminatory manner. Historical experience proves that authorisation is necessary. Several entities with aggressive market strategy found themselves in a situation of lack of possibility to balance their portfolio and provide gas to their suppliers. This required emergency supplier to step in to protect the end customers from lack of supplies. Therefore, the wording of the provision should be amended to ensure non-discriminatory compliance with certain standards that already exist and are applied in

		These facilities should be regarded as sector-coupling infrastructure offering 'conversion or decarbonisation services' since power-to-gas is transforming electricity from a RES electricity producer, or any other electricity sources, into gas (i.e. hydrogen) for further use in the energy system. Power to Gas facilities will operate at the interface of the electricity and gas sector. Gas and hydrogen system operators are especially well suited to facilitate the development of gas-based decarbonisation technologies, such as Power to Gas units, and to ensure the internal energy market is maintained and further developed, both in a methane and hydrogen-based economy. Such engagement stays in line with the Union principles for the energy systems such as competitiveness, transparency, fair and non-discriminatory access

	2a. Member States may allow the transmission system operators to refuse connection of renewable and low carbon production facilities in any of the following situations : (a) the system lacks the necessary capacity; (b) the renewable and low carbon gases does not meet the technical parameters necessary to connect and ensure the reliable and safe operation of the gas system; (c) the connection does not meet the conditions of economic efficiency, which should be defined taking into account local conditions and the impact of connection costs on the prices of natural gas for final consumers.	The specification of the conditions for refusing to connect new renewable and low-emission gas production installations results from the need to ensure the safe operation of the gas network, and to adequately take into account the cost-effectiveness of connection to the system.

Combined operator		
Article ~~2644~~ 42 (1) shall not prevent the operation of a combined transmission, LNG, storage and distribution system operator provided that the operator complies with Article 54~~9~~ (1), or ⌦ Articles ⌫ 55~~14~~ and 56~~15~~, or Chapter IX~~IV~~ ~~or falls under Article 4982(6)~~.	Article ~~2644~~ 42 (1) shall not prevent the operation of a combined transmission, LNG, storage, ~~and~~ distribution system, hydrogen network, hydrogen terminal, or hydrogen storage operator provided that the operator complies with Article 54~~9~~ (1), or ⌦ Articles ⌫ 55~~14~~ and 56~~15~~, or Chapter IX~~IV~~ ~~or falls under Article 4982(6)~~.	The possibility of combining the functions of hydrogen or hydrogen and gas infrastructure operators, depending on local conditions, is essential for the efficient functioning of the future hydrogen market and the development of the natural gas market. The combined operator model has proven to work well for gas infrastructure allowing to fully exploit synergies between different categories of gas infrastructure for the benefits of consumers and other market participants. There is no compelling justifications for excluding such

Article 63		
Horizontal unbundling of hydrogen network operators		

Proposal for Gas Directive ST 12024/22

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

PUBLIC

Presidency compromised text	**Drafting Suggestions**	**Comments**
Where a hydrogen network operator is part of an undertaking active in transmission or distribution of natural gas or electricity, it shall be independent at least in terms of its legal form.	~~Where a hydrogen network operator is part of an undertaking active in transmission or distribution of natural gas or electricity, it shall be independent at least in terms of its legal form.~~ Nothing in this Directive shall oblige hydrogen network operators to be independent from transmission or distribution system operators in terms of legal form, management and organisation, and shall prevent the leasing of personnel and rendering of services from a transmission or distribution system operator to a hydrogen network operator and conversely from a hydrogen network operator to a transmission or distribution system operator, as well as joint procurement schemes or the set-up of joint ventures for carrying out specific tasks.	The Requirement for legal unbundling of the hydrogen network operator from the rest of the transmission or distribution company is disproportionate. The risk of possible cross-subsidization between the hydrogen and gas/electricity activities is sufficiently eliminated by the requirement to separate bases of regulated assets and the obligation to implement accounting unbundling. Joint operation for hydrogen and gas networks can create synergies and should thus be allowed. Moreover, depending on national conditions, repurposing existing natural gas pipelines may be a quicker and more economical way to develop a hydrogen network, compared to the option of building new hydrogen assets. It is

		therefore expected that a significant proportion of the future hydrogen network will be composed of repurposed gas assets. Given this transmission or distribution gas network operators should be able to also become hydrogen network operators taking into account similarities in terms of the skills, knowledge and resources that are required to develop and safely operate the gas and future hydrogen pipeline networks. The separation of Regulatory Asset Bases (RABs) ("accounting unbundling") for natural gas and hydrogen networks as stipulated in Art. 64 of the Directive ensures sufficient transparency to trace any financial transfer between natural gas and hydrogen under the close scrutiny of regulatory authorities and subject to their approval. An additional legal separation between HNOs and TSOs/DSOs is
