REQUEST FOR CONTRIBUTION

From:	General Secretariat of the Council
To:	Working Party on Genetic Resources and Innovation in Agriculture (Seeds, Propagating and Planting Materials)
Subject:	Regulation on plant reproductive material - Request for contributions on recitals - Ddl: 21 November 2025 cob

Following the meeting of the Working Party on Genetic Resources and Innovation in Agriculture (Seeds, propagating and planting material; PRM) of 6 and 7 November 2025, delegations are invited to provide their comments/drafting suggestions on the Presidency's revised text concerning the recitals of the proposal for a Regulation on the production and marketing of plant reproductive material in the Union.

Deadline for contributions: **21 November 2025 , close of business.**

Guidelines to be followed

Please kindly provide your contributions in the table below.

Drafting suggestions: you may use '**track changes**'* or formatting (for example **bold-underline** for additions and ~~strike-through~~ for deletions, **where necessary, in a different colour**). *Track changes can only be connected once the cursor is placed in editable areas (Drafting or Comments columns).

To make it feasible to consolidate all contributions, the structure of the table must not be changed, so **no rows can be added or deleted**.

New provisions may only be added in any of the '**existing cells**'.

Name of document: please add the **two initials** of your delegation's country followed by a space (to the MS Word document name), followed by any optional text, for example, for Austria: **AT comments ondocx**

Thank you for your cooperation!

Presidency revised text	Drafting suggestions	Comments
<p align="center">REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL</p>		
<p>on the production and marketing of plant reproductive material in the Union, amending Regulations (EU) 2016/2031, <u>and (EU) 2017/625 and 2018/848</u> of the European Parliament and of the Council, and repealing Council Directives 66/401/EEC, 66/402/EEC, 68/193/EEC, 2002/53/EC, 2002/54/EC, 2002/55/EC, 2002/56/EC, 2002/57/EC, 2008/72/EC and 2008/90/EC (Regulation on plant reproductive</p>

<p>material) (Text with EEA relevance)</p>		
<p>THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,</p>		
<p>Having regard to the Treaty on the Functioning of the European Union, and in particular Article 43(2) thereof,</p>		
<p>Having regard to the proposal from the European Commission,</p>		
<p>After transmission of the draft legislative act to the national parliaments,</p>		
<p>Having regard to the opinion of the European Economic and Social Committee</p>		
<p>Acting in accordance with the ordinary legislative procedure,</p>		
<p>Whereas:</p>		
<p>(1) Rules for the production and marketing of plant reproductive material ('PRM') of agricultural crops, vegetables, vine and fruit plants have been</p>		

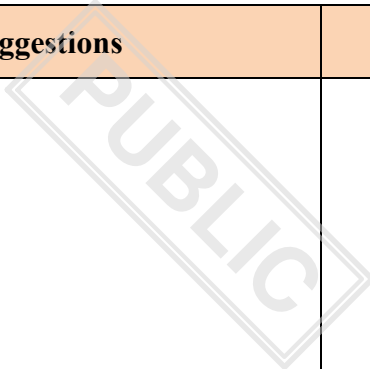

Presidency revised text	Drafting suggestions	Comments
<p>established at Union level since the 1960s. The production and marketing of PRM on the Union territory is regulated by Council Directives 66/401/EEC⁽¹⁾; 66/402/EEC⁽²⁾; 68/193/EEC⁽³⁾; 2002/53/EC⁽⁴⁾; 2002/54/EC⁽⁵⁾; 2002/55/EC⁽⁶⁾; 2002/56/EC⁽⁷⁾; 2002/57/EC⁽⁸⁾; 2008/72/EC⁽⁹⁾ and 2008/90/EC⁽¹⁰⁾ (the ‘PRM marketing Directives’). These legal acts have formed the legal framework for the production and marketing of PRM and therefore have been of major importance for the creation of the internal market of PRM in the Union.</p> <hr/> <p>1 Council Directive 66/401/EEC of 14 June 1966 on the marketing of fodder plant seed (OJ 125, 11.7.1966, p. 2298).</p> <p>2 Council Directive 66/402/EEC of 14 June 1966 on the marketing of cereal seed (OJ 125, 11.7.1966, p. 2309).</p> <p>3 Council Directive 68/193/EEC of 9 April 1968 on the marketing of material for the vegetative propagation of the vine (OJ L 93, 17.4.1968, p. 15).</p> <p>4 Council Directive 2002/53/EC of 13 June 2002 on the common catalogue of varieties of agricultural plant species (OJ L 193, 20.7.2002, p. 1).</p> <p>5 Council Directive 2002/54/EC of 13 June 2002 on the marketing of beet seed (OJ L 193, 20.7.2002, p. 12).</p>		

Presidency revised text	Drafting suggestions	Comments
<p>6 Council Directive 2002/55/EC of 13 June 2002 on the marketing of vegetable seed (OJ L 193, 20.7.2002, p. 33).</p> <p>7 Council Directive 2002/56/EC of 13 June 2002 on the marketing of seed potatoes (OJ L 193, 20.7.2002, p. 60).</p> <p>8 Council Directive 2002/57/EC of 13 June 2002 on the marketing of seed of oil and fibre plants (OJ L 193, 20.7.2002, p. 74).</p> <p>9 Council Directive 2008/72/EC of 15 July 2008 on the marketing of vegetable propagating and planting material, other than seed (OJ L 205, 1.8.2008, p. 28).</p> <p>10 Council Directive 2008/90/EC of 29 September 2008 on the marketing of fruit plant propagating material and fruit plants intended for fruit production (OJ L 267, 8.10.2008, p. 8).</p>		
<p>(2) The impact assessments carried out by the Commission in 2013 and 2023 confirmed that those Directives have had a significant impact on the free movement, availability and high quality of PRM on the Union market and have thus facilitated the trade of PRM within the Union.</p>		
<p>(3) However, the rules on production and marketing of PRM need to be adapted to the scientific and technical developments in the areas of</p>		

Presidency revised text	Drafting suggestions	Comments
<p>agricultural and horticultural production techniques and plant breeding. Moreover, the legislation needs to be updated on the basis of changes in international standards and experience gained by the application of the PRM Directives. Those rules need to be clarified in order to facilitate a more harmonised implementation. Therefore, the PRM marketing Directives should be replaced by a single Regulation on the production and marketing of PRM within the Union.</p>		
<p>(4) PRM constitutes the starting material for plant production in the Union. Therefore, it is critical for the production of raw material for food and feed purposes and for the efficient use of plant resources. It contributes to environmental protection and the quality of the food chain and food supply in the Union as a whole. In this regard, the availability, quality and diversity of PRM appears to be of outmost importance to achieve the transition to sustainable food systems called for in the Farm to Fork Strategy¹¹, agriculture, horticulture, environmental protection, climate change mitigation and adaptation, food and feed security, and the economy in general.</p> <hr/> <p>¹¹ Communication from the Commission to the European Parliament, the European Council, the Council, the European Economic and Social Committee and the Committee of the Regions, A Farm to Fork Strategy for a fair, healthy and</p>		

Presidency revised text	Drafting suggestions	Comments
<p>environmentally-friendly food system (COM(2020) 381 final).</p>		
<p>(5) In order to achieve this transition to sustainable food systems, the Union legislation should therefore take account of the need to ensure the adaptability of the PRM production to the changing agricultural, horticultural and environmental conditions, to face the challenges of climate change, to protect and restore biodiversity and to meet increasing farmers’ and consumers’ expectations related to quality and sustainability of PRM.</p>		
<p>(6) The scope of this Regulation should only cover the PRM of certain genera and species of increased economic and social importance. That importance should be assessed depending on whether the PRM or the crop of such genera and species represent a significant area of production and value in the Union, on their role for the security of food and feed production in the Union, and on whether they are marketed in at least two Member States. That area of production and value may concern several technical aspects. Depending on the circumstances, it may be calculated on the basis of factors such as the total size of productive land in several different areas of the Union, the marketing value of PRM in relation to specific sectors, or the</p>		

Presidency revised text	Drafting suggestions	Comments
demands for those species by farmers, final users and industry.		
(7) Those genera and species should be listed and classified by their intended use, namely as agricultural plants erops , vegetables plants , fruit plants, potato or and vine. That classification is necessary to ensure a proportionate approach, as some species are only important for certain uses.		
(8) Furthermore, some varieties may have certain characteristics that, when cultivated under certain conditions, could have undesirable agronomic effects that would undermine the objective of the Regulation to contribute to the sustainability of agricultural production. This objective can only be achieved if such varieties are subject to appropriate cultivation conditions under which those undesirable agronomic effects are avoided. Those conditions should apply to the cultivation of those varieties for the production of food, feed or industrial materials and not only when intended for the production and marketing of PRM. Therefore, this Regulation should cover the conditions under which those varieties are cultivated, also for the production of food, feed or other products.		
(9) PRM should be defined in a comprehensive manner, including all plants capable of, and		

Presidency revised text	Drafting suggestions	Comments
<p>intended for, producing entire plants. This Regulation should, therefore, cover seeds, as well as all other forms of plants at any growth stage, capable of and intended for producing entire plants. <u>It should also cover rootstocks and other parts of plants of genera or species or their hybrids, which are not covered by this Regulation, if the material of genera or species covered by this Regulation or their hybrids is grafted or is to be grafted onto them.</u></p>		
<p>(10) This Regulation should not cover forest reproductive material due to its particular characteristics, and very different concepts and applicable terminology. For this reason, forest reproductive material is subject to a separate legal act, and namely Regulation (EU) .../... of the European Parliament and of the Council¹² +.</p> <hr/> <p>12 Regulation (EU) .../... of the European Parliament and of the Council (OJ...., p....). + OJ: Please insert in the text the number of the Regulation contained in document (... (COD)) and insert the number, date, title and OJ reference of that Regulation in the footnote.</p>		
<p>(11) This Regulation should not cover <u>PRM of genera and species intended for propagating material of ornamental plants, purposes with the</u></p>		

Presidency revised text	Drafting suggestions	Comments
<p>exception of PRM intended for turf grass purposes because after consultations with Member States and stakeholders it has been concluded that Council Directive 98/56/EC ⁽¹³⁾ still adequately covers the needs of that sector.</p> <p>_____</p> <p>13 Council Directive 98/56/EC of 20 July 1998 on the marketing of propagating material of ornamental plants (OJ L 226, 13.8.1998, p. 16).</p>		
<p>(12) This Regulation should cover neither PRM intended for exported to third countries, nor PRM used solely for official testing, inspection, sampling or testing, breeding, inspections, exhibitions or scientific purposes. This is because such categories of PRM do not require particular harmonised identity or quality standards and do not compromise the identity and quality of other PRM marketed in the Union.</p>		
<p>(13) This Regulation should not cover PRM sold or transferred in any other way, whether free of charge or not, between non-professional users any persons for their own private use and outside their trade. It would be disproportionate to set out rules for such use of PRM, as this kind of transfer is usually limited to very small amounts, has no commercial purposes and is restricted to private activities.</p>		

Presidency revised text	Drafting suggestions	Comments
<p><u>(13a) This Regulation should not cover PRM sold or transferred in any other way, not aimed at its commercial exploitation but subject to service contracts for the purposes of processing including cleaning, disinfection, treatment, packaging, as well as transport, or storage, provided that the provider of services does not acquire title to that PRM.</u></p>		
<p><u>(13b) This Regulation should not cover PRM supplied to providers of services for the production of certain agricultural raw materials intended for industrial purposes, or PRM produced for that purpose.</u></p>		
<p><u>(13c) This Regulation should not cover PRM used by gene banks for the conservation of plant genetic resources nor organic heterogenous material produced in accordance with Regulation (EU) 2018/848.</u></p>		
<p>(14) In order to allow for informed choices by the users, PRM should be produced and marketed only if it belongs to varieties registered in <u>a</u> national a variety register.</p>		

Presidency revised text	Drafting suggestions	Comments
<p>(15) However, it is appropriate to exempt, where necessary, rootstocks <u>for fruit plants and vine</u> from the requirement to belong to a variety, as although of a significant value, they frequently do not fall under the definition of a variety.</p>		
<p>(16) In order to ensure the identity, quality and transparency and to enable informed choices by the users, PRM should as a general rule be produced or marketed under predefined categories. Those categories should reflect different generation stages and quality levels, and, on the basis of the internationally established terminology, be named ‘pre-basic’, ‘basic’, ‘certified’ and ‘standard’ seed, and ‘pre-basic’, ‘basic’, ‘certified’ and ‘standard’ material, in the case of PRM other than seeds, and.</p>		
<p><u>(28 16a) The PRM marketing Directives and international practice and standards require that PRM belonging to certain species, vine rootstocks and selected clones are only produced and marketed as pre-basic, basic or certified seed, due to their importance for food security and industrial processing, and for the protection of the interests of the farmers using them. For this reason, certain PRM should only be produced and marketed in the pre-basic, basic or certified categories, if the costs for their production and marketing are proportionate to the purpose of ensuring quality PRM for the</u></p>		

Presidency revised text	Drafting suggestions	Comments
<p><u>farmers, food and feed security, or are proportionate to the purpose of ensuring high value of industrial processing. Those costs should also be proportionate to the achievement of the highest standards concerning the identity and quality of the PRM, in line with the requirements for pre-basic, basic and certified PRM. A list of those species of PRM which may only be produced and marketed in the pre-basic, basic or certified categories should thus be established.</u></p>		
<p>(17) PRM of each of those categories should be produced and marketed in accordance with the applicable international standards, in order to ensure the highest possible level of its identification and quality, and to be in line with the latest technical and scientific developments. Those standards should include, as applicable, the Schemes for the Varietal Certification or the Control of Seed Moving in International Trade ⁽¹⁴⁾ (‘OECD Seed Schemes’), the seed potato standards of the United Nations Economic Commission for Europe (UNECE) and the rules on seed sampling and testing of the International Seed Testing Association (ISTA).</p> <hr/> <p>14 Decision Revising the OECD Schemes for the Varietal Certification or the Control of Seed Moving in International Trade [OECD/LEGAL/0308] (‘OECD Seed Schemes’).</p>		

Presidency revised text	Drafting suggestions	Comments
<p>(18) In accordance with those standards, compliance of PRM with the requirements for the categories pre-basic, basic or certified should be confirmed by inspections, sampling, testing and official control plot testing carried out by the competent authorities ('official certification') <u>or certification by the professional operator under official supervision</u> and should be attested by an official label.</p>		
<p><u>(18a) It should be possible to specify, by means of implementing acts, more stringent production and marketing requirements that are to be applicable in certain parts of the Union territory, if so required by the agro-climatic conditions, risk of spreading of noxious weeds, for example wild oat, or other special conditions and needs of certain areas.</u></p>		
<p><u>(18b) Compliance of PRM with the requirements for the standard category should be confirmed by the professional operator and its compliance with those requirements should be attested by an operator's label.</u></p>		

Presidency revised text	Drafting suggestions	Comments
<p>(19) Specific rules should be established for the production and marketing of clones, selected clones, multiclonal mixtures and polyclonal PRM, and Due to their increased importance and use in the PRM sector <u>and</u> . In order to ensure transparency, informed choices for their users and effective official controls, the <u>selected clones and polyclonal material</u> should be registered in a special public register <u>national register</u> established by the competent authorities <u>and specific rules for the production and marketing should be established.</u> Rules for the maintenance of the clones should also be established to ensure their preservation and identification.</p>		
<p>(31 <u>19a) Control plot tests should be carried out by the competent authority to verify the varietal identity and varietal purity of individual seed lots, except for lots of seed of vine and fruit species. Specific rules should be set out concerning those tests on pre-basic, basic, certified and standard seed, on the basis of the applicable international standards and the experience gained by the application of the PRM marketing Directives.</u></p>		
<p>(20) Professional operators should be authorised by the competent authority to perform certification under official supervision of PRM belonging to certain species and categories and print the official</p>		

Presidency revised text	Drafting suggestions	Comments
<p>label. Rules should be set out for the respective official supervision by the competent authority and the withdrawal of that authorisation or its modification. Those rules are necessary to ensure that the entire certification system functions effectively.</p>		
<p>(21) In order to ensure the maximum possible purity and homogeneity of PRM, PRM should be kept in separate lots, and separate from other material different to PRM, such as grain for food or feed.</p>		
<p>(22) In view of the large diversity of PRM, professional operators should be able to market the PRM lots in the form of individual plants, packages, bundles or containers, or in bulk.</p>		
<p>(23) Rules should be adopted for the labelling of PRM to ensure the appropriate identification of that material per category through the attestation of compliance with the respective requirements concerning pre-basic, basic, certified and standard seed and material.</p>		
<p>(24) In the case of pre-basic, basic and certified seed and material, an official label should be issued by the competent authority, while for standard seed or material an operator’s label should be issued.</p>		

Presidency revised text	Drafting suggestions	Comments
<p>This is necessary to make a distinction between PRM subject to certification (official certification or certification under official supervision) and PRM produced under the responsibility of the professional operator. Issuing of a specific label aims at facilitating informed choices by the professional operators and consumers who may wish to select PRM of different standards. It would also facilitate the work of the competent authorities in designing their official controls in accordance with the respective requirements of each category.</p>		
<p>(25) The official label should be printed and affixed by authorised professional operators and under the official supervision of the competent authorities. However, and since certain professional operators may not have the resources to carry out all the certification activities and print official labels, it should be provided that any certification steps may also be carried out by the competent authorities upon request of professional operators.</p>		
<p>(26) Rules should be set out concerning the contents and form <u>characteristics</u> of the official label and operator’s label, to ensure a uniform application of the respective production and marketing requirements for each category and the identification of those labels.</p>		

Presidency revised text	Drafting suggestions	Comments
<p>(30 26a) Requirements should be established concerning the re-packaging, re-sealing and re-labelling of pre-basic, basic and certified PRM, in order to guarantee that the identity and the quality of the respective PRM will not be subject to change during those operations.</p>		
<p>(27) Each official label and operator's label should contain a serial number, so as to guarantee the appropriate identification and traceability of the PRM concerned and the effectiveness of the official controls.</p>		
<p>(28) The PRM marketing Directives and international practice and standards require that seed belonging to certain species are only produced and marketed as pre-basic, basic or certified seeds, due to their importance for food security and industrial processing, and for the protection of the interests of the farmers using them. For this reason, certain seed should only be produced and marketed as pre-basic, basic or certified seed, if the costs for their production and marketing are proportionate to the purpose of ensuring quality seed for the farmers, food and feed security, or are proportionate to the purpose of ensuring high value of industrial processing. Those costs should also be proportionate to the achievement of the highest standards concerning the identity and quality of the</p>		

Presidency revised text	Drafting suggestions	Comments
<p>seed, in line with the requirements for pre-basic, basic and certified seed. A list of those species of seed which may only be produced and marketed as pre-basic, basic or certified seed should thus be established.</p>		
<p>(29) Seeds are frequently marketed in varietal mixtures of same species or species mixtures. However s <u>Seeds</u> of genera or species, covered by this Regulation, should be allowed to be produced and marketed in mixtures only with seeds of the genera or species covered by this Regulation. This is necessary to ensure that the respective production and marketing standards are respected. However, Member States should have the possibility to allow the production and marketing of a mixture of seeds covered by this Regulation, with seeds not belonging to genera or species covered by this Regulation, <u>without prejudice to Regulation (EU) No 1143/2014 on the prevention and management of the introduction and spread of invasive alien species. If such mixtures are</u> for the purposes of conservation of genetic resources and preservation of the natural environment, <u>they should be marketed only in their region of origin.</u> This is because those species are the ones most appropriate for the purpose of that preservation. Rules should be set out concerning those mixtures to ensure their identity and quality.</p>		

Presidency revised text	Drafting suggestions	Comments
<p>(30) Requirements should be established concerning the re-packaging and re-labelling of pre-basic, basic and certified seed, in order to guarantee that the identity and the quality of the respective PRM will not be subject to change during those operations.</p>		
<p>(31) Control plot tests should be conducted to verify the varietal identity and purity of individual seed lots. Specific rules should be set out concerning those tests on pre-basic, basic, certified and standard seed, on the basis of the applicable international standards and the experience gained by the application of the PRM marketing Directives.</p>		
<p>(32) Certain types of varieties do not fulfil the established requirements concerning distinctness, uniformity and stability. However, they are important for the conservation and sustainable use of plant genetic resources. They are can be traditionally grown varieties of all crop types or new locally produced varieties of fruit plants or vegetable plants under specific local conditions and adapted to those local agro-climatic conditions and farming systems. They are characterised, in particular, by reduced uniformity due to a high certain level of genetic and phenotypical diversity between individual reproductive units. Those varieties are referred to as ‘conservation varieties’</p>		

Presidency revised text	Drafting suggestions	Comments
<p>or ‘local varieties’. The production and marketing of those varieties contribute to the objectives of the International Treaty on Plant Genetic Resources for Food and Agriculture to promote the conservation and sustainable use of plant genetic resources for food and agriculture ⁽¹⁵⁾. As a party to the Treaty the Union has committed to support those objectives.</p> <hr/> <p>15 Council Decision 2004/869/EC of 24 February 2004 concerning the conclusion, on behalf of the European Community, of the International Treaty on Plant Genetic Resources for Food and Agriculture (OJ L 378, 23.12.2004, p. 1).</p>		
<p>(33) In view of those special characteristics of the conservation varieties and local varieties, and by way of derogation from the established requirements for production and marketing, the production and marketing of PRM belonging to them should be allowed under less stringent requirements. That objective is in line with the principles of the European Green Deal, and in particular, with the principle of protection of the biodiversity. It is thus appropriate to allow for that material to comply with the requirements for standard material for the species concerned. That PRM belonging to conservation varieties or local varieties should therefore be labelled with the indication ‘Conservation varieties’ or ‘local</p>		

Presidency revised text	Drafting suggestions	Comments
<p><u>varieties</u>'. Those varieties should also be registered, to enable their control by the competent authorities and guarantee the informed choices for their users and the effectiveness of official controls.</p>		
<p>(34) Experience from the application of the marketing Directives has shown that final <u>non-professional</u> users of PRM (amateur gardeners and others) are often interested in using more diverse PRM that responds to different needs, without necessarily having the same quality demands as the professional operators. It is therefore appropriate to allow, by way of derogation from certain rules, that PRM <u>of fruit and vegetable plant species</u> may be marketed to final <u>non-professional</u> users without having to comply with the requirements for variety registration and without having to comply with the certification requirements or with the requirements for standard material. That derogation is necessary to ensure a wider <u>scope of variety varieties</u> for consumer offer, while respecting the general quality requirements. Moreover, for reasons of transparency and better control, rules should be set out for the packaging and labelling of PRM intended for final <u>non-professional</u> users only. For the same reason, professional operators using this derogation for marketing to final <u>non-professional</u> users <u>should, in case of PRM belonging to an unregistered variety, have a description of the variety made on the basis of private documentation and they</u> should notify that activity</p>		

Presidency revised text	Drafting suggestions	Comments
to the competent authorities <u>and inform them, upon request, of the quantities produced and marketed.</u>		
<p>(35) Many gene banks, non-profit organisations and networks operate in the Union with an objective to conserve plant genetic resources. In order to facilitate their activity, it is appropriate to allow that PRM <u>intended for the conservation of plant genetic resources</u> which is <u>produced and marketed by those organisations and networks to them, or among them, to natural or legal persons who carry out conservation of PRM and to farmers or non-professional users</u> derogates from the established production and marketing requirements, and that instead it complies with less stringent rules. <u>Rules should be set out concerning the labeling of such PRM.</u></p>		
<p>(36) Farmers habitually exchange in kind small quantities of seeds in order to carry out dynamic management of their own seed. It is thus appropriate that a derogation from the established requirements is provided for the exchanges of small quantities of seeds between farmers <u>at local level</u>. Such derogation could should apply if those that seeds do not belong to a variety for which plant variety rights have been granted in accordance with Council Regulation (EU) 2100/94⁽¹⁶⁾. Member States should be allowed to define those small</p>		

Presidency revised text	Drafting suggestions	Comments
<p>quantities for specific species per year and per farmer, in order to ensure that there is no misuse of such derogation impacting the marketing of seeds.</p> <hr/> <p>16 Council Regulation (EC) No 2100/94 of 27 July 1994 on Community plant variety rights (OJ L 227, 1.9.1994, p. 1).</p>		
<p>(36a) Fruit plant species and vine are characterised by a slow breeding process due to the growth cycle of those species. For that reason, professional operators experience a significant time delay to enter the market compared to other species. To counteract this delay, it should be possible for PRM of fruit and vine varieties that are not yet registered to be marketed during the process of registration. The varieties should be marketed as standard seed and material as there is no variety description available yet.</p>		
<p><u>(36b) The marketing of PRM prior to generations of pre-basic seed or material from the professional operator responsible for the maintenance to the professional operator carving out the production of pre-basic, basic, or certified seed or material for the purpose of multiplication of that PRM should be allowed, by derogation from the general requirements. In the event of such marketing, the accompanying</u></p>		

Presidency revised text	Drafting suggestions	Comments
<p><u>label must clearly denote the PRM as being designated for this purpose.</u></p>		
<p><u>(36c) According to the PRM marketing Directives, derogations from the established requirements are allowed for the marketing of PRM of varieties under registration. Those derogations have been useful and necessary for the professional operators and the competent authorities. Furthermore, farmers are facing increasingly difficult weather conditions and new plant health risks. The introduction of new, improved climate smart plant varieties is important to mitigate these risks. To speed up the uptake by farmers of those new varieties, in some cases and with restrictions, limited marketing of such PRM is allowed. For agricultural varieties, fruit and vine varieties and for vegetable varieties, there should be specific requirements based on their characteristics and market dynamics.</u></p>		
<p><u>(36d) According to the PRM marketing Directives, derogations are established so seed that does not belong to a registered variety can be marketed as commercial seed since certain species of agricultural plants, specifically fodder species, serve multifaceted roles that extend beyond traditional food and feed production. Those species are instrumental in ecological</u></p>		

Presidency revised text	Drafting suggestions	Comments
<p><u>functions such as attracting pollinators, facilitating nitrogen fixation, and providing ground cover. For those purposes, distinctness, uniformity and stability and the compliance with requirements for value for sustainable cultivation and use are not necessary while high quality of this PRM should be guaranteed. Therefore, derogation from registration requirements should be allowed. The designation ‘commercial seed’ should be retained from the PRM marketing Directives. Species that are added to the scope of this Regulation at a later stage and for which few varieties are developed should also benefit from this derogation in order to allow time for varieties to be developed. Furthermore, commercial seed may be necessary to ensure that seed of new species added to this Regulation can be marketed before registered varieties are available.</u></p>	<p style="text-align: center; opacity: 0.5; font-size: 48px; transform: rotate(-30deg);">PUBLIC</p>	
<p>(37) According to the PRM marketing Directives, derogations from the established requirements are allowed for the marketing of PRM belonging to not yet registered varieties; of varieties that have not yet been fully tested; of for seed not complying with the applicable requirements to be made rapidly available on the market; of seed not yet finally certified; of PRM to be temporarily authorised to address temporary difficulties in the supply; and of PRM for the conduct of temporary experiments to seek improved alternatives to certain</p>		

Presidency revised text	Drafting suggestions	Comments
<p>provisions of the applicable legislation concerning the requirements for the PRM to belong to a registered variety and to fulfil certain identity and quality requirements. Those derogations have been useful and necessary for the professional operators and the competent authorities, without creating problems for the internal market of PRM. Therefore, they should be maintained. Conditions should be set out concerning those derogations, to ensure that they are not misused and that they do not affect adversely the internal market of PRM.</p>		
<p>(38) — The use of PRM that does not belong to a variety pursuant to this Regulation, but rather belongs to a plant grouping within a single botanical taxon, with a high level of genetic and phenotypic diversity between individual reproductive units ('heterogeneous material'), could have benefits especially in organic production and low input agriculture, through improving resilience and increasing the within species genetic diversity of cultivated plants. Therefore, PRM of heterogeneous material should be allowed to be produced and marketed without having to comply with the requirements for variety registration and the other production and marketing requirements of this Regulation. Specific requirements for the production and marketing of that material should be set out.</p>		

Presidency revised text	Drafting suggestions	Comments
<p>(38a) To facilitate the advancement of agricultural diversity and innovation within the Union, varieties that are developed need to be assessed concerning their commercial viability, cultivation potential, and use for and within the Union. For this reason, derogations from the established requirements are allowed. Marketing of these unregistered varieties is conditionally authorized, strictly in quantities deemed minimal yet sufficient for conducting comprehensive tests and the tests are also authorised in time duration. Each lot must be accompanied by appropriate labelling, clearly indicating its intended use for testing purposes only. This approach ensures that there is no misuse of such derogation impacting the marketing of seeds.</p>	<p></p>	<p></p>
<p>(38b) The marketing of PRM from the maintainer or seed house to the multiplier is essential for initiating the production of pre basic, basic, certified or standard seed or material. In order to allow this marketing, derogations from the established requirements should be allowed. The marketing should only be made possible to the multiplier and the accompanying label must clearly denote the PRM as being designated for this purpose.</p>	<p></p>	<p></p>
<p>(38c) Certain species of agricultural crops, specifically fodder species, serve multifaceted roles that extend beyond traditional food and feed</p>	<p></p>	<p></p>

Presidency revised text	Drafting suggestions	Comments
<p>production. Those species are instrumental in ecological functions such as attracting pollinators, facilitating nitrogen fixation, providing ground cover, among others. For those purposes DUS and VSCU compliance are not necessary while high quality of this PRM should be guaranteed. Therefore, derogation from registration requirements should be allowed. The designation ‘commercial seed’ should be retained from the PRM marketing directives. Species that are added to the scope of this Regulation at a later stage and for which few varieties are developed can also benefit from this derogation in order to allow time for varieties to be developed.</p>		
<p>(39) Union production and marketing of PRM needs to comply with the highest possible standards. Therefore, the import of PRM from third countries should only be allowed if an assessment of their applicable identity and quality standards and certification system establishes that such PRM fulfils requirements equivalent to those applicable to PRM produced and marketed in the Union. Such assessment should be based on a thorough examination of the information provided by the third country and its relevant legislation. It should also be based on the satisfactory outcome of an audit carried out by the Commission in the respective third country <u>asking for equivalence for the first time, or in other cases</u> where that audit is considered necessary by the Commission.</p>		

Presidency revised text	Drafting suggestions	Comments
<p>(39a) Currently vegetable seed that is produced in third countries and that was not assessed as equivalent to Union produced vegetable seed enters the Union for processing in order to comply with the requirements of standard seed. After that processing, the seed is <u>can be</u> remarketed outside of the Union or marketed within the Union <u>as standard seed</u>. That practice should continue as the processing can be checked as equivalent by the competent authority.</p>		
<p>(40) Rules should be set out concerning labelling and information to be provided for the imported PRM for the purposes of its proper identification, traceability, and informed choices by its users and for enabling official controls.</p>		
<p>(41) In order to ensure transparency and more effective controls on the production and marketing of PRM, professional operators <u>active in the area of production and marketing of PRM</u> should be <u>subject to specific obligations to ensure their accountability, more effective official controls and proper application of this Regulation. This includes registered registration, record keeping and notification of production</u>. It is appropriate that they register <u>registration should be</u> in the registers established by Member States pursuant to Regulation (EU) 2016/2031 of the European</p>		

Presidency revised text	Drafting suggestions	Comments
<p>Parliament and of the Council ⁽¹⁷⁾, in order to reduce the administrative burden for those professional operators. This is also proportionate because the vast majority of professional operators producing and marketing PRM are already registered in the professional operators' registers of that Regulation.</p> <hr/> <p>17 Regulation (EU) 2016/2031 of the European Parliament and of the Council of 26 October 2016 on protective measures against pests of plants, amending Regulations (EU) No 228/2013, (EU) No 652/2014 and (EU) No 1143/2014 of the European Parliament and of the Council and repealing Council Directives 69/464/EEC, 74/647/EEC, 93/85/EEC, 98/57/EC, 2000/29/EC, 2006/91/EC and 2007/33/EC (OJ L 317, 23.11.2016, p. 4).</p>		
<p>(42) Specific obligations should be introduced for professional operators active in the area of the production and marketing of PRM, to ensure their accountability, more effective official controls and proper application of this Regulation.</p>		
<p><u>(42a) To minimise as much as possible the administrative burden of professional operators exclusively marketing to non-professional users, organisations and networks marketing PRM for the conservation of plant genetic resources or farmers who exchange seed in kind, certain</u></p>		

Presidency revised text	Drafting suggestions	Comments
<p><u>exceptions to the obligations of professional operators should be introduced, taking into account the proportionality of the obligation concerned in relation to the burden of the operator and the importance of that obligation in relation to the scope of the Regulation.</u></p>		
<p>(43) Experience has shown that the reliability and quality of the marketed PRM can be jeopardised where it is impossible to trace material not complying with the applicable standards. It is therefore necessary to establish a comprehensive traceability system allowing withdrawals from the market or the submission of information to users of PRM or competent authorities. For that reason, the keeping of information and records on transfers from and to professional users should be mandatory for the professional operators. However, such record keeping is not appropriate for marketing in retail.</p>		
<p>(44) It is important to ensure that, as a general rule, all PRM of the genera and species within the scope of this Regulation are subject to the registration of the variety to which that PRM belongs, the description of the variety and the corresponding rules.</p>		
<p>(45) <u>All Member States shall establish Varieties should be registered in a national variety</u></p>		

Presidency revised text	Drafting suggestions	Comments
<p>register, <u>containing all registered varieties and varieties for which an application for registration have been submitted</u>, to ensure informed choices by their users and more effective official controls.</p>		
<p>(46) The national variety register should include two types of varieties: varieties registered on the basis of an official description, if they fulfil the requirements of distinctness, uniformity and stability (‘DUS’), and varieties registered on the basis of an officially recognised description in the case of conservation <u>or local</u> varieties. The existence of those two different descriptions is necessary to separate the two categories of varieties, whereby the first one is based on DUS testing results, while the other one is based on historical data concerning the use of the variety and practical experience. In addition, such approach can offer the necessary information about the characteristics of the varieties and their identity.</p>		
<p>(47) The registered varieties should be further notified by the competent authorities via the EU Plant Variety <u>an electronic Pportal</u> to the Union variety register, to ensure an overview of all varieties allowed for marketing in the Union.</p>		
<p>(48) Herbicide tolerant varieties are varieties that have been bred to be intentionally tolerant to</p>		

Presidency revised text	Drafting suggestions	Comments
<p>herbicides, in order to be cultivated in combination of <u>with</u> the use of those herbicides. If such cultivation is not done under appropriate conditions, it may lead to development of weeds resistant to those herbicides, spread of such resistance genes in the environment or to the need to increase of quantities of herbicides applied. As this Regulation aims to contribute to the sustainability of agricultural production, the competent authorities of Member States responsible for the registration of varieties should be able to subject the cultivation of those varieties in their territory to cultivation conditions appropriate for avoiding those undesirable effects. Moreover, where varieties have particular characteristics, other than tolerance to herbicides, that could have undesirable agronomic effects, they should also be subject to cultivation conditions, in order to address those agronomic effects. Those conditions should apply to the cultivation of those varieties for any purpose, including food, feed and other products, and not only for purposes of production and marketing of PRM. This is necessary to achieve the objectives of this Regulation to contribute to sustainable agricultural production beyond the stage of production and marketing of PRM.</p>		
<p>(49) In order to contribute to the sustainability of agricultural production and serve economic, environmental and broader societal needs, new varieties of all genera or species of vine, potato and</p>		

Presidency revised text	Drafting suggestions	Comments
<p><u>of agricultural plants, except for varieties used exclusively for turf grass purposes,</u> should show an improvement compared to the other varieties of the same genera or species registered in the same national variety register, concerning certain aspects. Among those aspects are their yield, including yield stability and yield under low input conditions; tolerance/resistance to biotic stresses, including plant diseases caused by nematodes, fungi, bacteria, viruses, insects and other pests; tolerance/resistance to abiotic stresses, including adaptation to climate change conditions; more efficient use of natural resources, such as water and nutrients; reduced need for external inputs, such as plant protection products and fertilisers; characteristics that enhance the sustainability of storage, processing and distribution; and quality or nutritional characteristics; <u>and the ability to be cultivated in association with other species or varieties</u> ('value for sustainable cultivation and use'). For the purpose of deciding on the variety registration and in order to provide sufficient flexibility to register varieties with the most desirable characteristics, those aspects should be considered for a given variety as a whole.</p>		
<p>(50) As organic varieties suitable for organic production as defined in Article 3 of Regulation (EU) 2018/848 are characterised by a high level of genetic and phenotypical diversity between individual reproductive units, it is appropriate that</p>		

Presidency revised text	Drafting suggestions	Comments
<p>their registration is subject to adjusted requirements of DUS, and in particular as regards the requirements concerning uniformity. Furthermore, in order for that such varieties to be better adapted to the specific needs of organic production, their examination of the value for sustainable cultivation and use should be conducted under organic conditions.</p>		
<p>(51) For reasons of efficiency and reduction of the administrative burden, varieties that have been granted a plant variety right pursuant to Article 62 of Regulation (EC) No 2100/94, or pursuant to the legislation of a Member State, should be deemed to be distinct, uniform and stable and to have a suitable denomination for the purposes of this Regulation, <u>where the DUS testing was carried out by a suitable examination office.</u></p>		
<p><u>(51a) The registered variety shall have a suitable denomination to ensure the unique identification of the variety. That denomination should not cause confusion as to the identification of the variety or be misleading or cause offence in any way.</u></p>		
<p>(52) The procedure of variety registration should be precisely defined, in order to ensure legal certainty for the applicants and the competent authorities, and a level playing field for all</p>		

Presidency revised text	Drafting suggestions	Comments
<p>applicants. For this reason, rules should be set out concerning the submission, content, formal examination and date of submission of the applications, technical examinations, audit of the competent authority's premises and organisation <u>examination offices carrying out technical examinations</u>, additional rules on technical examination, confidentiality, provisional examination report and provisional official description, examination report and final official description, <u>examination of conservation and local varieties</u>, examination of the denomination of a variety and decision on the registration of a variety in the national variety register.</p>		
<p>(53) For reasons of efficiency and in order to reduce administrative burden for competent authorities and applicants, the competent authorities should register in their national variety registers all varieties officially accepted or registered, before the entry into force of this Regulation, in the catalogues, lists or registers established by their respective Member States pursuant to Directives <u>68/193/EEC</u>, 2002/53/EC, 2002/55/EC, <u>2008/62/EC</u>, 2008/90/EC <u>and 2009/145/EC</u> and 68/193/EEC. As those varieties are already marketed in the Union and used by farmers and other professional operators, they should not be subject to a new registration procedure.</p>		
<p><u>(53a) For the same reason, varieties listed in a national variety register that were not registered</u></p>		

Presidency revised text	Drafting suggestions	Comments
<p><u>pursuant to Directives 68/193/EEC, 2002/53/EC, 2002/55/EC, 2008/62/EC, 2008/90/EC and 2009/145/EC, but will be registered pursuant to this Regulation should be registered without applying the new registration procedure.</u></p>		
<p>(54) Rules should be set out concerning the technical examination of varieties, in order to conclude whether they are distinct, uniform and stable. Due to the importance of that examination for the variety breeding sector and the fact that it leads to the production of an official description, that technical examination should be carried out only by <u>suitable examination offices</u> the competent authority. <u>In addition, rules concerning technical examination of the value for sustainable cultivation and use for certain genera or species should be set out. That examination should be carried out by the competent authority.</u></p>		
<p>(55) However, there should be the possibility to carry out the technical examination for the satisfactory value for sustainable cultivation and use of a variety on the premises of the applicant and under the official supervision of the competent authority. This is necessary in order to ease the administrative burden, ensure the availability of testing facilities and reduce costs for the competent authorities. However, <u>it should be possible for</u> the competent authority should be in charge of the testing arrangements. Moreover, <u>to collaborate</u></p>		

Presidency revised text	Drafting suggestions	Comments
<p>with professional operators <u>natural or legal persons for the purpose of the technical examination.</u> involved in the breeding of new varieties, and on the basis of their co-operation with the competent authorities; <u>Those persons should have be proven qualified to carry out such examinations as they possessing the respective relevant expertise, knowledge and appropriate resources.</u></p>		
<p>(56) In order to ensure the credibility and high quality of the examinations on distinctness, uniformity and stability, the <u>examination offices carrying out the examination should be found suitable</u> premises of the competent authorities where they take place should be audited by the Community Plant Variety Office (‘CPVO’) <u>in accordance with the CPVO entrustment requirements. If no examination office in the Union has been found suitable, it should be possible to use suitable examination offices in a third country.</u> The premises of the applicants where the examination for the satisfactory value for sustainable cultivation and use takes place under official supervision, should be audited by the respective competent authorities, to ensure compliance with the applicable requirements.</p>		
<p><u>(56a) For reasons of legal certainty, a final decision on the registration of the variety should be adopted by the competent authority. Before that, the examination of the variety should be</u></p>		

Presidency revised text	Drafting suggestions	Comments
<p><u>concluded and an examination report and an official description, or in the case of conservation or local varieties an officially recognised description, should be issued. In addition, a decision on the denomination of the variety should be adopted after consulting the CPVO.</u></p>		
<p>(57) The period of the registration of a variety should be 10 years, so as to encourage innovation in the breeding sector, and the removal from the market of old varieties and their replacement by new ones. However, that period should be 30 years for <u>conservation and local varieties, due to the longterm purpose of conservation but in order to still ensure relevance, as well as for</u> varieties of genera or species of fruit plants and vine, due to the longer time required for the completion of the productive cycle of those genera or species.</p>		
<p>(58) Upon a request of a <u>Any interested natural or legal person, with a legitimate interest should have the possibility to apply for renewal</u> of the period of registration of a variety should be subject to renewal, in order to allow for the continuation of marketing of certain varieties if a need is established and they still fulfil applicable requirements. <u>Rules should also be set out on the termination of the registration, for example if no application for renewal has been submitted or if the conditions for registration are no longer fulfilled.</u></p>		

Presidency revised text	Drafting suggestions	Comments
<p>(59) Rules should be set out concerning variety maintenance in accordance with accepted practices. This is necessary to ensure the varietal identity during the period of its registration, which can only be ensured if the maintenance of the respective variety is carried out by the applicant, or other natural or legal persons in the Union or in a third country notified by the applicant to the competent authority, pursuant to certain requirements and subject to official controls by the competent authorities.</p>		
<p>(60) Rules should be set out concerning the content of the national variety registers and the Union variety register, and the keeping of samples or living plants of the registered varieties (‘official sample’ or ‘standard sample’) which is a living description of the variety. This is important to ensure accessibility to the necessary information on the variety, its identification during the period of its registration and the availability of standard samples for control plot testing in the context of PRM certification.</p>		
<p><u>(60a) Member States should be required to submit to the Commission on a regular basis specified information on, inter alia, quantities of produced PRM and number of professional operators. That information is important for being able to evaluate the effects of this Regulation and to identify needs for</u></p>		

Presidency revised text	Drafting suggestions	Comments
<u>amendments in the future to better achieve the purpose of this Regulation.</u>		
<u>(60b) Member States should be able to impose, as appropriate, corrective actions or penalties on professional operators in cases of non-compliance with, or infringements of, the rules of this Regulation. The aim of those corrective actions or penalties is to make sure that the PRM concerned will comply with the requirements of this Regulation and that professional operators do not acquire economic advantage due to fraud or circumvention of the rules.</u>		
<u>(60c) It should be possible for Member States to collect fees for their acts performed in relation to this Regulation. Those fees should be set in order to cover the costs of the competent authority for performing the activity. The amount of those fees should be calculated in accordance with the rules on fees in Regulation (EU) 2017/625.</u>		
(61) The PRM marketing Directives should be repealed, as this Regulation replaces them. As a consequence, Regulation (EU) 2016/2031 should be amended to remove references to those Directives and to ensure that Regulated Non-Quarantine Pests ('RNQPs') are exclusively regulated by that Regulation <u>and that all types of PRM are covered.</u>		

Presidency revised text	Drafting suggestions	Comments
<p>(62) Regulation (EU) 2017/625 of the European Parliament and of the Council¹⁸ should be amended to include in its scope the production and marketing of PRM in line with this Regulation. This is important in order to guarantee a uniform approach as regards official controls for the entire plant production and food chain, since Regulation (EU) 2017/625 also applies to the scope of Regulation (EU) 2016/2031, and Regulation (EU) 2018/848 of the European Parliament and of the Council¹⁹.</p> <hr/> <p>18 Regulation (EU) 2017/625 of the European Parliament and of the Council of 15 March 2017 on official controls and other official activities performed to ensure the application of food and feed law, rules on animal health and welfare, plant health and plant protection products, amending Regulations (EC) No 999/2001, (EC) No 396/2005, (EC) No 1069/2009, (EC) No 1107/2009, (EU) No 1151/2012, (EU) No 652/2014, (EU) 2016/429 and (EU) 2016/2031 of the European Parliament and of the Council, Council Regulations (EC) No 1/2005 and (EC) No 1099/2009 and Council Directives 98/58/EC, 1999/74/EC, 2007/43/EC, 2008/119/EC and 2008/120/EC, and repealing Regulations (EC) No 854/2004 and (EC) No 882/2004 of the European Parliament and of the Council, Council Directives 89/608/EEC, 89/662/EEC, 90/425/EEC, 91/496/EEC, 96/23/EC, 96/93/EC and 97/78/EC and Council Decision 92/438/EEC (Official Controls Regulation) (OJ L 95, 7.4.2017, p. 1).</p> <p>19 Regulation (EU) 2018/848 of the European Parliament and of the Council of 30 May 2018 on organic production and labelling of organic products</p>		

Presidency revised text	Drafting suggestions	Comments
and repealing Council Regulation (EC) No 834/2007 (OJ L 150, 14.6.2018, p. 1).		
(63) In this respect, the Commission should be empowered to adopt specific rules on official controls and on actions taken by the competent authorities in relation to PRM, in particular for laying down rules for the performance of official controls on PRM for verifying compliance with Union rules, for the import into, and marketing within, the Union of PRM, and on the activities of operators during the production of PRM.		
<u>(63a) However, Regulation (EU) 2017/625 should not apply in its entirety to activities relating to variety registration in this Regulation. Furthermore, derogations should be made in this Regulation from specific Articles of Regulation (EU) 2017/625. This includes in particular those provisions of Regulation (EU) 2017/625 that impose new administrative burdens on the competent authorities that would be disproportionate to achieving the objectives of this Regulation.</u>		
(64) Regulation (EU) 2018/848 should be amended to align the definitions of ‘plant reproductive material’ and ‘heterogeneous material’ with the definitions provided for by this Regulation. Moreover, the empowerment for the Commission to adopt specific provisions for the		

Presidency revised text	Drafting suggestions	Comments
marketing of PRM of organic heterogeneous material should be excluded from Regulation (EU) 2018/848, as all rules concerning the production and marketing of PRM should be set out in this Regulation for reasons of legal clarity.		
(65) In order to adapt the list of genera and species of PRM, subject to within the scope of this Regulation, to the developments related to the significance of the area and the value of production, food and #feed security and the number of Member States where it is cultivated of cultivation , the power to adopt acts in accordance with Article 290 TFEU should be delegated to the Commission in respect of amending that list.		
<u>(65a) In order to adapt the list of genera and species of PRM that can only be produced and marketed as pre-basic, basic or certified seed or material within the scope of this Regulation where there is a need for higher quality guarantees and the costs of the relevant certification activities are proportionate, the power to adopt acts in accordance with Article 290 TFEU should be delegated to the Commission in respect of amending that list.</u>		
(66) In order to adapt the rules on the production and marketing of PRM to the technical and scientific developments and the applicable international standards, the power to adopt acts in accordance with Article 290 TFEU should be		

Presidency revised text	Drafting suggestions	Comments
delegated to the Commission in respect of amending the requirements of this Regulation concerning the production and marketing of pre-basic, basic, certified and standard <u>seed and material and seeds.</u>		
<u>(66a) In order to confirm the compliance of professional operators with the conditions to carry out certain activities regarding certification under official supervision, the power to adopt acts in accordance with Article 290 TFEU should be delegated to the Commission in respect of specific actions to taken by the competent authorities.</u>		
<u>(66b) In order to have a harmonised approach, the power to adopt acts in accordance with Article 290 TFEU should be delegated to the Commission in respect of the data and technical arrangements necessary for the issuance of the official label for pre-basic, basic and certified PRM and of the operator’s label for standard PRM.</u>		
<u>(66c) In order to ensure harmonised rules on the production and marketing of preservation mixtures, the power to adopt acts in accordance with Article 290 TFEU should be delegated to the Commission in respect of further requirements for such mixtures concerning the designation of the region of origin, the use of certain species, the authorisation of professional</u>		

Presidency revised text	Drafting suggestions	Comments
<u>operators, the production by direct collection or by multiplication, the activities carried out by the competent authority and the conditions for production and marketing of seeds intended for mixtures.</u>		
(67) — In order to adapt the rules on the production and marketing of PRM of heterogeneous material to the technical and scientific developments, and take into account the experience gained from the application of the rules of this Regulation, the power to adopt acts in accordance with Article 290 TFEU should be delegated to the Commission in respect of amending the requirements concerning the production and marketing of heterogeneous material.		
<u>(67a) In order to adapt the list of genera and species of PRM that can be produced and marketed as commercial seed to the relevant breeding and economic developments, the power to adopt acts in accordance with Article 290 TFEU should be delegated to the Commission in respect of amending that list.</u>		
<u>(67b) In order to address situations where a registration of certain categories of professional operators would constitute a disproportionate administrative burden on them, the power to adopt acts in accordance with Article 290 TFEU should be delegated to the Commission in respect</u>		

Presidency revised text	Drafting suggestions	Comments
<u>of extending the list of professional operators who are not required to be registered.</u>		
(68) In order to adapt the content of variety registers to the technical developments and follow up to the experience gained from variety registration, the power to adopt acts in accordance with Article 290 TFEU should be delegated to the Commission in respect of amending the requirements concerning that content.		
<u>(68a) In order to adapt the technical requirements for the registration of selected clones and polyclonal material to the scientific and technical developments and to the applicable international standards, the power to adopt acts in accordance with Article 290 TFEU should be delegated to the Commission in respect of amending those requirements.</u>		
(69) — In order to adapt the cultivation of varieties to the development of technical and scientific knowledge, the power to adopt acts in accordance with Article 290 TFEU should be delegated to the Commission in respect of adopting conditions of cultivation of varieties that are herbicide-tolerant or have other characteristics that could lead to undesirable agronomic effects. Those conditions should include measures in the field, such as crop rotation; monitoring measures; the notification of those measures by Member States to the Commission and the other Member States;		

Presidency revised text	Drafting suggestions	Comments
<p>reporting by professional operators to the competent authorities concerning the application of those measures; and the indications of those conditions in the national variety registers.</p>		
<p>(70) — In order to adapt testing and requirements for the sustainable value of cultivation and use requirements to the potential technical and scientific developments, and the possible development of international standards, the power to adopt acts in accordance with Article 290 TFEU should be delegated to the Commission in respect of supplementing this Regulation with certain elements. Those consist of the necessary methodologies for the growing trials to be carried out with a view to assessing, and adopting further requirements for, sustainable value of cultivation and use for certain genera or species.</p>		
<p><u>(73, 70a) In order to adapt the provisions of this Regulation concerning the examination for sustainable cultivation and use to the technical or scientific developments, and to any new Union policies or rules on sustainable agriculture, the power to adopt acts in accordance with Article 290 TFEU should be delegated to the Commission in respect of supplementing this Regulation by establishing the minimum requirements for assessing the characteristics examined and the evaluation and the reporting of the results of this examination.</u></p>		

Presidency revised text	Drafting suggestions	Comments
<p>(71) In order to adapt the set out specific criteria concerning the suitability of rules on a variety denomination to the technical and scientific developments, and follow up on the experience gained from the application of those rules, the power to adopt acts in accordance with Article 290 TFEU should be delegated to the Commission in respect of supplementing this Regulation by setting out specific criteria concerning the suitability of variety denominations <u>the relation to trademarks, the relation to geographical indications or designation of origin for agricultural products, the written consent of holdes of prior rights to remove impediments to the suitability of a denomination, the use of codes, the definition of closely related species and the determination of misleading, offensive or confusing denominations.</u></p>	<p style="text-align: center; opacity: 0.5; font-size: 48px; transform: rotate(-45deg);">PUBLIC</p>

<p>(80) In order to ensure uniform conditions for the implementation of this Regulation <u>concerning mixtures of seed, and to follow up on any technical and scientific developments and</u> practical experience gained by the application of the respective rules, implementing powers should be conferred to the Commission for adopting specific provisions concerning mixtures of seeds <u>mixing equipment and procedure, sealing, packaging and labelling, content, size, colour and form of the label, applicable use and denomination of mixtures.</u></p>		
<p><u>(80a) In order to ensure uniform conditions for the implementation of this Regulation concerning specific requirements on packaging and sealing of preservation mixtures, implementing powers should be conferred to the Commission for adopting those requirements.</u></p>		
<p>(81) In order to ensure uniform conditions for the implementation of this Regulation with respect to retail marketing of PRM <u>of fruit and vegetable plant species</u>, and make the marketing of PRM as practical and suitable for each species as possible, implementing powers should be conferred to the Commission for adopting rules concerning the size, form, sealing and handling requirements of <u>individual plants and</u> the small packages for seeds and the packages and bundles for other PRM marketed to final <u>non-professional</u> users.</p>		

Presidency revised text	Drafting suggestions	Comments
<p>(82) In order to ensure uniform conditions for the implementation of this Regulation in relation and to addressing urgent temporary supply difficulties of PRM, implementing powers should be conferred to the Commission for authorising, in the case of temporary difficulties in the supply of PRM, for a maximum period of 1 year 18 months, the marketing of PRM of the categories of pre-basic, basic or, certified or standard seed or material or seed subject to less stringent requirements, or to derogate from the requirement to belong to a variety, and with respect to repealing and amending that authorisation.</p>		
<p>(83) In order to ensure uniform conditions for the implementation of this Regulation, and ensure some flexibility to for Member States to adopt more stringent national measures, adapted to their agro-climatic conditions and including higher quality standards, implementing powers should be conferred to the Commission for authorising the Member States to adopt, with regards to production and marketing of PRM, more stringent such requirements for the production or and marketing requirements of PRM, provided that those measures correspond to market demands, specific production conditions or agro-climatic conditions of that Member State, in all or part of the territory of the Member State concerned, and with respect to repealing or amending such measures adopted pursuant to the PRM marketing Directives.</p>

<p><u>conferred to the Commission to adopt immediately applicable implementing acts to, in duly justified cases of urgency, address a serious risk to human health.</u></p>		
<p>(85) In order to ensure uniform conditions for the implementation of this Regulation, implementing powers should be conferred to the Commission for deciding on the organisation of temporary experiments to seek improved alternatives to the scope and certain provisions of this Regulation.</p>		
<p>(86) In order to ensure uniform conditions for the implementation of this Regulation with regard to the import of PRM, and ensure compliance of the third country requirements with the equivalent Union requirements, implementing powers should be conferred to the Commission with respect to recognising whether PRM of specific genera, species or categories produced in a third country, or particular areas of a third country, fulfils requirements equivalent to those applicable to PRM produced and marketed in the Union, in order to be imported.</p>		
<p>(87) In order to ensure uniform conditions for the implementation of this Regulation and to ensure appropriate maintenance of the registered varieties in third countries too, implementing powers should be conferred to the Commission with respect to recognising that the controls on variety</p>

maintenance carried out in the third country afford the same guarantees as those set out in the Union.		
(88) In order to ensure uniform conditions for the implementation of this Regulation, and to adapt its provisions to the evolving applicable <u>taking into account the protocols established by the CPVO, the applicable guidelines</u> of the International Union for the Protection of new Varieties of Plants (UPOV) or <u>other relevant national</u> protocols established by the CPVO, and the relevant technical and scientific developments, implementing powers should be conferred to the Commission for adopting specific requirements concerning distinctness, uniformity and stability per genera or species of varieties <u>and the characteristics and information that the officially recognised description of the variety is to cover.</u>		
<u>(88a) In order to ensure uniform conditions for the implementation of this Regulation, implementing powers should be conferred to the Commission for specifying the elements of suitability of variety denominations laid own in this Regulation, taking into account any applicable international standards, as well as the relevant guidelines on variety denominations developed by the CPVO.</u>		
<u>(88b) In order to ensure uniform conditions for the implementation of this Regulation,</u>		

Presidency revised text	Drafting suggestions	Comments
<p><u>implementing powers should be conferred to the Commission for specifying the way in which competent authorities may collaborate with natural or legal persons for the purpose of the technical examination of distinctness, uniformity and stability and of the value for sustainable cultivation and use.</u></p>		
<p>(89) In order to ensure uniform conditions for the implementation of this Regulation, implementing powers should be conferred to the Commission for adopting specific rules as regards the size <u>and replacement</u> of the standard sample of registered varieties used for the official post controls of PRM, the rules for the renewal of those samples and the provision of those samples to other Member States <u>competent authorities.</u></p>		
<p><u>(89a) In order to ensure uniform conditions for the implementation of this Regulation, implementing powers should be conferred to the Commission for specifying the technical formats for Member States' reporting on the functioning of the PRM production and marketing system.</u></p>		
<p>(90) Since the objective of this Regulation, namely to ensure a harmonised approach with regard to the production and marketing of PRM, cannot be sufficiently achieved by the Member States but can rather, by reason of its effects, complexity and international character, be better achieved at Union level, the Union may adopt</p>

<p>measures, in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty on European Union. In accordance with the principle of proportionality, as set out in that Article, this Regulation does not exceed what is necessary in order to achieve that objective. In this view, and as necessary, it introduces derogations or specific requirements for certain types of PRM and professional operators.</p>		
<p>(91) This Regulation should apply from 3 5 years after its entry into force, in order to allow the competent authorities and the professional operators to adapt to its provisions and also to provide the necessary time for the adoption of the respective delegated and implementing acts. The rules concerning the satisfactory value for sustainable cultivation and use of varieties of vegetables and fruit plants should however apply from 5 years after its entry into force. That additional time period is needed for the competent authorities and professional operators to make the necessary preparations and carry out the first tests in the fields complying with those new rules.</p>		
<p>HAVE ADOPTED THIS REGULATION:</p>
