EL COMMENTS

TEN-E REVISION PROPOSAL REGARDING ARTICLE 1, ANNEX I AND ANNEX II

CHAPTER I

GENERAL PROVISIONS

Article 1

Subject matter

- This Regulation lays down guidelines for the timely development and interoperability of the priority corridors and areas of trans-European energy infrastructure set out in Annex I ('energy infrastructure priority corridors and areas') that contribute to the Union's 2030 climate and energy targets and to the pathway towards the climate neutrality objective by 2050 and to ensure interconnections, energy security, market integration and competition for all Members and energy at a price that is affordable for households and companies.
- 2. In particular, this Regulation:

(a) addresses the identification of projects of common interest necessary to implement priority corridors and areas falling under the energy infrastructure categories set out in Annex II ('energy infrastructure categories');

(b) addresses the identification of projects of mutual interest.

(c) facilitates the timely implementation of projects of common interest and projects of mutual interest by streamlining, coordinating more closely, and accelerating permit granting processes and by enhancing transparency and public participation;

(d) provides rules for the cross-border allocation of costs and risk-related incentives for projects of common interest and projects of mutual interest;

(e) determines the conditions and the criteria for eligibility of projects of common interest and projects of mutual interest for Union financial assistance;

Commented [15]: Greece agrees with the fact that the amended Regulation focuses on the 2030 and 2050 targets and accepts the relevant modifications. We also agree with the Presidency's compromise proposal and the inclusion of the achievement of broader energy policy objectives such as energy security, market integration competition, energy prices affordability.

ANNEX I

ENERGY INFRASTRUCTURE PRIORITY CORRIDORS AND AREAS

1. PRIORITY ELECTRICITY CORRIDORS

(1) North-South electricity interconnections in Western Europe ('NSI West Electricity'): interconnections between Member States of the region and with the Mediterranean area including the Iberian peninsula, notably to integrate electricity from renewable energy sources and reinforce internal grid infrastructures to foster market integration in the region.

Member States concerned: Austria, Belgium, Denmark, France, Germany, Ireland, Italy, Luxembourg, Netherlands, Malta, Portugal and Spain;

(2) North-South electricity interconnections in Central Eastern and South Eastern Europe ('NSI East Electricity'): interconnections and internal lines in North-South and East-West directions to complete the internal market and integrate generation from renewable energy sources.

Member States concerned: Austria, Bulgaria, Croatia, Czech Republic, Cyprus, Germany, Greece, Hungary, Italy, Poland, Romania, Slovakia and Slovenia;

(3) Baltic Energy Market Interconnection Plan in electricity ('BEMIP Electricity'): interconnections between Member States and internal lines in the Baltic region, to foster market integration while integrating growing shares of renewable energy in the region.

Member States concerned: Denmark, Estonia, Finland, Germany, Latvia, Lithuania, Poland and Sweden.

2. PRIORITY OFFSHORE GRID CORRIDORS

(4) Northern Seas offshore grid ('NSOG'): integrated offshore electricity grid development and the related interconnectors in the North Sea, the Irish Sea, the Celtic Sea, the English Channel and neighbouring waters to transport electricity from renewable offshore energy sources to centres of consumption and storage and to increase cross-border electricity exchange.

| 6864/21 | | CC/st | 3 |
|---------|----------|--------|----|
| ANNEX | TREE.2.B | LIMITE | EN |

Member States concerned: Belgium, Denmark, France, Germany, Ireland, Luxemburg, the Netherlands and Sweden;

(5) Baltic Energy Market Interconnection Plan offshore grid ('BEMIP offshore'): integrated offshore electricity grid development and the related interconnectors in the Baltic Sea and neighbouring waters to transport electricity from renewable offshore energy sources to centres of consumption and storage and to increase cross-border electricity exchange.

Member States concerned: Denmark, Estonia, Finland, Germany, Latvia, Lithuania, Poland and Sweden:

(6) South and West East offshore grid: integrated offshore electricity grid development and the related interconnectors in the Mediterranean Sea (including Cadiz Gulf), and neighbouring waters to transport electricity from renewable offshore energy sources to centres of consumption and storage and to increase cross-border electricity exchange.

Member States concerned: France, Greece, Italy, Malta, Portugal, and Spain;

(7) South and East West offshore grid: integrated offshore electricity grid development and the related interconnectors in the Mediterranean Sea, Black Sea and neighbouring waters to transport electricity from renewable offshore energy sources to centres of consumption and storage and to increase cross-border electricity exchange;

Member States concerned: Bulgaria, Cyprus, Croatia, Greece, Italy, Romania and Slovenia.

(8) Atlantic offshore grid: integrated offshore electricity grid development and the related interconnectors in the North Atlantic Ocean waters to transport electricity from renewable offshore energy sources to centres of consumption and storage and to increase cross-border electricity exchange.

Member States concerned: France, Ireland, Portugal and Spain.

| 6864/21 | | CC/st | 4 |
|---------|----------|--------|----|
| ANNEX | TREE.2.B | LIMITE | EN |

3. PRIORITY CORRIDORS FOR HYDROGEN AND ELECTROLYSERS

(9) Hydrogen interconnections in Western Europe ('HI West'): hydrogen infrastructure including the repurposing of gas infrastructure including the transitional use of blending with gas, the repurposing of gas infrastructure or any other specific solutions for disadvantaged, less connected, peripheral or isolated regions and Member States, such as islands, enabling the emergence of an integrated hydrogen backbone, directly or indirectly (including through third countries), connecting the countries of the region and addressing their specific infrastructure needs for hydrogen supporting the emergence of an EU-wide network for hydrogen transport.

Power to gas facilities including Electrolysers: supporting the deployment of power-to-gas applications aiming to enable greenhouse gas reductions and contributing to secure, efficient and reliable system operation and smart energy system integration. Member States concerned: Austria, Belgium, Czech Republic, Denmark, France, Germany, Ireland, Italy, Luxembourg, Malta, the Netherlands, Portugal, and Spain;

(10) Hydrogen interconnections in Central Eastern and South Eastern Europe ('HI East'): hydrogen infrastructure including the repurposing of gas infrastructure including the transitional use of blending with gas, the repurposing of gas infrastructure or any other specific solutions for disadvantaged, less connected, peripheral or isolated regions and Member States, such as islands, enabling the emergence of an integrated hydrogen backbone, directly or indirectly (including through third countries), connecting the countries of the region and addressing their specific infrastructure needs for hydrogen supporting the emergence of an EU-wide network for hydrogen transport.

Power to gas facilities including Electrolysers: supporting the deployment of power-to-gas applications aiming to enable greenhouse gas reductions and contributing to secure, efficient and reliable system operation and smart energy system integration. Member States concerned: Austria, Bulgaria, Croatia, Cyprus, Czech Republic, Germany, Greece, Hungary, Italy, Poland, Romania, Slovakia and Slovenia;

(11) Baltic Energy Market Interconnection Plan in hydrogen ('BEMIP Hydrogen'): hydrogen infrastructure including the repurposing of gas infrastructure including the transitional use of blending with gas, the repurposing of gas infrastructure or any other specific solutions for disadvantaged, less connected, peripheral or isolated regions and Member States, such as islands, enabling the emergence of an integrated hydrogen backbone, directly or indirectly (including

| 6864/21 | | CC/st | 5 |
|---------|----------|--------|----|
| ANNEX | TREE.2.B | LIMITE | EN |

through third countries), connecting the countries of the region and addressing their specific infrastructure needs for hydrogen supporting the emergence of an EU-wide network for hydrogen transport.

Power to gas facilities including Electrolysers: supporting the deployment of power-to-gas applications aiming to enable greenhouse gas reductions and contributing to secure, efficient and reliable system operation and smart energy system integration. Member States concerned: Denmark, Estonia, Finland, Germany, Latvia, Lithuania, Poland and Sweden.

4. PRIORITY THEMATIC AREAS

(12) Smart electricity grids deployment: adoption of smart grid technologies across the Union to efficiently integrate the behaviour and actions of all users connected to the electricity network, in particular the generation of large amounts of electricity from renewable or distributed energy sources and demand response by consumers.

Member States concerned: all;

(13) Cross-border carbon dioxide network: development of carbon dioxide transport and storage infrastructure between Member States_ in view of the deployment of carbon dioxide capture and storage and enabling CO2 use including for synthetic fuel gases.

Member States concerned: all;

(14) Smart gas grids: Adoption of smart gas grid technologies across the Union to efficiently integrate a plurality of renewable and low-carbon gas sources into the gas network, support the uptake of innovative solutions for network management and facilitating smart energy sector integration and demand response.

Member States concerned: all.

(15) Gas grid deployment: development of selected gas infrastructure projects that have already been granted the PCI status according to the previous Regulation or can prove their advanced implementation level or mature stage or can contribute, for a transitional period until 2040, to the promotion of hydrogen and renewable and low carbon gases. In particular, due attention should be given to those Member States which are physically isolated from the EU gas network.

Commented [1999] : The full utilization of the existing natural gas infrastructure will be of vital importance for the energy system, to facilitate the development of renewable electricity and gas (biomethane, hydrogen and synthetic methane) and to ensure security of energy supply. In some case natural gas may be the most cost-effective solution for reducing emissions in the medium term, since it can curtail greenhouse gas emissions (60% less CO2 than coal) but also other pollutants such as NOx and SOx (up to 99% less than coal). It is our belief that existing gas PCIs, which are either being constructed or have entered the permit granting process or will be in a mature stage when the amended Regulation will be implemented should remain eligible for a transitional period until 2030, since all these projects contribute to the energy transition towards climate neutrality. This is in line with par. 14 of the European Council Conclusions (December 2020) which underlines the role of natural gas as a transition fuel. Furthermore, it reflects ACER's position on the amendment of the TEN-E Regulation, in which it proposes the "Introduction of a limited transitional period for natural gas PCIs that are already part of the list that is valid at the entry into force of the revised Regulation. Natural gas PCIs which are in the implementation phase could play an important role for market integration, security of supply and the transition to a low-carbon energy system in some Member States and regions of the EU. To remove their PCI status under the legislative proposal may create obstacles for their implementation, as the projects would be unable to benefit from accelerated permit granting, and possibly from regulatory and financial instruments under the TEN- E rules".

ANNEX II

ENERGY INFRASTRUCTURE CATEGORIES

The energy infrastructure categories to be developed in order to implement the energy infrastructure priorities listed in Annex I are the following:

(1) concerning electricity:

(a) any physical equipment designed to allow transport of electricity on the high and extra-high voltage level, including high-voltage overhead transmission lines, considering internal lines in MS (including connections between islands) and interconnections between MS if they have been designed for a voltage of 220 kV or more, and underground and submarine transmission cables, if they have been designed for a voltage of 150 kV or more;

(b) energy storage facilities in the electricity system on a permanent or temporary basis in above-ground or underground infrastructure or geological sites, provided they are directly connected to high-voltage transmission lines designed for a voltage of 110 kV or more;

(c) any equipment or installation essential for the systems referred to in points (a) and (b) to operate safely, securely and efficiently, including protection, monitoring and control systems at all voltage levels and substations;

(d) Smart electricity grids: regarding any equipment or installation, digital systems and components integrating ICT, through operational digital platforms, control systems and sensor technologies both at transmission and medium voltage distribution level, aiming at a more efficient and intelligent electricity transmission and distribution network, increased capacity to integrate new forms of generation, storage and consumption and facilitating new business models and market structures;

(e) any equipment or installation falling under category referred to in point (a) having dual functionality: interconnection and offshore grid connection system from the offshore generation sites to two or more Member States and third countries participating in projects of common interest and projects of mutual interest_including landlocked countries, as well as any offshore adjacent equipment or installation essential to operate safely, securely and efficiently, including protection, monitoring and control systems, and necessary substations if they also ensure technology interoperability inter alia interface compatibility between different technologies, ('offshore grids for renewable energy')._And includes the onshore prolongation of this equipment and the domestic grid reinforcement necessary to ensure an adequate and reliable transmission grid and to supply electricity generated offshore to landlocked countries.

TREE.2.B

(2) concerning smart gas grids:

any of the following equipment or installation aiming at enabling and facilitating the integration <u>and blending of</u> a plurality of renewable and low-carbon gases (including <u>biogas</u> biomethane, <u>synthetic gas</u> or hydrogen) into the gas network: digital systems and components integrating ICT, control systems and sensor technologies to enable the interactive and intelligent monitoring, metering, quality control and management of gas production, transmission, distribution_storage and consumption within a gas network. Furthermore, such projects may also include <u>connections from renewable and low-carbon gases production units into the transmission and distribution grid</u>, equipment to enable reverse flows from the distribution to the transmission level <u>as well as from pipelines of different capacities</u> and related necessary upgrades to the existing network <u>such as upgrades</u> <u>of various gas infrastructure parts to repurpose the grid to be fully compatible to transport pure hydrogen or to retrofit the existing network to be fully <u>compatible to transport blends of hydrogen and methane</u></u>

(3) concerning hydrogen:

(a) transmission pipelines for the transport of hydrogen <u>and transitional blending</u> <u>with natural gas</u>, giving access to multiple network users on a transparent and nondiscriminatory basis, which mainly contains high-pressure hydrogen pipelines,;

(b) storage facilities connected to the high-pressure hydrogen pipelines <u>and</u> <u>pipelines that transfer for a transitional period blending of hydrogen and</u> <u>natural gas</u> referred to in point (a);

(c) reception, storage and regasification or decompression facilities for liquefied hydrogen or <u>for a transitional period liquefied</u> hydrogen <u>blended with liquefied</u> natural gas and embedded in other chemical substances with the objective of injecting the hydrogen<u>or its blending with natural gas</u>, where applicable, into the grid;

(d) any equipment or installation essential for the hydrogen system to operate safely, securely and efficiently or to enable bi-directional capacity, including compressor stations.

e) any equipment or installation allowing for hydrogen or hydrogen-derived fuels use in the transport sector within the TEN-E core network.

(f) steam methane reforming (SMR) installations, combined with CCS/CCUS and methane pyrolysis installations.

Any of the assets listed in points (a), (b), (c), and (d) may be newly constructed assets or dedicated hydrogen assets converted<u>/ repurposed</u> from natural gas to <u>hydrogen</u>, or a combination of the two. For the assets listed in points (a), (b), (c), and (d), Member States may allow for repurposing of gas infrastructure which

| 6864/21 | | CC/st | 9 |
|---------|----------|--------|----|
| ANNEX | TREE.2.B | LIMITE | EN |

<u>is already under development or planning, including those projects having been</u> <u>granted a PCI status.</u>

During a transitional period, repurposed gas assets could be used for transport or storage of higher blends of hydrogen with natural gas.

Where they involve newly constructed assets, they shall include an assessment of the hydrogen demand and be dimensioned to satisfy this demand without creating overcapacity.

Commented I: We would prefer clear wording as the one proposed in other points above according to our joint comments with 9 MS (see document 2246/21)

| 6864/21 | | CC/st | 10 |
|---------|----------|--------|----|
| ANNEX | TREE.2.B | LIMITE | EN |

(4) concerning electrolyser facilities:

(a) electrolysers that: (i) have at least **20 50**-MW capacity, (ii) the production complies with the life cycle greenhouse gas emissions savings requirement of 70 % relative to a fossil fuel comparator of 94g CO₂e/MJLife cycle greenhouse gas emissions savings are calculated using the methodology referred to in Article 28(5) of Directive (EU) 2018/2001 or, alternatively, using ISO 14067 or ISO 14064-1. The life-cycle GHG emissions must include indirect emissions. Quantified life-cycle GHG emission savings are verified in line with Article 30 of Directive (EU) 2018/2001 where applicable, or by an independent third party, and (iii) have also a network-related function;

(b) related equipment.

(5) concerning carbon dioxide:

(a) dedicated pipelines, other than upstream pipeline network, used to transport carbon dioxide from more than one source, i.e. industrial installations (including power plants) that produce carbon dioxide gas from combustion or other chemical reactions involving fossil or non-fossil carbon-containing compounds, for the purpose of permanent geological storage of carbon dioxide pursuant to Directive 2009/31/EC of the European Parliament and of the Council¹;

(b) facilities for liquefaction and storage of carbon dioxide in view of its further transportation. This includes infrastructure within a geological formation used for the permanent geological storage of carbon dioxide pursuant to Directive 2009/31/EC and associated surface and injection facilities;

(c) any equipment or installation essential for the system in question to operate properly, securely and efficiently, including protection, monitoring and control systems.

(6) Concerning gas PCIs of the previous Regulation that can prove their advanced implementation level or permitting or mature stage or that can contribute to the promotion of hydrogen and renewable and low carbon gases:

(a) transmission pipelines for the transport of natural gas and biogas that form part of a

<u>network which mainly contains high-pressure pipelines, excluding high-pressure pipelines used</u> for upstream or local distribution of natural gas; and transmission pipelines which will physically end the isolation of a Member State from the EU gas network

(b) underground storage facilities connected to the above-mentioned high-pressure gas pipelines;

(c) reception, storage and regasification or decompression facilities for liquefied natural gas (LNG) or compressed natural gas (CNG);

¹ OJ L 140, 5.6.2009, p. 114.

| 6864/21 | | CC/st | 11 |
|---------|----------|--------|----|
| ANNEX | TREE.2.B | LIMITE | EN |

(d) any equipment or installation essential for the system to operate safely, securely and efficiently or to enable bi-directional capacity, including compressor stations;

Note from the Presidency: The <u>deadline</u> for comments on this proposal is March 18th.
