Presidency compromise text	Drafting Suggestions	Comments
Agency for the Cooperation of Energy		
Regulators ('ACER') in its April 2022		
assessment of EU wholesale electricity market		<b>.</b> * **
design <sup>1</sup> , this is mainly a consequence of the high		
price of gas, which is used as an input to		
generate electricity.		
(2) The escalation of the Russian military		
aggression against Ukraine, a Contracting Party		
of the Energy Community, and related		
international sanctions since February 2022		
have disrupted global energy markets,		
exacerbated the problem of high gas prices, and		
have had significant knock-on impacts on		
electricity prices. The Russian invasion of		
Ukraine has also caused uncertainty on the		
supply of other commodities, such as hard coal		
and crude oil, used by power-generating		

European Union Agency for the Cooperation of Energy Regulators, ACER's Final Assessment of the EU Wholesale Electricity Market Design, April 2022.

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
installations. This has resulted in substantial		
additional increases in the volatility of price		
levels of electricity.		
(3) In response to this situation, the		
Communication on Energy Prices presented by		
the Commission in October 2021 contained a		
toolbox of measures that the EU and its Member		
States may use to address the immediate impact		
of high energy prices on households and		
businesses (including income support, tax		
breaks, gas savings and storage measures) and		
to strengthen resilience against future price		
shocks. In its Communication of 8 March 2022		
entitled 'REPowerEU: Joint European Action		
for more affordable, secure and sustainable		
energy'1 the Commission outlined a series of		
additional measures to strengthen the toolbox		

Communication from the Commission to the European Parliament, the European Council, the Council, the European Economic and Social Committee and the Committee of the Regions - REPowerEU: Joint European Action for more affordable, secure and sustainable energy, COM/2022/108 final

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
and to respond to rising energy prices. On 23		
March 2022, the Commission also established a		
temporary State Aid regime to allow certain		
subsidies to soften the impact of high energy		
prices. <sup>1</sup>		
(4) On 18 May 2022 the Commission		
presented the REPowerEU plan <sup>2</sup> that introduced		
additional measures focusing on energy savings,		
diversification of energy supplies and		
accelerated roll-out of renewable energy aiming		
at ending the Union's dependency on Russian		
fossil fuels, including a proposal to increase the		
Union's 2030 target for renewables to 45%.		
Furthermore, the Communication on Short-		
Term Energy Market Interventions and Long-		

Communication from the Commission Temporary Crisis Framework for State Aid measures to support the economy following the aggression against Ukraine by Russia C 131 I/01, C/2022/1890.

<sup>&</sup>lt;sup>2</sup> Communication from the Commission to the European Parliament, the European Council, the Council, the European Economic and Social Committee and the Committee of the Regions - REPowerEU Plan, COM(2022)230.

<sup>&</sup>lt;sup>2</sup> Council Regulation (EU) 2022/2577 of 22 December 2022 laying down a framework to accelerate the deployment of renewable energy, OJ L 335, 29.12.2022.

Regulation (EU) 2018/1999 of the European Parliament and of the Council of 11 December 2018 on the Governance of the Energy Union and Climate Action, OJ L 328, 21.12.2018, p. 1; Directive (EU) 2018/2001 of the European Parliament and of the Council of 11 December 2018 on the promotion of the use of energy from renewable sources (recast), OJ L 328, 21.12.2018, p. 82; Directive (EU) 2018/2002 of the European Parliament and of the Council of 11 December 2018 amending Directive 2012/27/EU on energy efficiency, OJ L 328, 21.12.2018, p. 210; Regulation (EU) 2019/942 of the European Parliament and of the Council of 5 June 2019 establishing a European Union Agency for the Cooperation of Energy Regulators (recast), OJ L 158, 14.6.2019, p. 22; Regulation (EU) 2019/943 of the European Parliament and of the Council of 5 June 2019 on the internal market for electricity (recast), OJ L 158, 14.6.2019, p. 54; Directive (EU) 2019/944 of the European Parliament and of the Council of 5 June 2019 on common rules for the internal market for electricity (recast), OJ L 158, 14.6.2019, p. 125.

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
interconnectivity also ensures safer, more		
reliable and efficient operation of the power		
system.		
(7) The current electricity market design has		
also helped the emergence of new and		
innovative products, services and measures on		
retail electricity markets, supporting energy		
efficiency and renewable energy uptake and		
enhancing choice so as to help consumers		
reduce their energy bills also through small-		
scale generation installations and emerging		
services for providing demand response.		
Building on and seizing the potential of the		
digitalisation of the energy system, such as		
active participation by consumers, should be a		
key element of our future electricity markets		
and systems. At the same time, there is a need to		
respect consumer choices and allow consumers		
to benefit from a variety of contract offers.		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
(8) In the context of the energy crisis, the		
current electricity market design has however		
also revealed a number of important		
shortcomings linked to the impact of high and		
volatile fossil fuel prices on short-term		
electricity markets, which expose households		
and companies to significant price spikes with		
effects on their electricity bills.		
(9) A faster deployment of renewable		
energy and clean flexible technologies		
constitutes the most sustainable and cost-		
effective way of structurally reducing the		
demand for fossil fuels for electricity generation		
and for direct consumption through		
electrification and energy system integration.		
Thanks to their low operational costs, renewable		
sources can positively impact electricity prices		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

D	D C C	C
Presidency compromise text	Drafting Suggestions	Comments
across the Union and reduce direct consumption		
of fossil fuels.		
(10) The changes to the electricity market		
design should ensure that the benefits from		
rising renewable power deployment, and the		
energy transition as a whole, are brought to		
consumers, including the most vulnerable ones,		
and ultimately, shield them from energy crises		
and avoid more households falling into energy		
poverty trap. These should mitigate the impact		
of high fossil fuel prices, notably that of gas, on		
electricity prices, aiming to allow households		
and companies to reap the benefits of affordable		
and secure energy from sustainable renewable		
and low carbon sources in the longer term.		
(11) The reform of the electricity market		
design should benefit not just household		
consumers but also the competitiveness of the		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
Union's industries by facilitating their		
possibilities to make the clean tech investments		
they require to meet their net zero transition		
paths. The energy transition in the Union needs		
to be supported by a strong clean technology		
manufacturing basis. These reforms will support		
the affordable electrification of industry and the		
Union's position as a global leader in terms of		
research and innovation in clean energy		
technologies.		
(12) Well-functioning and efficient short-		
term markets are a key tool for the integration of		
renewable energy and flexibility sources in the		
market and facilitate energy system integration		
in a cost-effective manner.		
(13) Intraday markets are particularly		
important for the integration of variable		
renewable energy sources in the electricity		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
system at the least cost as they give the		
possibility to market participants to trade		
shortages or surplus of electricity closer to the		
time of delivery. Since variable renewable		
energy generators are only able to accurately		
estimate their production close to the delivery		
time, it is crucial for them to have a maximum		
of trading opportunities via access to a liquid		
market as close as possible to the time of		
delivery of the electricity.		
(14) It is therefore important for the intraday		
markets to adapt to the participation of variable		
renewable energy technologies such as solar and		
wind as well as to the participation of demand		
side response and energy storage. The liquidity		
of the intraday markets should be improved with		
the sharing of the order books between market		
operators within a bidding zone, also when the		
cross-zonal capacities are set to zero or after the		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
gate closure time of the intraday market.		
Furthermore, the gate closure time of the		
intraday market should be set closer to the time		
of delivery to maximize the opportunities for		
market participants to trade shortages and		
surplus of electricity and contribute to better		
integrating variable renewables in the electricity		
system.		
(15) In addition, the short-term electricity		
markets should ensure that small-scale		
flexibility service providers can participate by		
lowering the minimum bid size.		
(16) To ensure the efficient integration of		
electricity generated from variable renewable		
energy sources and to reduce the need for fossil-		
fuel based electricity generation in times when		
there is high demand for electricity combined		
with low levels of electricity generation from		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Prosidency compromise toyt Profting Suggestions Comments		Comments
Presidency compromise text	Drafting Suggestions	Comments
variable renewable energy sources, it should be		
possible for transmission system operators to		
design a peak shaving product enabling demand		
response to contribute to decreasing peaks of		
consumption in the electricity system at specific		
hours of the day. In addition, the peak shaving		
product should contribute to ensuring		
security of supply. The peak shaving product		
should contribute to maximize the integration of		
electricity produced from renewable sources		
into the system by shifting the electricity		
consumption to moments of the day with higher		
renewable electricity generation. As the peak		
shaving product aims to reduce and shift the		
electricity consumption, the scope of this		
product should be limited to demand-side		
response. The procurement of the peak shaving		
product should take place on a short notice so		
as to avoid booking demand response		
capacities that could otherwise participate in		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
wholesale electricity markets in normal		
conditions. Its activation should be limited in		
time to limit distortive effects on the		
electricity market. The procurement of the		
peak shaving product should in particular		
avoid any impact on the day-ahead price, and		
its activation should in such a way that it does		
not overlap with the activation of balancing		
products which aim at maintaining the		
frequency of the electricity system stable. In		
order to verify volumes of activated demand		
reduction, the transmission system operator		
should use a baseline reflecting the expected		
electricity consumption without the activation of		
the peak shaving product.		
(17) In order to be able to actively participate		
in the electricity markets and to provide their		
flexibility, consumers are progressively		
equipped with smart metering systems.		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
However, in a number of Member States the		
roll-out of smart metering systems is still slow.		
In those instances where smart metering systems		
are not yet installed and in instances where		
smart metering systems do not provide for the		
sufficient level of data granularity, transmission		
and distribution system operators should be able		
to use data from dedicated		
measurementmetering devices for the		
observability and settlement of flexibility		
services such as demand response and energy		
storage. Enabling the use of data from dedicated		
measurementmetering devices for observability		
and settlement should facilitate the active		
participation of the consumers in the market and		
the development of their demand response. The		
use of data from these dedicated		
measurementmetering devices should be		
accompanied by quality requirements relating to		
the data.		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
(18) This Regulation establishes a legal basis		
for processing of personal data in compliance		
with Article 6(1)(c) GDPR. Member States		
should ensure that all personal data protection		
principles and obligations laid down in the		
GDPR are met, including on data minimisation.		
Where the objective of this Directive can be		
achieved without processing of personal data,		
providers should rely on anonymised and		
aggregated data.

should be expanded. The single allocation	the detailed assessment.	
platform should offer trading of financial long-		
term transmission rights between the different		
bidding zones and the regional virtual hubs. The		
orders submitted by market participants for		
financial transmission rights shall be matched		
by a simultaneous allocation of long term cross		
zonal capacity. Such matching and allocation		
should be performed on a regular basis, to		
ensure enough liquidity and, hence, efficient		
hedging possibilities to market participants. The		
long-term transmission rights should be issued		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
with frequent maturities (ranging from month		
ahead to at least three years ahead), in order to		
be aligned with the typical hedging time horizon		
of market participants. The single allocation		
platform should be subject to monitoring and		
enforcement to ensure that it performs its tasks		
properly.		
(22) Network tariffs should incentivise		
transmission and distribution system operators		
to use flexibility services through further		
developing innovative solutions to optimise the		
existing grid and to procure flexibility services,		
in particular demand response or storage. For		
this purpose, network tariffs should be designed		
so as to take into account the operational and		
capital expenditures of system operators or an		
efficient combination of both so that they can		
operate the electricity system cost-efficiently.		
This would further contribute to integrating		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
renewables at the least cost for the electricity		
system and enable final customers to value their		
flexibility solutions.		
(23) Offshore renewable energy sources, such		
as offshore wind, ocean energy and floating		
photovoltaic, will play an instrumental role in		
building a power system largely based on		
renewables and in ensuring climate neutrality by		
2050. There are, however, substantial obstacles		
to their wider and efficient deployment		
preventing the massive scale up needed to		
achieve those objectives. Similar obstacles		
could arise for other offshore technologies in the		
future. These obstacles include investment risks		
associated with the unique topographical		
situation of offshore hybrid projects connected		
to more than one market. In order to reduce		
investment risk for these offshore project		
developers and to ensure that the projects in an		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
offshore bidding zone have full market access to		
the surrounding markets, transmission system		
operators should guarantee access of the		
offshore project to the capacity of the respective		
hybrid interconnector for all market time units.		
If the available transmission capacities are		
reduced to the extent that the full amount of		
electricity generation that the offshore project		
would have otherwise been able to export		
cannot be delivered to the market, the		
transmission system operator or operators		
responsible for the need to limit the capacity		
should, in future, be enabled to compensate the		
offshore project operator commensurately using		
congestion income. This compensation should		
only be related to the production capability		
available to the market, which may be weather		
dependent and excludes the outage and		
maintenance operations of the offshore project.		
The details, including the conditions under		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

<b>D</b>	D 6: 0	C
Presidency compromise text	Drafting Suggestions	Comments
which the measure may expire, are intended to		
be defined in an implementing Regulation.		
(24) In the day-ahead wholesale market, the		
power plants with lower marginal costs are		
dispatched first, but the price received by all		
market participants is set by the last plant		
needed to cover the demand, which is the plant		
with the highest marginal costs, when the		
markets clear. In this context, the energy crisis		
has shown that a surge in the price of gas and		
hard coal can translate into exceptional and		
lasting increases of the prices at which the gas		
and coal-fired generation facilities bid in the		
day-ahead wholesale market. That in turn has		
led to exceptionally high prices in the day-ahead		
market across the Union, as gas and coal-fired		
generation facilities are often the plants with the		
highest marginal costs needed to meet the		
demand for electricity.		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
(25) Given the role of the price in the day-		
ahead market as a reference for the price in		<del>-</del>
other wholesale electricity markets, and the fact		
that all market participants receive the clearing		
price, the technologies with significantly lower		
marginal costs have consistently recorded high		
revenues.		
(26) To reach the Union's decarbonisation		
targets and the objectives set out in REPowerEU		
to become more energy independent, the Union		
needs to accelerate the deployment of		
renewables at a much faster pace. In view of the		
investment needs required to achieve these		
goals, the market should ensure that a long-term		
price signal is established.		
(27) In this framework, Member States		
should strive to create the right market		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
	0 00	
conditions for long-term market-based		
instruments, such as power purchase agreements		
('PPAs'). PPAs are bilateral purchase		- 1
agreements between producers and buyers of		
electricity. They provide long-term price		
stability for the customer and the necessary		
certainty for the producer to take the investment		
decision. Nevertheless, only a handful of		
Member States have active PPA markets and		
buyers are typically limited to large companies,		
not least because PPAs face a set of barriers, in		
particular the difficulty to cover the risk of		
payment default from the buyer in these long-		
term agreements. Member States should take		
into consideration the need to create a dynamic		
PPA market when setting the policies to achieve		
the energy decarbonisation objectives set out in		
their integrated national energy and climate		
plans.		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
(28) According to Article 15(8) of Directive		
(EU) 2018/2001 of the European Parliament and		
of the Council, Member States are to assess the		
regulatory and administrative barriers to long-		
term renewables PPAs, and shall remove		
unjustified barriers to, and promote the uptake		
of, such agreements. In addition, Member States		
are to describe policies and measures facilitating		
the uptake of renewables PPAs in their		
integrated national energy and climate plans.		
Without prejudice to that obligation to report on		
the regulatory context affecting the PPA market,		
Member States should ensure that instruments to		
reduce the financial risks associated to the buyer		
defaulting on its long-term payment obligations		
in the framework of PPAs are accessible to		
companies that face entry barriers to the PPA		
market and are not in financial difficulty in line		
with Articles 107 and 108 TFEU. Member		
States could decide to set up a guarantee scheme		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
at market prices. Member States should include		
provisions to avoid lowering the liquidity in the		
electricity markets, such as by using financial		
PPAs. Member States should not provide		
support to PPAs that purchase generation from		
fossil fuels. While the default approach should		
be non-discrimination between consumers,		
Member States could decide to target these		
instruments to specific categories of consumers,		
applying objective and non-discriminatory		
criteria. In this framework, Member States		
should take into account the potential role of		
instruments provided at Union level, for		
instance by the European Investment Bank		
('EIB').		
(29) Member States have at their disposal		
several instruments to support the development		
of PPA markets when designing and allocating		
public support. Allowing renewable energy		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
project developers participating in a public		
support tender to reserve a share of the		
generation for sale through a PPA would		
contribute to nurture and grow PPA markets. In		
addition, as part of these tender evaluation		
Member States should endeavour to apply		
criteria to incentivise the access to the PPA		
market for actors that face entry barriers, such		
as small and medium-sized enterprises		
('SMEs'), giving preference to bidders		
presenting a commitment to sign a PPA for part		
of the project's generation from one or several		
potential buyers that face difficulties to access		
the PPA market.		
(30) Where Member States decide to support		
publicly financed new investments ("direct price		
support schemes") in low carbon, non-fossil fuel		
electricity generation to achieve the Union's		
decarbonisation objectives, those schemes		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
should be structured by way of two-way		
contracts for difference such as to include, in		
addition to a revenue guarantee, an upward		
limitation of the market revenues of the		
generation assets concerned. New investments		
for the generation of electricity should include		
investments in new power generating facilities,		
investments aimed at repowering existing power		
generating facilities, investments aimed at		
extending existing power generating facilities or		
at prolonging their lifetime.		
(31) Such two-way contracts for difference		
would ensure that revenues of producers		
stemming from new investments in electricity		
generation which benefit from public support		
become more independent from the volatile		
prices of fossil fuels-based generation which		
typically sets the price in the day-ahead market.		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
(32) However, to the extent that the		
limitation to set out direct price support schemes		
in the form of two-way contracts for difference		
narrows down the types of direct price support		
schemes that Member States can adopt as		
regards renewable energy sources, it should be		
limited to low carbon, non-fossil fuel		
technologies, with low and stable operational		
costs and to technologies which typically do not		
provide flexibility to the electricity system,		
while excluding technologies that are at early		
stages of their market deployment. This is		
necessary to ensure that the economic viability		
of generation technologies with high marginal		
costs is not jeopardised and to maintain the		
incentives of the technologies which can offer		
flexibility to the electricity system to bid in the		
electricity market based on their opportunity		
costs. In addition, the limitation to set out direct		
price support schemes in the form of two-way		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
contracts for difference should not apply to		
emerging technologies for which other types of		
direct price support schemes may be better		
placed to incentivise their uptake. The limitation		
should be without prejudice to the possible		
exemption for small-scale installations and		
demonstration projects pursuant to Article 4 (3)		
of (EU) 2018/2001 of the European Parliament		
and of the Council and consider the specificities		
of renewable energy communities in accordance		
with Article 22 (7) of that Directive.		
(33) In view of the need to provide regulatory		
certainty of producers, the obligation for		
Member States to apply direct price support		
schemes for the production of electricity in the		
form of two-way contracts for difference should		
apply only to new investments for the		
generation of electricity from the sources		
specified in the recital above.		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
(34) Thanks to the upward limitation of the		
market revenues direct price support schemes in		
the form of two-way contracts for difference		
should provide an additional source of revenues		
for Member States in periods of high energy		
prices. To further mitigate the impact of high		
electricity prices on the energy bills of		
consumers, Member States should ensure that		
the revenues collected from producers subject to		
direct price support schemes in the form of two-		
way contracts for difference are passed on to all		
final electricity customers, including		
households, SMEs and industrial consumers,		
based on their consumption. The redistribution		
of revenues should be done in a way that		
ensures that consumers are still to some extent		
exposed to the price signal, so that they reduce		
their consumption when the prices are high, or		
shift it to periods of lower prices (which are		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text Drafting Suggestions Comments		
	Druring suggestions	Comments
typically periods with a higher share of RES		
production). Member States should ensure that		
the level playing-field and competition between		- 1//
the different suppliers is not affected by the		
redistribution of revenues to the final electricity		
consumers.		
(25) F d M 1 G 4 1 11		
(35) Furthermore, Member States should		
ensure that the direct price support schemes,		
irrespective of their form, do not undermine the		
efficient, competitive and liquid functioning of		
the electricity markets, preserving the incentives		
of producers to react to market signals,		
including stop generating when electricity prices		
are below their operational costs, and of final		
customers to reduce consumption when		
electricity prices are high. Member States		
should ensure that support schemes do not		
constitute a barrier for the development of		
commercial contracts such as PPAs.		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
(36) Thus, two-way contracts for difference		
and power purchase agreements play		
complementary roles in advancing the energy		
transition and bringing the benefits of		
renewables and low carbon energy to		
consumers. Subject to the requirements set out		
in the present Regulation, Member States should		
be free to decide which instruments they use to		
achieve their decarbonisation objectives.		
Through PPAs, private investors contribute to		
additional renewable and low carbon energy		
deployment while locking low and stable		
electricity prices over the long-term. Likewise,		
through two-way contracts for difference, the		
same objective is achieved by public entities on		
behalf of consumers. Both instruments are		
necessary to achieve the Union's		
decarbonisation targets through renewable and		
low carbon energy deployment, while bringing		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
forward the benefits of low-cost electricity		
generation for consumers.		
(37) The accelerated deployment of		
renewables necessitates a growing availability		
of flexibility solutions to ensure their integration		
to the grid and to enable the electricity system		
and grid to adjust to the variability of electricity		
generation and consumption across different		
time horizons. Regulatory authorities should		
periodically assess the need for flexibility in the		
electricity system based on the input of		
transmission and distribution system operators.		
The assessment of the flexibility needs of the		
electricity system should take into account all		
existing and planned investments (including		
existing assets that are not yet connected to the		
grid) on sources of flexibility such as flexible		
electricity generation, interconnectors, demand		
side response, energy storage or the production		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
of renewable fuels, in view of the need to		
decarbonise the energy system. On this basis,		
Member States should define a national		
objective for non-fossil flexibility such as		
demand-side response and energy storage which		
should also be reflected in their integrated		
national energy and climate plans.		
(38) To achieve the national objective for		
non-fossil flexibility such as demand-side		
response and <b>energy</b> storage investment needs,		
Member States can design or redesign capacity		
mechanisms in order to create a green and		
flexible capacity mechanism. Member States		
that apply a capacity mechanism in line with the		
existing rules should promote the participation		
of non-fossil flexibility such as demand-side		
response and <b>energy</b> storage by introducing		
additional criteria or features in the design.		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
(39) To support environmental protection		
objectives the CO2 emissions' limit, set out in		
Article 22(4) of Regulation (EU) 2019/943 of		
the European Parliament and of the Council,		
should be seen as an upper limit. Therefore,		
Member States could set technical performance		
standards and CO2 emissions' limits that restrict		
participation in capacity mechanisms to flexible,		
fossil-free technologies in full alignment with		
the Guidelines on State aid for climate,		
environmental protection and energy <sup>1</sup> which		
encourage Member States to introduce green		
criteria in capacity mechanisms.		
(40) In addition, if Member States do not		
apply a capacity mechanism or if the additional		
criteria or features in the design of their capacity		
mechanism are insufficient to achieve national		

Communication from the Commission – Guidelines on State aid for climate, environmental protection and energy 2022 (OJ C 80, 18.2.2022, p. 1).

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise toyt  Duefting Suggestions  Comments		Comments
Presidency compromise text	Drafting Suggestions	Comments
objective for demand response and energy		
storage investment needs they could apply <b>non-</b>		
fossil flexibility support schemes consisting of		
payments for the available capacity of non-fossil		
flexibility such as demand-side response and		
energy storage.		
(41) The connection of new generation and		
demand installations, in particular renewable		
energy plants, often faces delays in grid		
connection procedures. One of the reasons for		
such delays is the lack of available grid capacity		
at the location chosen by the investor, which		
implies the need for grid extensions or		
reinforcements to connect the installations to the		
system in a safe manner. A new requirement for		
electricity system operators, both at		
transmission and distribution levels, to publish		
and update information on the grid capacity		
available in their areas of operation would		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
contribute to decision-making by investors on		
the basis of information of grid capacity		
availability within the system and thus to the		
required acceleration in the deployment of		
renewable energy.		
(42) Furthermore, to tackle the problem of		
lengthy reply times on requests for connection		
to the grid, transmission and distribution system		
operators should provide clear and transparent		
information to system users about the status and		
treatment of their connection requests.		
Transmission and distribution system operators		
should-endeavour to provide such information		
within a period of three months from the		
submission of the request.		
(43) During the energy crisis, consumers		
have been exposed to extremely volatile		
wholesale energy prices and had limited		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
opportunities to engage in the energy market.		
Consequently, many households, have been		
facing difficulties when paying their bills.		
Vulnerable consumers and the energy poor are		
the hardest hit <sup>1</sup> , but middle-income households		
have also been exposed to such difficulties. It is		
therefore important to update consumer rights		
and protections, allowing consumers to benefit		
from the energy transition, decouple their		
electricity bills from short term price		
movements on energy markets and rebalance the		
risk between suppliers and consumers.		
(44) Consumers should have access to a wide		
range of offers so that they can choose a		
contract according to their needs. However,		
suppliers have reduced their offers, fixed-price		
contracts have become scarce, and the choice of		

Particular groups are more at risk of being affected by energy poverty or more susceptible to the adverse impacts of energy poverty, such as women, persons with disabilities, older persons, children, and persons with a minority racial or ethnic background.

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
offers has become limited. Consumers should		
always have the possibility to opt for an		
affordable fixed price and fixed term contract		
and suppliers should not unilaterally modify the		
terms and conditions before such contract		
expires. This does not change the fact that		
dynamic price contracts remain essential and		
with an increasing penetration of renewable		
energy sources can help consumers to reduce		
their energy bills.		
(45) When suppliers' do not ensure that their		
electricity portfolio is sufficiently hedged		
changes in wholesale electricity prices can leave		
them financially at risk and, result in their		
failure, passing on costs to consumers and other		
network users. Hence, it should be ensured that		
suppliers are appropriately hedged when		
offering fixed price contracts. An appropriate		
hedging strategy should take into account the		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
suppliers' access to its own generation and its		
capitalisation as well as its exposure to changes		
in wholesale market prices. The existence of		
appropriate hedging strategies can be		
ensured by general rules overseen without		
undertaking a specific review of the positions		
or strategies of individual suppliers.		
(46) Consumers should be able to choose the		
supplier which offers them the price and service		
which best suits their needs. Advances in		
metering and sub-metering technology		
combined with information and communication		
technology mean that it is now technically		
possible to have multiple suppliers for a single		
premises. If they so wish, customers should be		
able to use these possibilities to choose a		
separate supplier notably for electricity to power		
appliances such as heat pumps or electric		
vehicles which have a particularly high		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

		-
Presidency compromise text	Drafting Suggestions	Comments
consumption or which also have the capability		
to shift their electricity consumption		
automatically in response to price signals. For		
this purpose, customers should be allowed to		
have more than one metering and billing		
point covered by the single connection point		
for their premises. The rules for the		
allocation of the associated costs should be		
determined at national level. Some smart		
metering systems may directly cover more		
than one metering point and therefore enable		
customers to have more than one electricity		
supply contract at the same time. Moreover,		
with fast-responding dedicated		
measurementmetering devices which are		
attached to or embedded in appliances with		
flexible, controllable loads, final customers can		
participate in other incentive-based demand		
response schemes that provide flexibility		
services on the electricity market and to

		3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3
transmission and distribution system operators.		
Overall, such arrangements should contribute to		
the increased uptake of demand response and to		- 1//
consumer empowerment allowing them to have		
more control over their energy use and bills,		
while providing to the electricity system		
additional flexibility in order to cope with		
demand and supply fluctuations.		
(47) Due to the increasing complexity of		
energy offers and different marketing practices,		
consumers have often difficulties to fully		
understand what they sign up to. In particular,		
there is a lack of clarity on how the price is set,		
the conditions for the renewal of the contract,		
the consequences of terminating a contract or		
the reasons for changing conditions by the		
supplier. Therefore, the key information on		
energy offers should be provided to consumers		
by suppliers or market participants engaged in		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
aggregation in a short and easily understandable		
manner prior to signing the contract.		
		~ * //
(48) To ensure continuity of supply for		
consumers-in particular in cases of supplier		
failure, Member States should be obliged to		
implement a supplier-of-last-resort regime.		
Such a supplier of last resort appoint suppliers		
of last resort which may be treated as the		
provider of universal service. <u>A</u> That-supplier of		
last resort might be the sales division of a		
vertically integrated undertaking which also		
performs distributionfunctions, provided that it		
meets the unbundling requirements of Article 35		
of Directive (EU) 2019/944 of the European		
Parliament and of the Council. However,		
this does not imply an obligation of Member		
States to supply at a certain fixed minimum		
price.		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
(49) Energy sharing can create resilience		
against the effects of high and volatile		
wholesale market prices on consumers' energy		
bills, empowers a wider group of consumers that		
do not otherwise have the option of becoming		
an active customer due to financial or spatial		
constraints, such as energy poor and vulnerable		
consumers, and leads to increased uptake of		
renewable energy by mobilising additional		
private capital investments and diversifying		
remuneration pathways. With the integration of		
appropriate price signals and storage facilities,		
electricity sharing can help lay the foundation to		
help tap into the flexibility potential of smaller		
consumers.		
(50) Active customers that own, lease or rent	Any payment for sharing of excess	We recommend not limiting the tools used for
a storage or generation facility should have the	production for a price can either be settled	the financial accounting of overproduction to
right to share excess production at a price or	directly between active customers or	peer-to-peer IT solutions. We recommend
<u>free of charge</u> and empower other consumers to		deleting the term peer-to-peer.

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
become active, or to share the renewable energy	automated through a peer-to-peer trading	
generated or stored by jointly leased, rented or	platform.	
owned facilities, either directly or through a		
third-party facilitator. Any payment for		
sharing of excess production for a price can		
either be settled directly between active		
customers or automated through a peer-to-		
peer trading platform. Energy sharing		
arrangement are either based on private		
contractual agreement between active customers		
or organised through a legal entity. A legal		
entity that incorporates the criteria of a		
renewable energy community as defined in		
Directive (EU) 2018/2001 of the European		
Parliament and of the Council or a citizen		
energy community as defined in Directive (EU)		
2019/944 of the European Parliament and of the		
Council can share with their members electricity		
generated from facilities they have in full		
ownership. The protection and empowerment		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
framework for energy sharing should pay		
particular attention to energy poor and		
vulnerable consumers.		
(51) Energy sharing operationalises the		
collective consumption of self-generated or		
stored electricity injected into the grid by more		
than one jointly acting active customers.		
Member States should put in place the		
appropriate IT infrastructure to allow for the		
administrative matching within a certain		
timeframe of consumption with self-generated		
or stored renewable energy for the purpose of		
calculating the energy component of the energy		
bill. The output of these facilities should be		
distributed among the aggregated consumer load		
profiles based on static, variable or dynamic		
calculation methods that can be pre-defined or		
agreed upon by the active customers. Active		
customers engaged in energy sharing are		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
financially responsible for imbalances they		
cause. This should be without prejudice to		
the possibility for active customers to		
delegate their balancing responsibilities to		
other market participants. Sshall be shall-All		
consumer rights and obligations in this		
<b>Directive apply to final customers involved in</b>		
energy sharing schemes. However,		
households with an installed capacity up to		
10.8 kW for single households and up to 50		
kW for multi-apartment blocks should not be		
required to comply with the obligations of		
suppliers.		
(52) Vulnerable customers should be		
adequately protected from electricity		
disconnections and should, as well, not be put in		
a position that forces them to disconnect. The		
role of suppliers and all relevant national		
authorities to identify appropriate measures, in		
		<u> </u>

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
both the short and the long-term, which should		
be made available to vulnerable customers to		
manage their energy use and costs remain		
essential, including by means of close		
cooperation with social security systems.		
(53) Public interventions in price setting for		
the supply of electricity constitute, in principle,		
a market-distortive measure. Such interventions		
may therefore only be carried out as public		
service obligations and are subject to specific		
conditions. Under this Directive regulated prices		
are possible for energy poor and vulnerable		
households, including below costs, and, as a		
transition measure, for households and micro-		
enterprises. In times of crisis, when wholesale		
and retail electricity prices increase		
significantly, and this is having a negative		
impact on the wider economy, Member States		
should be allowed to extend, temporarily, the

Duodidanay aamayamiaa tayt Duodina Sugaytiya		
Presidency compromise text	Drafting Suggestions	Comments
application of regulated prices also to SMEs.		
For both households and SMEs, Member States		
should be temporarily allowed to set regulated		
prices below costs as long as this does not create		
distortion between suppliers and suppliers are		
compensated for the costs of supplying below		
cost. However, it needs to be ensured that such		
price regulation is targeted and does not create		
incentives to increase consumption. Hence, such		
price regulation should be limited to 80% of		
median household consumption for households,		
and 70% of the previous year's consumption for		
SMEs. The Commission should determine when		
such an electricity price crisis exists and		
consequently when this possibility becomes		
applicable. The Commission should also specify		
the validity of that determination, during which		
the temporary extension of regulated prices		
applies, which may be for up to one year. To the		
extent that any such of the measures envisaged		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
by the present Regulation constitute State aid,		
the provisions concerning such measures are		
without prejudice to the application of Articles		
107 and 108 TFEU. The Council, acting on a		
proposal from the Commission, should		
determine by means of an implementing		
decision when an Union-wide electricity price		
crisis exists. The decision should also specify		
the validity of that determination, during		
which the temporary extension of regulated		
prices applies, which may be for up to one		
year. Conferring implementing powers on the		
Council adequately takes into account the		
political nature of the decision to trigger the		
extended possibilities for public interventions		
in price setting for the supply of electricity,		
which requires a delicate balancing of		
different policy considerations, as well as the		
horizontal implications of such a decision for		
Member States.		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
(54) The measures envisaged by the present		
Regulation are also without prejudice to the		
application of Directive 2014/65/EU,		
Regulation (EU) 2016/1011 and Regulation		
(EU) 648/2012.		
(55) Regulation (EU) 2019/942 of the		
European Parliament and of the Council,		
Regulation (EU) 2019/943 of the European		
Parliament and of the Council, Directive (EU)		
2019/944 of the European Parliament and of the		
Council and Directive (EU) 2018/2001 of the		
European Parliament and of the Council should		
be amended accordingly.		
(56) Since the objectives of this Regulation		
cannot be sufficiently achieved by the Member		
States, but can rather be better achieved at		
Union level, the Union may adopt measures, in

Presidency compromise text	Drafting Suggestions	Comments
based remuneration of electricity generated		
from renewable sources;'		
[b] the following point is added:		
'(e) support long-term investments in		
renewable energy generation and enable		
consumers' to make their energy bills less		
dependent on fluctuations of short-term		
electricity market prices, in particular fossil fuel		
prices in the medium to long-term.'		
(2) In Article 2, the following points are added:		
(-)		
'(72) 'peak hour' means an hour with the		
highest electricity consumption combined with a		
low level of electricity generated from		
renewable energy sources, taking cross-zonal		
exchanges into account;		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
(73) 'peak shaving' means the ability of market		
participants to reduce electricity consumption at		
peak hours determined by the transmission		
system operator;		
(74) 'peak shaving product' means a market-		
based product through which market		
participants can provide peak shaving to the		
transmission system operators;		
(75) 'virtual hub' means a non-physical region		
covering more than one bidding zone for which		
an index price is set in application of a		
methodology;		
(76) 'two-way contract for difference' means a		
contract signed between a power generating		
facility operator and a counterpart, usually a		
public entity, that provides both minimum		
remuneration protection and a limit to excess		

Important: In order to guarantee that your comments appear accurately, please do not modify the table format by adding/removing/adjusting/merging/splitting cells and rows. This would hinder the consolidation of your comments.

Presidency compromise text	Drafting Suggestions	Comments
remuneration; the contract is designed to		
preserve incentives for the generating facility to		
operate and participate efficiently in the		
electricity markets and complies with the		
principles set out in Article 4(2) and Article		
4(3), first and third subparagraphs, of Directive		
(EU) 2018/2001;		
(77) 'power purchase agreement' or 'PPA'		
means a contract under which a natural or legal		
person agrees to purchase electricity from an		
electricity producer on a market basis;		
(78) 'market revenue' means realised income an		
electricity producer receives in exchange for the		
sale and delivery of electricity in the Union,		
regardless of the contractual form in which such		
exchange takes place, and excluding any		
support granted by Member States;
